**Figure S1.** Structural 3D ribbon diagrams modeling of omptin protein family based on the: (A) original amino acid sequence of Pla, OmpT, OmpP, PgtE, and SopA. The four immune-reactive clusters colored in blue (epitope no. 1), black (epitope no. 2), red (epitope no. 3), and green (epitope no. 4). All models were generated with Swiss-PdbViewer/DeepView v. 4.1. (B) B-cell linear epitope residues of the Pla, OmpT, OmpP, PgtE, and SopA. (C) B-cell conformational epitope residues of Pla, OmpT, OmpP, PgtE, and SopA.

**Table 1S.** Predicted antigenic and allergenic results of the B-cell linear omptins.
