

Supplemental Figure 2. Bacterial classes (A) and fungal orders (B) identified as indicator taxa significantly ($q < 0.05$) associated with different locations. The size of each circle defines the association strength (indicator value) of a particular taxa with the different location, such as 0-0.25: not characteristic; 0.25-0.5: weakly characteristic; 0.5-0.75: characteristic; 0.75-1.0: strongly characteristic. The bars represent the cumulative relative abundance of each indicator taxa in all the samples

A

Bacterial 16S rRNA

B

Fungal ITS
