SFigure 1: Group difference of temporal variability of the dynamic fALFF and ReHo. Temporal variability of the dynamic fALFF and ReHo between schizophrenic and healthy subjects were identified using two-sample t tests. The significance level was set $P_{FDR} < 0.05$. (a) the increased dynamic fALFF in schizophrenic subjects compared to healthy controls. (b) the enhanced dynamic ReHo in patients with schizophrenia.

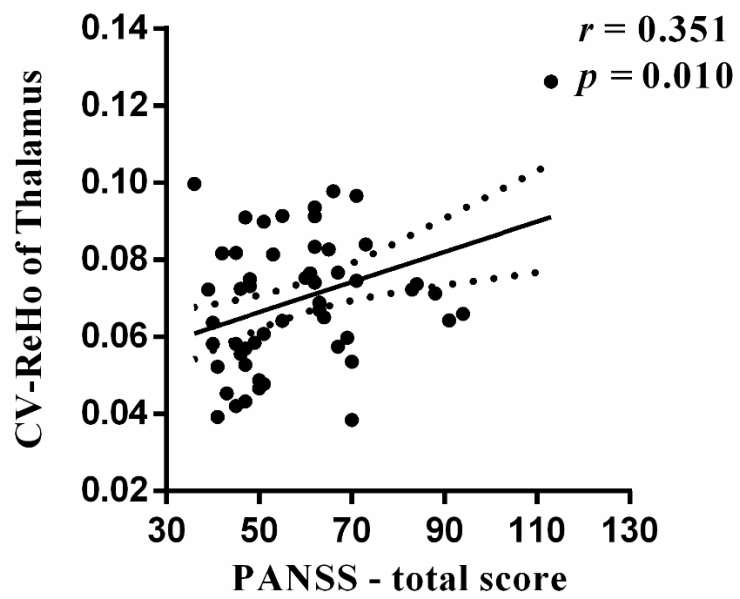

Figure 2: The PANSS-total score was positively related with CV score of thalamus region in schizophrenic subjects.
