

Supplementary Figure 1. PC3 cells were transfected with increasing amounts of DRAK1 plasmid or 10 μ M of 2-5A. (A) After 24 h, the levels of DRAK1 mRNA were measured by RT-PCR using DRAK1-specific primers and normalized to GAPDH mRNA levels, or (B) Apoptosis % was determined by trypan blue exclusion. Data shown are mean values \pm SD from experiment performed in triplicate. Student's *t* test was used to determine *p* values. **p* < 0.01, not significant (ns).
