^aProblem-solving skills was measured using the Social Problem-Solving Inventory-Revised's rational problem solving subscale (D'Zurilla et al., 2002).

^bNegative urgency was measured using the UPPS-P Impulsive Behavior Scale's negative urgency subscale (Lynam, Smith, Whiteside, & Cyders, 2006).

^cDepression was measured using the Beck Depression Inventory-II (Beck, Steer, & Brown, 1996). The suicidal ideation item was omitted from the parcels to avoid a confound with the suicidal ideation latent variable.

^dAlcohol problems was measured using the Young Adult Alcohol Consequences Questionnaire (Read, Kahler, Strong, & Colder, 2006).
