

SUPPLEMENTAL FIGURE 2

Supplemental Figure 2. Percent of genetic material genotyping as C57BL/6 in cryAB R120G +/- mice. Mouse genomes were analyzed by SNP analysis (DartMouse). Controls included a Jackson Labs C57BL/6 mouse control (green) and a 129Sv mouse control (orange) run with this analysis. Percent of mixed C57BL/6 and 129Sv background is shown in purple. A representative mouse from the cryAB R120G +/- mouse colony (mouse #1396) was found to have 98.68% genetic material from C57BL/6 strain.
