Supplementary Figure S1

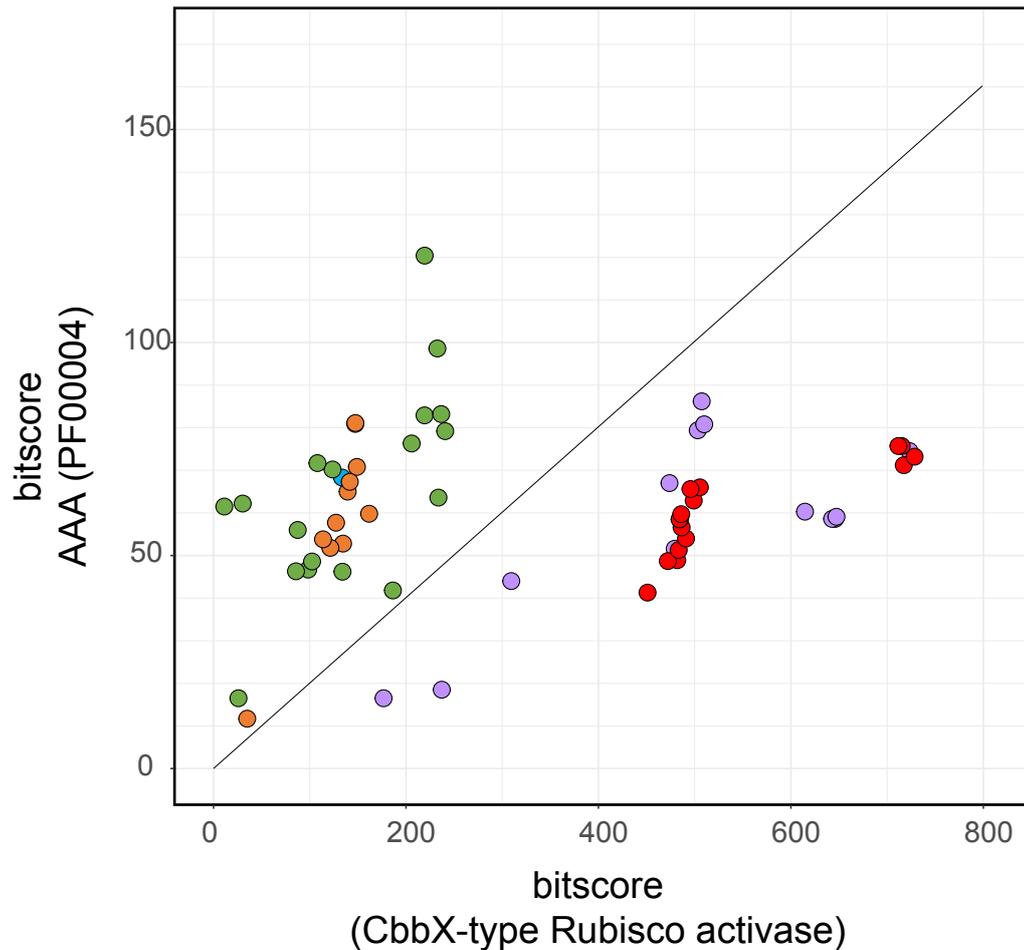

Supp Figure 1: Phylogenetic tree with transcript numbers and chlorophyte cluster labels. The number of transcript scaffolds assembled for each of the samples in the tree is indicated in the heatmap. Long vertical lines below the heatmap demarcate the five major clades. Shorter lines demarcate the 13 clusters of Chlorophyta defined as described in Methods. Clusters are labeled A-M.

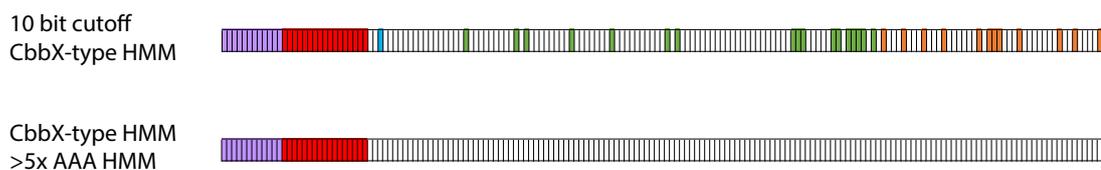

Supp Figure S2: This is essentially a close-up of the Chromista region from Fig 1A in the paper, and Fig 1B, HMMs iv and vi. This closeup provides the OneKP codes for the 12 chromista samples. Dashed lines help distinguish the three main clades as defined by the tree. These clades correspond very closely to the traditional taxonomic classification, given by the labels at the bottom. (There is only one sample - EBWI, indicated by an asterisk - whose placement is suspect). Note that all six samples that have hits to EC 1.14.19.2 (a fatty acid desaturase) are in the clade labeled as Haptophyta; conversely all of the samples in the clade have the sequence. Oxaloacetate decarboxylase is absent in only three of the twelve Chromista, but all three of the samples in which it is missing are cryptophytes.

