Australian Institute for Suicide Research and Prevention

Dear Collaborator,

Welcome to the worldwide study of definitions and terms of suicidal behaviors. We would appreciate if you would take a moment to answer this questionnaire. Your participation in this study is very important to us.

This study is performed under the auspices of the International Association for Suicide Prevention (IASP), Task Force on Nomenclature and Classification. It aims at better understanding how terms for suicidal behavior vary across countries and cultures. This variability has hampered research efforts for decades. The use of a common language could help implement efficient research that allows comparability and avoids resource-consuming duplication of efforts.

You have been invited to contribute to this study having been identified as an expert in the field of suicidal behavior. We would appreciate if your answers could reflect the professionals' (e.g. researchers, practitioners) most common experience when working in your country.

We expect it will take you approximately 20 minutes to answer this questionnaire.

This research forms a component of an academic program at the Australian Institute for Suicide Research and Prevention (AISRAP), Griffith University. It is to be part of a PhD thesis of which Dr Benjamin Goodfellow is a candidate, Prof. Diego De Leo is the principal supervisor, and Dr Kairi Kolves is the associate supervisor.

The conduct of this research involves the collection, access and/ or use of your identified personal information. The information collected is confidential and will not be disclosed to third parties without your consent, except to meet government, legal or other regulatory authority requirements. A de-identified copy of this data may be used for other research purposes. However, your anonymity will at all times be safeguarded. For further information consult the University's Privacy Plan at http://www.griffith.edu.au/about-griffith/plans-publications/griffith-university-privacy-plan.

Nevertheless, if you choose to, your contribution will be acknowledged by name and professional role in the appropriate section of any document originating from this investigation. We are aware that answering this questionnaire may be time consuming for you and we would like to offer you the opportunity of coauthorship in the main publications originating from this study should you wish to. Please advise us if you do via e-mail.

Once the study results are analysed you can be provided a convenient, plain language summary of results upon request (e.g. via email).

There are no foreseeable risks associated with participation in this research. All research data (survey responses and analysis) will be retained in a password protected electronic file at Griffith University for a period of five years before being destroyed.

Griffith University conducts research in accordance with the National Statement on Ethical Conduct in Human Research. If you have any concerns or complaints about the ethical conduct of this research project, you are encouraged to contact the Manager, Research Ethics on +617 3735 4375 or research ethics@griffith.edu.au. Griffith University ethics reference number for this study is 2017/601.

If you have any questions, please contact the principal supervisor Prof Diego De Leo at the Australian Institute for Suicide Research and Prevention

GENERAL INFORMATION

Do you consent to be acknowledged by name and professional role in any outputs related to this research
○Yes
○No
Please provide your full name, title, and affiliation:
Please type answer in provided space where relevant. Please choose one best answer when several options are provided.
1 Information on site 1.1 What is the name of your country?
1.2 What is the estimated population of your country?
1.3 What is (are) the main language(s) in your country?
2 Information about yourself 2.1 Do you consider yourself a
Olinician
Researcher
OBoth
Other, please specify
2.2 What is your main profession?
O Medical doctor
○ Psychologist
○ Nurse
Opemographer
○ Epidemiologist
Other professional, please specify

NOMENCLATURE, DEFINITIONS, TERMS

You will now read a series of statements regarding definitions and terms. Please choose one *best* statement for each question. Remember, there are no right or wrong answers.

Questions about suicide

In your country, what is the meaning of the word suicide?

5. Please choose one single statement to complete the sentence: Suicide is an act that		
Necessarily leads to death		
May result in survival		
Comments on question 5		
		_
		_
		_
6. Statements regarding <i>intent</i> : please tick <i>Yes</i> if you agree with statement in table, or <i>No</i> if y	ou don't	
Statements	Yes	No
Suicide is an act that can only be done with an intent to die	0	
Suicide is an act that may be done with an intent other than an explicit intent to die	0	
Suicide is an act that may be done with an ambiguous or unclear intent	\circ	\subset
Suicide is an act that may be done with an intent to take the risk of dying	\circ	
Suicide is an act that may be done without explicit intent to die	0	C

Questions on *suicidal ideation*

Please choose one single statement to complete the sentences

In your country, when professionals (e.g. clinicians, researchers) talk about suicidal ideation, the most mon understanding is that when someone who occasionally thinks of suicide when confronted to ess, this person has:
A normal pattern of thinking
Suicidal ideation
O Passive suicidal ideation
Active suicidal ideation
O Death wishes
Reactive suicide ideation
nments on question 16, or suggestions for alternate terms
In your country, when professionals (e.g. clinicians, researchers) talk about suicidal ideation, the most mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt , this person has: A normal pattern of thinking Suicidal ideation
mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt , this person has: A normal pattern of thinking
mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt, this person has: A normal pattern of thinking Suicidal ideation
mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt, this person has: A normal pattern of thinking Suicidal ideation Passive suicidal ideation
mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt, this person has: A normal pattern of thinking Suicidal ideation Passive suicidal ideation Active suicidal ideation
mon understanding is that when someone who continuously thinks of suicide but has no suicidal nt, this person has: A normal pattern of thinking Suicidal ideation Passive suicidal ideation Active suicidal ideation Persistent suicide ideation

8. In your country, when professionals (e.g. clinicians, researchers) talk about suicidal ideation, the most ommon understanding is that when someone who hopes for death but has no thoughts of killing him- or erself, this person has:
A normal pattern of thinking
O Suicidal ideation
O Passive suicidal ideation
Active suicidal ideation
O Death wishes
omments on question 18, or suggestions for alternate terms
9. In your country, when professionals (e.g. clinicians, researchers) talk about suicidal ideation, the most ammon understanding is that when someone hopes for death by killing him- or herself , this person has: A normal pattern of thinking
Suicidal ideation
O Passive suicidal ideation
O Active suicidal ideation
O Death wishes
omments on question 19, or suggestions for alternate terms

Questions on suicidal ideation or behavior

20. In your country, when professionals (e.g. clinicians, researchers) talk about suicidal behavior or ideation,

Please choose one single statement to complete the sentences

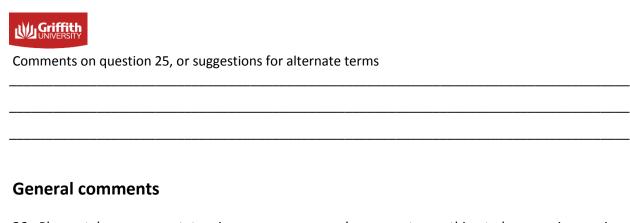

the most common understanding is that when someone states suicidal intention without engaging behavior, this person:	in
Is engaging in suicidal behavior	
Is experiencing suicidal ideation	
Is experiencing passive suicidal ideation	
Is experiencing active suicidal ideation	
O Has made a suicide attempt	
O Has made a suicide threat	
Has made a suicide communication	
O Has made a suicide plan	
Is engaging in preparatory suicidal behavior	
Has made an interrupted suicide attempt	
Has made an aborted suicide attempt	
Comments on question 20, or suggestions for alternate terms
