**S6 Fig.** Confirmation of transfection of HPV-16 by RT-PCR. RT-PCR revealed significant increase of E6-E7 mRNA levels after transfection of HPV to CAL27 (A) and FaDu cell lines (B). CTR, non-transfected cell-line; HPV, transfection with HPV-16 oncogene; RT-PCR, reverse transcriptase-polymerase chain reaction; 24H, 24 hours of culture; 48H, 48 hours of culture.
