Supplemental Figure 2. Global lipidomic analysis of ventricles from nonfasting 6 months old male *Bsc12^{+/+}* and *Bsc12^{-/-}* mice by shotgun mass spectrometry. (A-B) Pie chart representing the distribution of summed ion abundances of glycerolipid, glycerophospholipid, sphingolipid, nonesterified fatty acid (NEFA), and sterol lipid classes, for all lipids detected in (A) *Bsc12^{+/+}* and (B) *Bsc12^{-/-}* ventricles. The area of each pie chart is proportional to the total lipid ion abundance normalized to tissue weight. (C) The total lipid ion abundances for glycerophospholipids including phosphatidylcholine (PC), phosphatidylethanolamine (PE), phosphatidylinositol (PI), cardiolipin (CL), phosphatidylserine (PS), phosphatidylglycerol (PG) and phosphatidic acid (PA). (D) The lipid ion abundances for 22 CL lipid species. All the lipid ion abundances in C-D were normalized to tissue weight. n=5 with each pooled from 3 animals. *: P<0.05; **: P< 0.005. Multiple t tests after correction using the Holm-Sidak method.

Supplemental Figure 3. BSCl2 deletion did not induce mitochondrial biogenesis, oxidative stress and ceramide-mediated lipotoxicity in hearts. (A-B) Mitochondria DNA copies/nucleus and protein expression of all five electron transport chain (ETC) complexes including NDUFB8 (complex I), SDHB (complex II), UQCRCII (complex III), MTCO1 (complex IV) and ATP5A1 (complex V) as detected by OXPHOS antibody cocktails in hearts of 3M and 6M old nonfasting male *BscI2*^{+/+} (+/+) and *BscI2*^{-/-} (-/-) mice. n=4-6/group.
