

Supplementary Data

SUPPLEMENTARY FIG. S1. Group composite fMRI activation map for the verb generation task (on>off) ($N=17$). The contrast is FWE-corrected $p < 0.05$. Axial slices $Z = -72$ to 108 , two slides are incremental. Hotter color is represented in red color, scale: $t = 0$ to 5 . Neurological orientation (L, left; R, right). fMRI, functional magnetic resonance imaging; FWE, familywise error rate.
