<i>hpaP::hpaP⁺</i>	0.1671	<0.0001

Supplementary Fig. S1

The *hpaP* mutant is strongly reduced in virulence on tomato. Kaplan-Meier survival analysis of tomato plants inoculated with *Ralstonia solanacearum* wild-type strain (red squares), *hpaP* mutant (green stars) and the complemented strain *hpaP::hpaP⁺* (blue circles). Each strain was root inoculated on 24 tomato plants. *P*-value from Gehan-Breslow-Wilcoxon tests are shown below the graph. Red boxes indicate *P*-values of <0.01. Data were pooled from three independent experiments.
