

Supplemental table 2. Age and multivariate adjusted relative risks for incident kidney stones by post-menopausal hormone use among post-menopausal women (1991-2013)

	No hormone therapy use	Current use of hormone therapy	Past use of hormone therapy
Cases	355	426	254
Person-years	217,586	194,875	141,726
Age-adjusted RR	1.0 (ref)	1.21 (1.04 to 1.40)	1.10 (0.93 to 1.29)
MV-adjusted RR	1.0 (ref)	1.11 (0.94 to 1.30)	1.06 (0.90 to 1.26)

Multivariate Model: Adjusted for age, body mass index, race, dietary factors (calcium, magnesium, potassium, sodium, animal protein, oxalate, vitamin D, vitamin C, alcohol, total fluid), supplemental calcium intake, thiazide, history of hypertension, history of diabetes mellitus, time since menopause

Abbreviations: MV, multivariate; RR, relative risk
