

Figure S1. Rosiglitazone treatment has no impact on weight loss during influenza and influenza-MRSA super-infection. WT male, 6–8 weeks old mice were infected with 100 pfu of influenza or influenza and MRSA super-infected as described in methods ($N = 7-8$ per group). Mice were treated with rosiglitazone or vehicle (DMSO) from day 0-6 days post-infection and harvested on day 7 post-infection. **(A)** Percentage weight loss was measured during influenza infection, **(B)** influenza-MRSA super-infection. Data are represented as mean \pm SEM, two tailed Student's t test, ns-not significant.
