eFigure 2. Respiratory Rate and $\text{PaO}_2:\text{FiO}_2$ Ratio

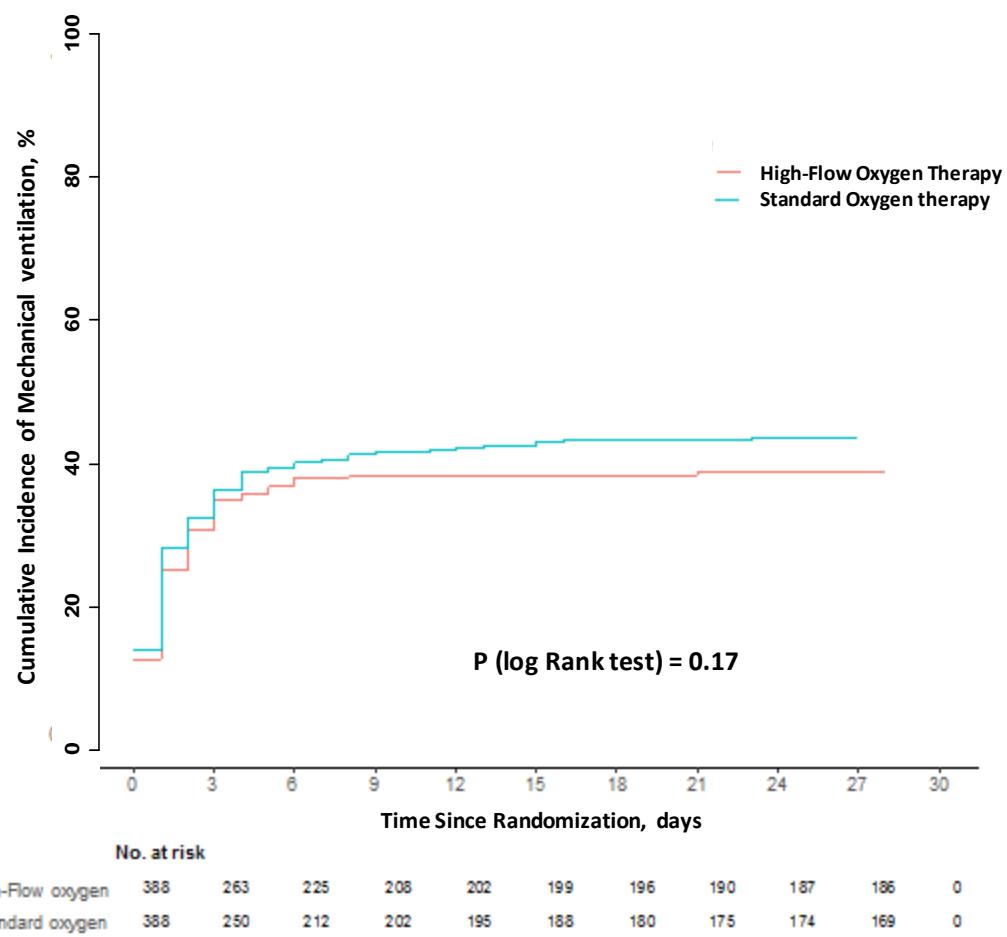

eFigure 3. Patient Comfort and Dyspnea

This supplementary material has been provided by the authors to give readers additional information about their work.

