Figure S1. Mito-Akt1 and Mito-dnAkt1 exclusively expressed in mitochondria. Mouse embryonic fibroblasts (MEF) were transduced with adenoviral vector with GFP (Ctrl), Mito-Akt1 or Mito-dnAkt1. Cells were harvested 48 hours post transduction. Mitochondria and cytoplasmic fractions were isolated as described in the method section. Both Mito-Akt1 and Mito-dnAkt1 were His-tag labelled. Actinin was used as cytoplasmic marker, while VDAC1 was used as mitochondrial marker. The original blots used to compile the data in Figure 1C.

Figure S1 (Fig 1 Supplementary Information)

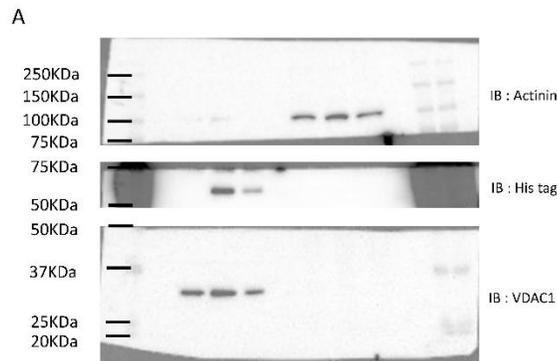

Figure S2. In vivo differentiation of mouse iPSCs (control and Mito-Akt1). Additional photos of teratoma HE stains.

Figure S2 (Fig 3 Supplementary Information)

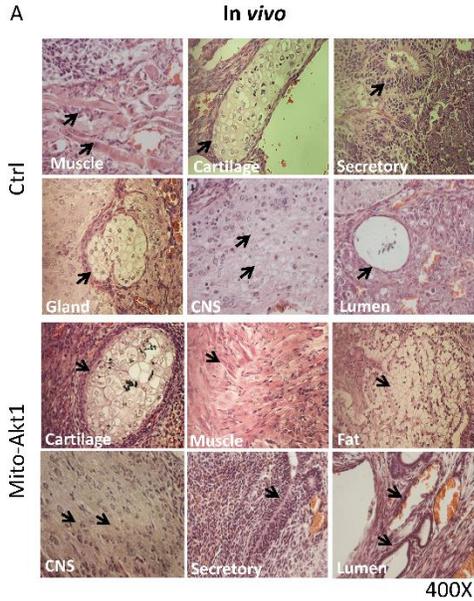

Figure S3. Akt translocation to mitochondria in human embryonic stem cells. The original blots used to compile Fig 5A.

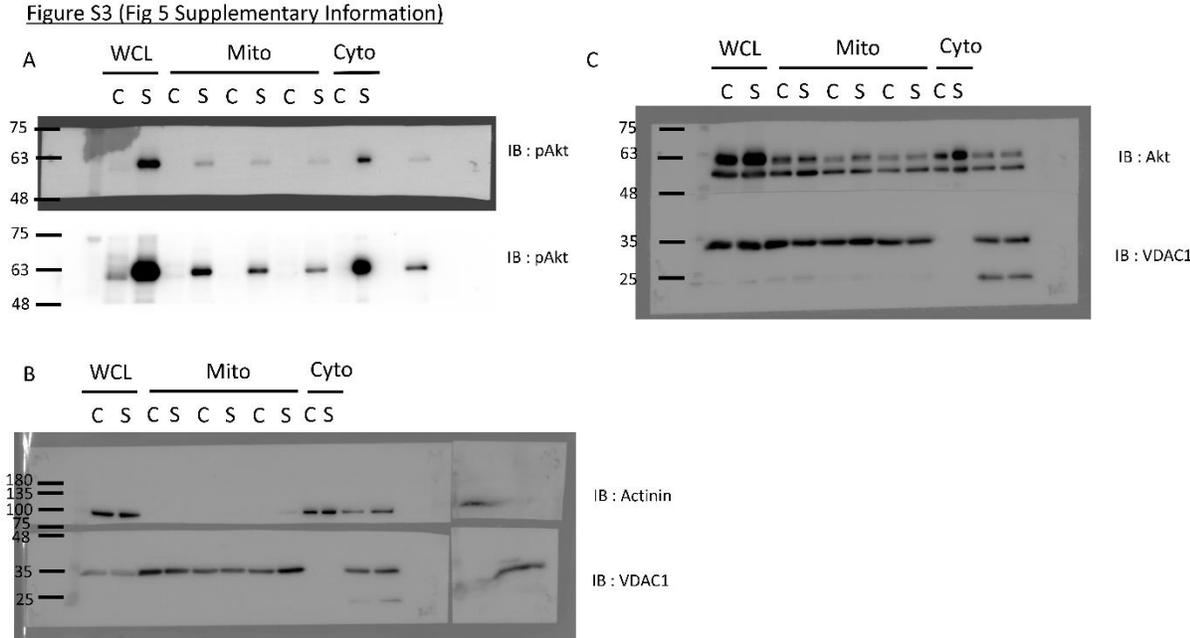

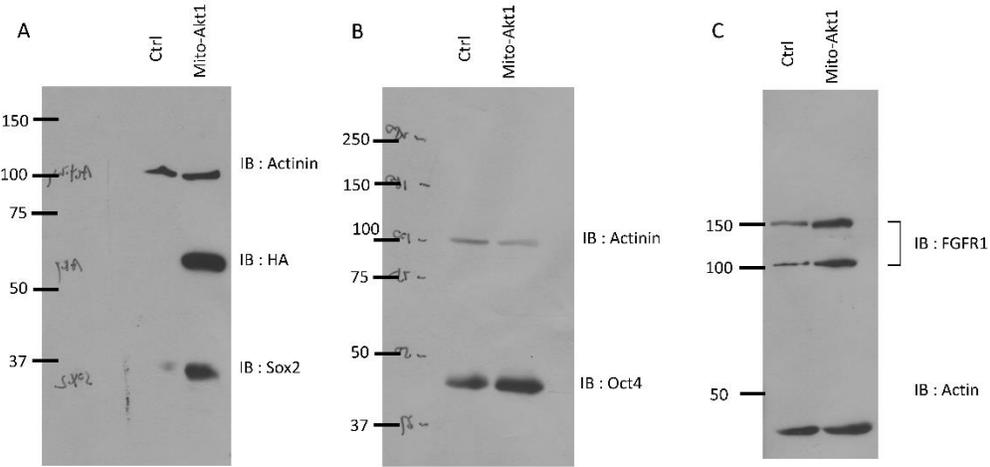

Figure S4. The effects of mitochondrial Akt in human embryonic stem cells. The original blots used to compile Fig 6B.

Figure S4 (Fig 6 Supplementary Information)

Supplementary Table 1. Complete list of the differentially expressed genes in the H9 cells transduced with Mito-Akt1.
