

Supporting information: L Morawetz, H Köglberger, A Griesbacher, I Derakhshifar, K Crailsheim, R Brodschneider, R Moosbeckhofer; Health status of honey bee colonies (*Apis mellifera*) and disease-related risk factors for colony losses in Austria

**S7 Table. Clinical prevalence of six bee diseases and colony losses.** Correlation between clinical prevalence of six diseases in the observed 1596 colonies and survival of the colonies in summer 2015 (between July 2015 – September 2015) and the winter season 2015/16, respectively. The percentage of dead colonies per group (=row) is given in brackets. Each variable is tested with a Chi<sup>2</sup>-Test or a Fisher's Exact Test (FET), respectively. Diseases without positive cases were not tested and are therefore not shown. Significant results are shaded in gray.

Visit	Observed disease	Symptoms	Summer losses			Winter losses			
			Nº colonies alive autumn visit	Nº colonies dead in summer	Effect on summer losses?	Nº colonies alive spring visit	Nº colonies dead in winter	Effect on winter losses?	
First visit summer 2015 N=1598*	AFB	Negative	1553	39 (2.4 %)	P < 0.001, FET	1422	131 (8.4 %)	---	
		Positive	0	3 (100.0 %)		0	0		
	CBPV	Negative	1552	42 (2.6 %)	P = 1.000, FET	1421	131 (8.4 %)	P = 1.000, FET
