Supplementary Figures

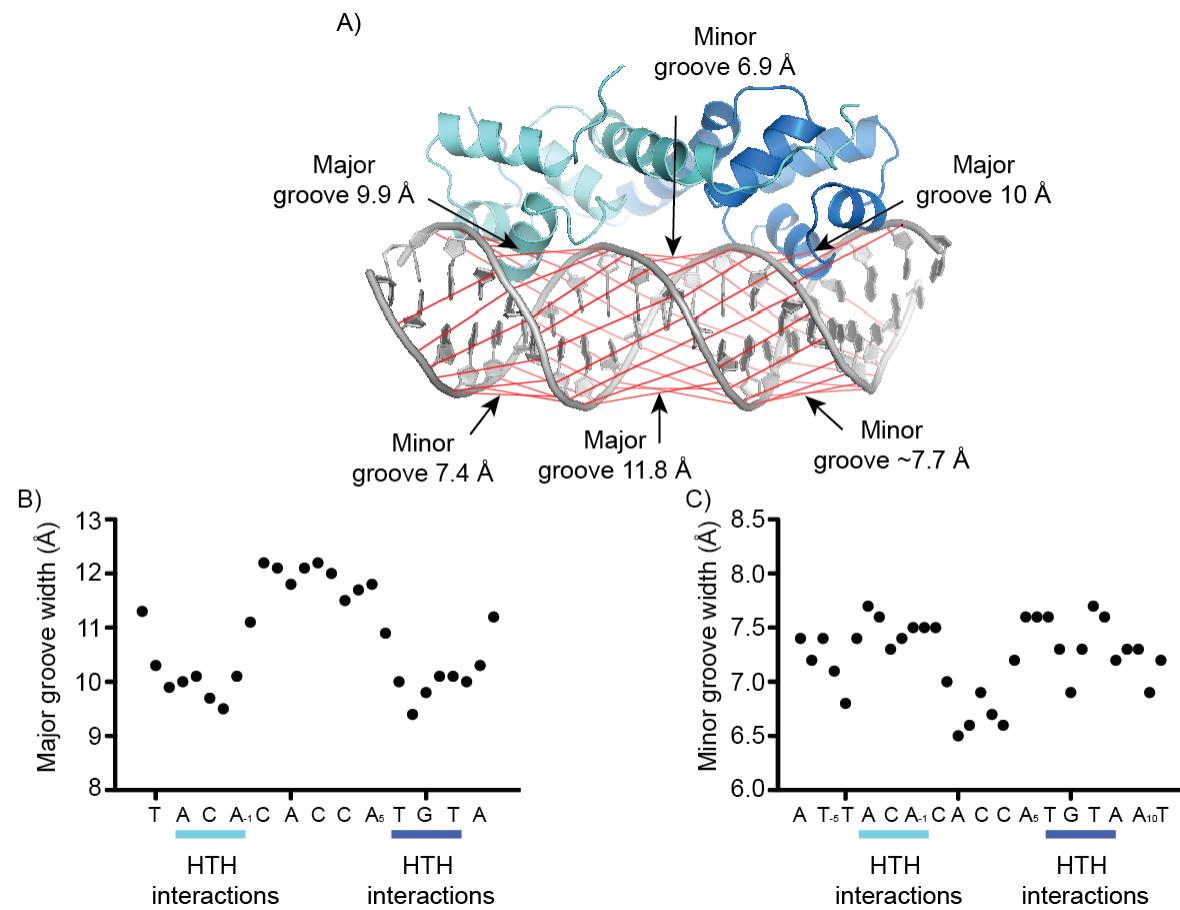

Figure S1. Analysis of *higO2* major and minor groove widths. A) Structure of HigA bound to *higO2* with major and minor groove distances calculated by Curves+ depicted as red lines. B) Major groove and C) minor groove distances calculated by Curves+. The van der Waals surface of the phosphodiester backbone was kept at 2.9 Å when calculating the major and minor groove widths.