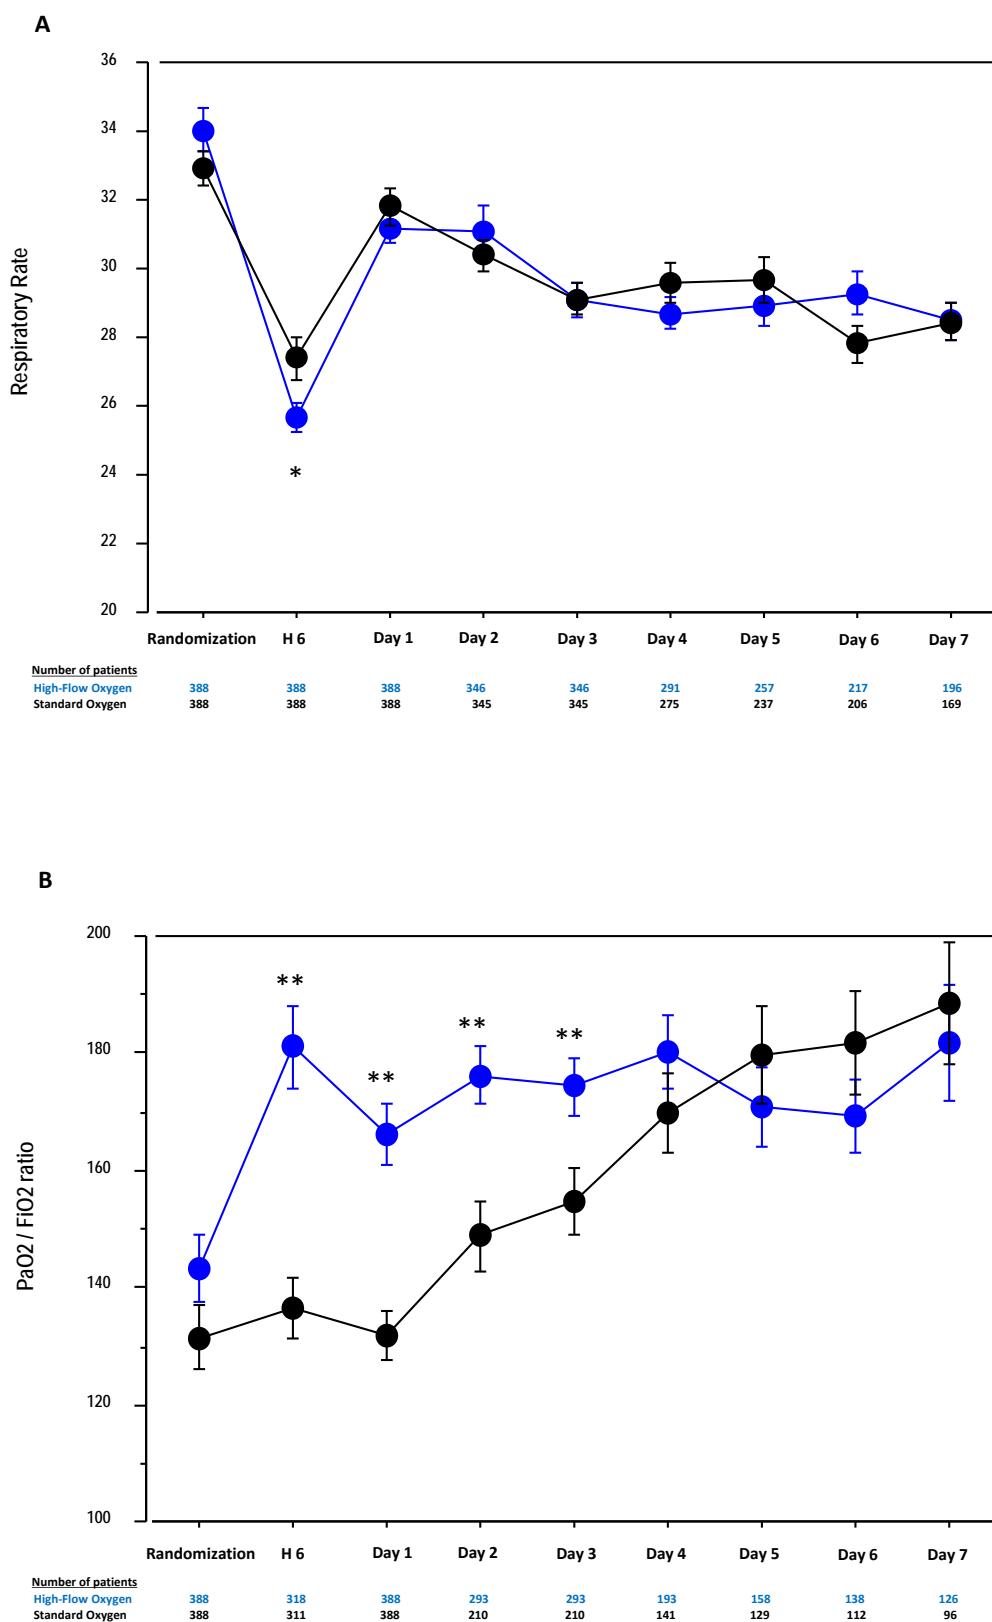

eTable. Oxygenation and Ventilation 6 Hours After Randomization

Number (%) unless otherwise noted	High-flow oxygen therapy, (N=388)	Standard Oxygen, (N=388)
Invasive mechanical ventilation	39 (10.0)	46 (11.8)
Respiratory rate (/min, median [interquartile range]))	25 [20-30]	26 [21-31]
Standard oxygen only	0	342 (88.2)
Oxygen flow (L/min, median [interquartile range]))	50 [50-60]	8 [6-15]
Noninvasive ventilation	0	0
High-flow oxygen therapy in non-intubated patients	349 (100)	0
FiO ₂ (median [interquartile range])	70 [60-90]	/
PaO ₂ /FiO ₂ ratio six hours after randomization (median [interquartile range])	150 [104-230]	119 [86-165]
