Supplementary figure S1 : Streptozotocin-induced hyperglycemia in CD1 mice. CD1 mice were inoculated with 45 mg of STZ/Kg intraperitoneally. Each mouse is represented by a symbol (n=5). Blood was collected from tail vein until day 20 post-infection. The blood glucose level was measured using a glucometer. The results are expressed as mg/dl. 300 mg/dl is the threshold for hyperglycemia
