

SUPPLEMENTARY FILES

Supplementary File 1. Sedation, anesthesia and recovery stages defined for *S. aurata* during the exposure to clove oil (CO) and MS-222. Adapted from Ross and Ross (2008).

Induction Stage	Description
<i>Light Sedation</i>	Partial loss of motion, active response to <i>stimuli</i>
<i>Deep Sedation</i>	Erratic movements, ventilation decreased, response to <i>stimuli</i> reduced
<i>Light Anesthesia</i>	Partial loss of equilibrium, analgesia
<i>Deep Anesthesia</i>	Total loss of equilibrium, no reaction to caudal press, ventilation almost ceased
<i>Recovery</i>	Equilibrium, motion, and perception to <i>stimuli</i> completely restored

Supplementary File 2. Specific nucleotide sequences designed as primers for qPCR expression analysis, size of amplified products, concentration of primers used, and efficiencies (E , %) and R^2 of curves assessed in *S. aurata*.

Supplementary File 3. *P*-Values from two-way ANOVA of parameters measured *S. aurata* juveniles. Anesthetics addition during transport (none, clove oil or MS-222), and sampling time (after 6 h of transport or after 18 h of recovery) were considered as factors of variation (n.s., not significant).
