

Supplementary Figure S1. The model for description of growth habit related traits in peanut.

LBA, lateral branch angle, the angle between main stem and the first lateral branch. MSH, main stem height, the length of internode from meristematic place of the first pair of the lateral branch on the main stem to parietal lobe. LBL, lateral branch length, the length from the junction with main stem to parietal lobe of the longest first lateral branch. ER, extent radius, the longest distance between main stem and the first lateral branch.
