LTM-treated HCT116
with eIF1 knock down

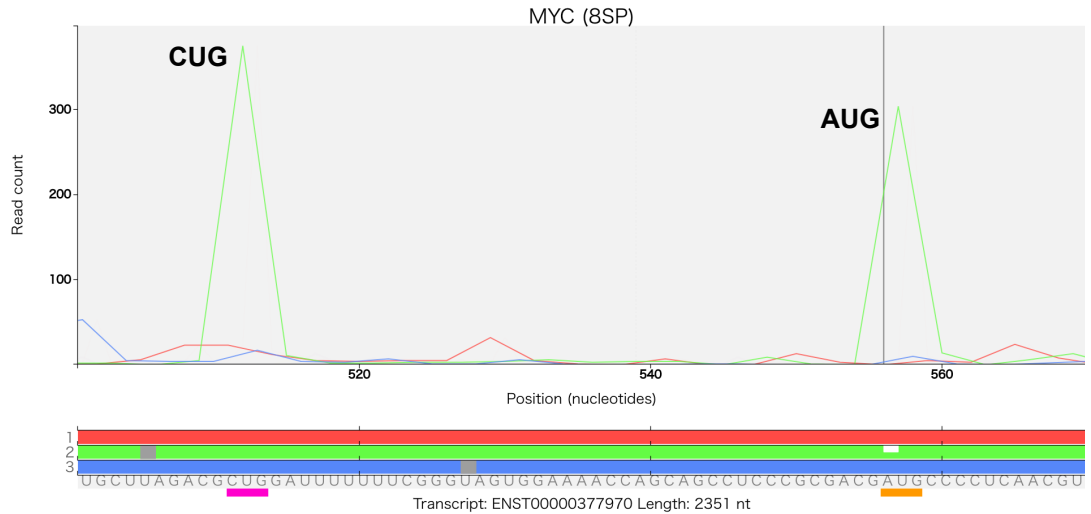

Figure S5. Ribosome-protected profiles of c-Myc start codons in lactimidomycin (LTM)-treated HCT116 cells. Related to Figure 4. (a-c) The ribosome occupancy at CUG and AUG start codons of the *MYC* mRNA derived from LTM-treated HCT116 cells is shown as green peaks. All data of the indicated studies was obtained from the Trips-viz website (<https://trips.ucc.ie/>).
