

**Hypervascularization in mTOR-dependent focal and global cortical malformations
displays differential rapamycin-sensitivity**

Longbo Zhang, Tianxiang Huang, Shannon Teaw, and Angélique Bordey*

Content: Supplementary figure 1

Supplementary Figure 1: Confocal images of Dextran-AF 488 and tdTomato fluorescence and GFAP immunostaining in coronal sections from mice electroporated with either BFP (control, A) or Rheb^{CA} (B) in addition to tdTomato.
