

## S1 FILE. MODEL EQUATIONS

For each modeled channel  $x$ , equations for steady-state activation and inactivation curves, time constants and current are reported below. When necessary,  $m_x^f$ ,  $m_x^m$ ,  $m_x^s$  ( $h_x^f$ ,  $h_x^m$ ,  $h_x^s$ ) denote fast, medium and slow component, respectively, of activating (inactivating) variable associated to the  $x$  channel, while  $\tau_{m_x}^f$ ,  $\tau_{m_x}^m$ ,  $\tau_{m_x}^s$  ( $\tau_{h_x}^f$ ,  $\tau_{h_x}^m$ ,  $\tau_{h_x}^s$ ) denote the corresponding time constants. Data obtained from these equations are reported in the corresponding panels of Figs 1, 2, 3, and S1, S2, S3, S5 Figs. Fitted values of parameters are reported in S1 Table.
