

Table S3. Influence of cyclosporine and *SLCO1B1* c.521T>C genotype on the Cmax and AUC of pravastatin alone or pravastatin isomer (3'α-hydroxy pravastatin) alone in volunteers. Cmax and AUC of pravastatin alone or its isomer alone when administered with placebo and cyclosporine are shown. Data are presented as mean ± standard deviation for each genotype group and all subjects combined. Paired t-test was used to determine the significance of Cmax and AUC between the treatment groups. The numbers in the parentheses represent the fold increase of (i) pravastatin plus the 3'α-hydroxy pravastatin; (ii) pravastatin only; and (iii) 3'α-hydroxy pravastatin levels, in pravastatin plus CSA group over pravastatin plus placebo. The significant p-values are: *p<0.05; **p<0.005; *** p<0.0005; **** p<0.0001.