A

B

Supp Figure S3: Alternative criteria for defining the presence of CbbX-type Rubisco activase sequences. (A) Plot of all samples for which a hit was found to an HMM for CbbX-type Rubisco activase at a threshold of 10 bits. The y-axis value is the bit-score for the same scaffold run against the Pfam HMM PF00004 (AAA). Samples are color coded in the same way as figures in the manuscript: purple are Chromista; red are rhodophytes; green are chlorophytes; and orange are streptophyte algae. The diagonal line has an intercept of 0 and a slope of 0.2; points to the right of this line have bitscores for CbbX-type Rubisco activase that are at least 5x higher than for the AAA HMM. (B) Representation of CbbX-type positive samples based on only the 10 bit threshold criterion (top) and for the criterion used in the paper, which is the same 10 bit threshold, plus a bitscore for CbbX-type HMM at least 5-fold higher than for the AAA HMM.

Supplementary Table S1

Data in columns A-I were downloaded from http://www.onekp.com/samples/list.php .								additional annotations

Notes from OneKP site:

- 1 weak RNA
- 2 originally submitted as D. primolecta, but appears to be identical to ZDIZ/CCMP 364
- 3 Originally submitted as UTEX LB 1644 D. salina, but the sequence was matched to S. viridis
- 4 was Chloromonas perforata (see doi:10.1111/jpy.12343)
- 5 was Pleurastrum insigne (see doi: 10.1111/jpy.12343)
- 6 originally recorded as Hormidiella sp.
- 7 weak RNA
- 8 was synonym Neochloris oleoabundans
- 9 was originally Nannochloropsis oculata
- 10 resent; few big contigs

1: Pfam code:name or EC number from which HMM was generated; for the four HMM names that are not prefaced by PF (Pfam) or ec (constructed by us from KEGG equence alignments for that EC number) the HMM was constructed from sequence alignments obtained using PSI-BLAST, from sequences described in the text

2: Thes are subjective and in some cases fairly arbitrary categories

3: These are the Fisher exact test p-values for the distribution of HMM hits across the five major clades or the best of the branches along the Chlorophyte lineage. Coloring is from white (p-val = 1) 0 to darkest green (p-val is the lowest in that column. Colors are interpolated by Excel based on the values shown in the cells.

Supplementary Table S4: strains analyzed for DGTS by mass spectrometry

1kP_Sample	species	strain name	media	DUF3419 positive?	DGTS by MS?
IRZA	<i>Proteomonas sulcata</i>	CCMP 704	f/2-Si	+	+
NMAK	<i>Pavlova lutheri</i>	UTEX LB 1293	F/2 media	+	+
OBUY	<i>Porphyridium cruentum</i>	UTEX 161	F/2 media	-	-
RHVC	<i>Dunaliella salina</i>	SAG 42.88	ASP-12 + soil extra	+	+
QRTH	<i>Chlorococcum microstigmaticum</i>	SAG 11.43	Waris-H	+	+
PRIQ	<i>Chlorococcum oleofaciens</i>	SAG 30.93	Waris-H	+	+
ZLQE	<i>Stephanosphaera pluvialis</i>	SAG 78-1a	Waris-H	+	+
VALZ	<i>Chlamydomonas noctigama</i>	SAG 36.72	Waris-H	+	+
JRGZ	<i>Chlamydomonas moewusii</i>	SAG 1.98	Waris-H	+	+
IHOI	<i>Chloromonas oogama</i>	SAG 9.79	Waris-H	+	+
BCYF	<i>Chlamydomonas cribrum</i>	SAG 13.72	Waris-H	+	+
IRYH	<i>Heterochlamydomonas inaequalis</i>	SAG 4.75	Waris-H	+	+
LBRP	<i>Chloromonas reticulata</i>	SAG 26.86	Waris-H	+	+
VJDZ	<i>Botryococcus sudeticus</i>	UTEX 2629	3N-BBM-V media	+	+
PZIF	<i>Scenedesmus dimorphus</i>	UTEX 746	3N-BBM-V media	+	+
MWAN	<i>Chlorella minutissima</i>	UTEX 2219	F/2 media	+	+
ETGN	<i>Botryococcus braunii</i>	UTEX 2441	3N-BBM-V media	-	+
EEJO	<i>Neochloris oleoabundans</i>	UTEX 1185	3N-BBM-V media	-	-
JQFK	<i>Picochlorum atomus</i>	UTEX LB 1998	F/2 media	+	+
HVNO	<i>Tetraselmis chui</i>	UTEX LB 232	F/2 media	+	+
PUAN	<i>Pedinomonas tuberculata</i>	CCAP 1965/2	Waris-H	+	+
AYPS	unidentified species	CCMP 1205	ASP-12	+	+
TGNL	<i>Picocystis salinarum</i>	CCMP 1897	ASP-12	+	-
HYHN	<i>Prasinoderma coloniale</i>	CCMP 1413	ASP-12	+	+
KYIO	<i>Mesostigma viride</i>	NIES 476	Waris-H	-	-
MXEZ	<i>Pycnococcus provasolii</i>	CCMP 1203	ASP-12	+	+