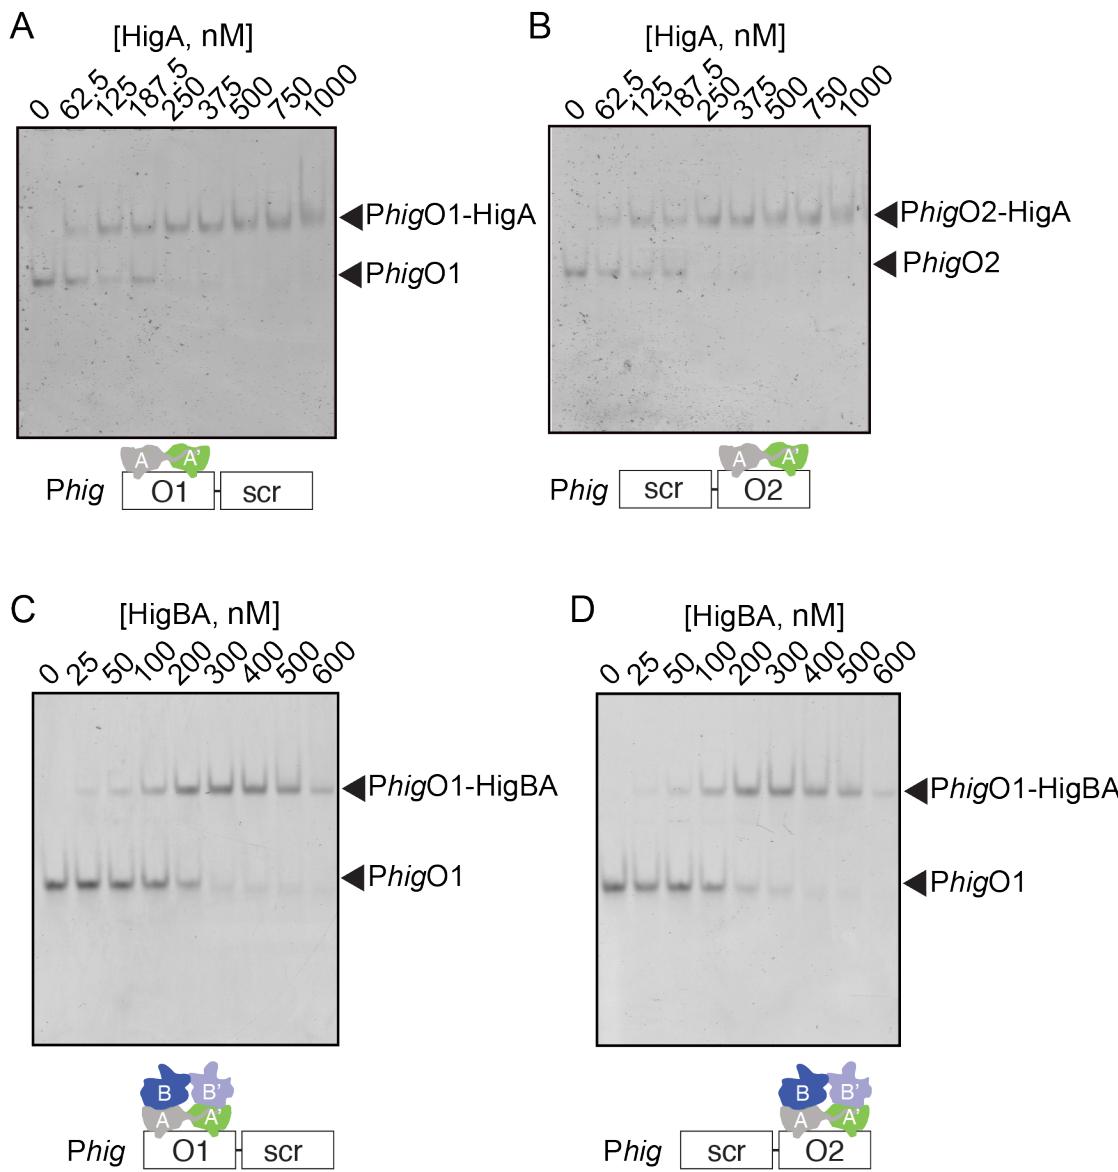

Figure S2. HigA and HigBA recognition of *higO1* or *higO2*. Electrophoretic mobility shift assays of HigA protein and *Phig* containing *higO1* and a scrambled *higO2* (A), HigA protein and *Phig* containing *higO2* and a scrambled *higO1* (B), HigBA protein and *Phig* containing *higO1* and a scrambled *higO2* (C), and HigBA protein and *Phig* containing *higO2* and a scrambled *higO1*. Under each panel is a schematic of the interactions of the HigA dimer and the HigBA complex with *PhigO1-O2*. Each HigA and HigB monomer are labeled as A and A', and B and B', respectively. HigA and HigBA concentrations are shown in nM above each gel.
