Figure S1. Quantification from smFISH of mRNA molecules of *Fcgr1*, *Fcgr2b*, and *Fcgr3* in mouse DRG. Related to Fig. 4. Scale bar represents 100 μm . *Fcgr1-3* molecules are plotted per individual cell according to neuronal area and showed as intensity of color gradient. *Fcgr1* is shown expressed at the highest level.

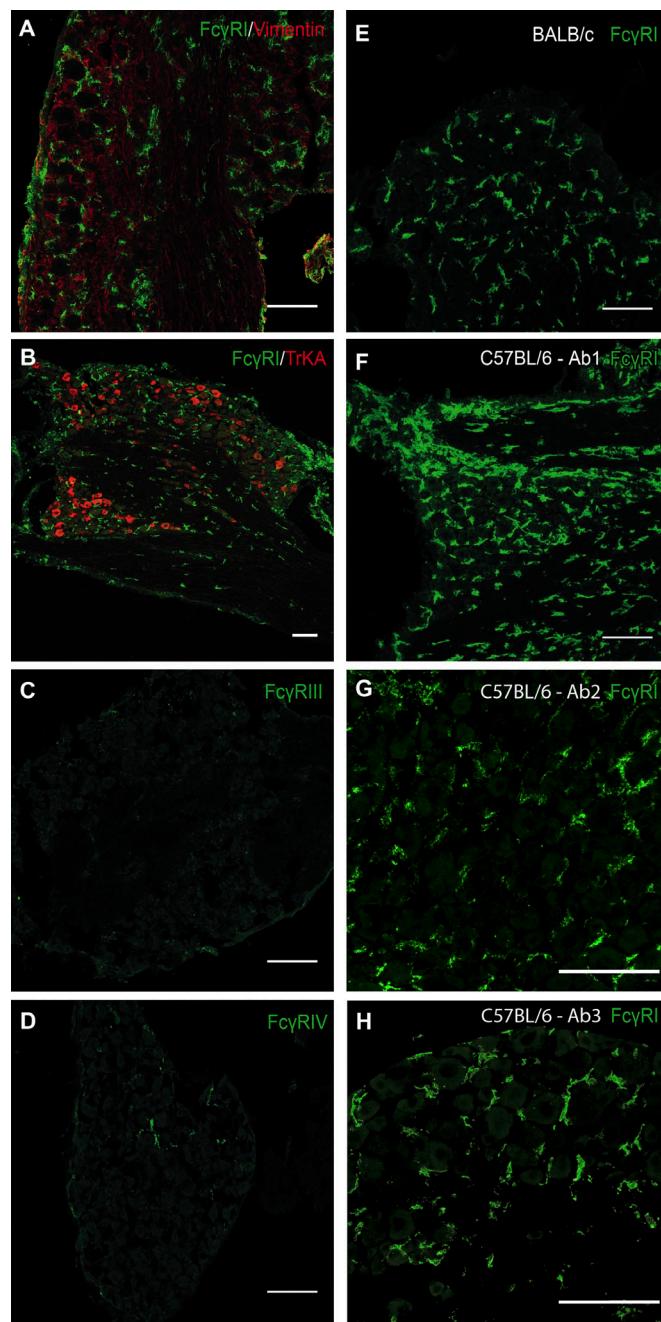

Figure S2. Fc γ RI expression in BALB/c and C57BL/6 mice DRGs and lack of expression of Fc γ RIII and Fc γ RIV in mouse DRG. Related to Fig. 5. **(A and B)** IHC shows lack of colocalization between Fc γ RI staining and vimentin and TrkA. **(C and D)** No immunoreactivity for Fc γ RIII and Fc γ RIV was detected in BALB/c mouse DRG. **(E)** Fc γ RI immunoreactivity is present in resident macrophages of BALB/c mouse DRG. **(F–H)** Antibodies from three different sources (M.S. Cragg, Sino Biological, and R&D Systems) showed Fc γ RI immunoreactivity in resident macrophages in DRGs from C57BL/6 mice. Scale bars represent 100 μ m.

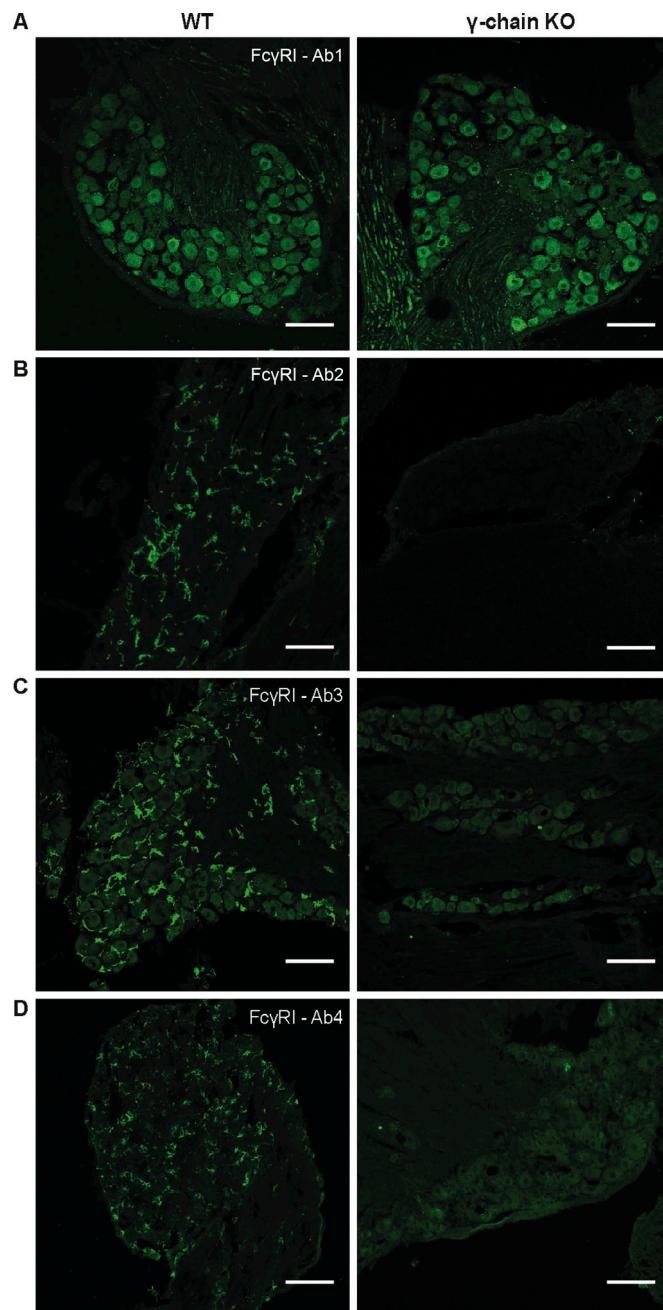

Figure S3. Specificity control of several anti-Fc γ RI antibodies used for IHC in mouse DRG. Related to Fig. 5. **(A)** Fc γ RI immunoreactivity is present in neuronal cell bodies of BALB/c mouse DRG when using an antibody from Santa Cruz Biotechnology, but the signal is retained in DRGs from Fc γ -chain $^{-/-}$ mice, indicating nonspecific binding. **(B-D)** Antibodies from three different sources (M.S. Cragg, Sino Biological, and R&D Systems) showed Fc γ RI immunoreactivity in resident macrophages in BALB/c mouse DRGs, and the signal is absent in DRGs from Fc γ -chain $^{-/-}$ mice, indicating specific binding. Scale bars represent 100 μ m.

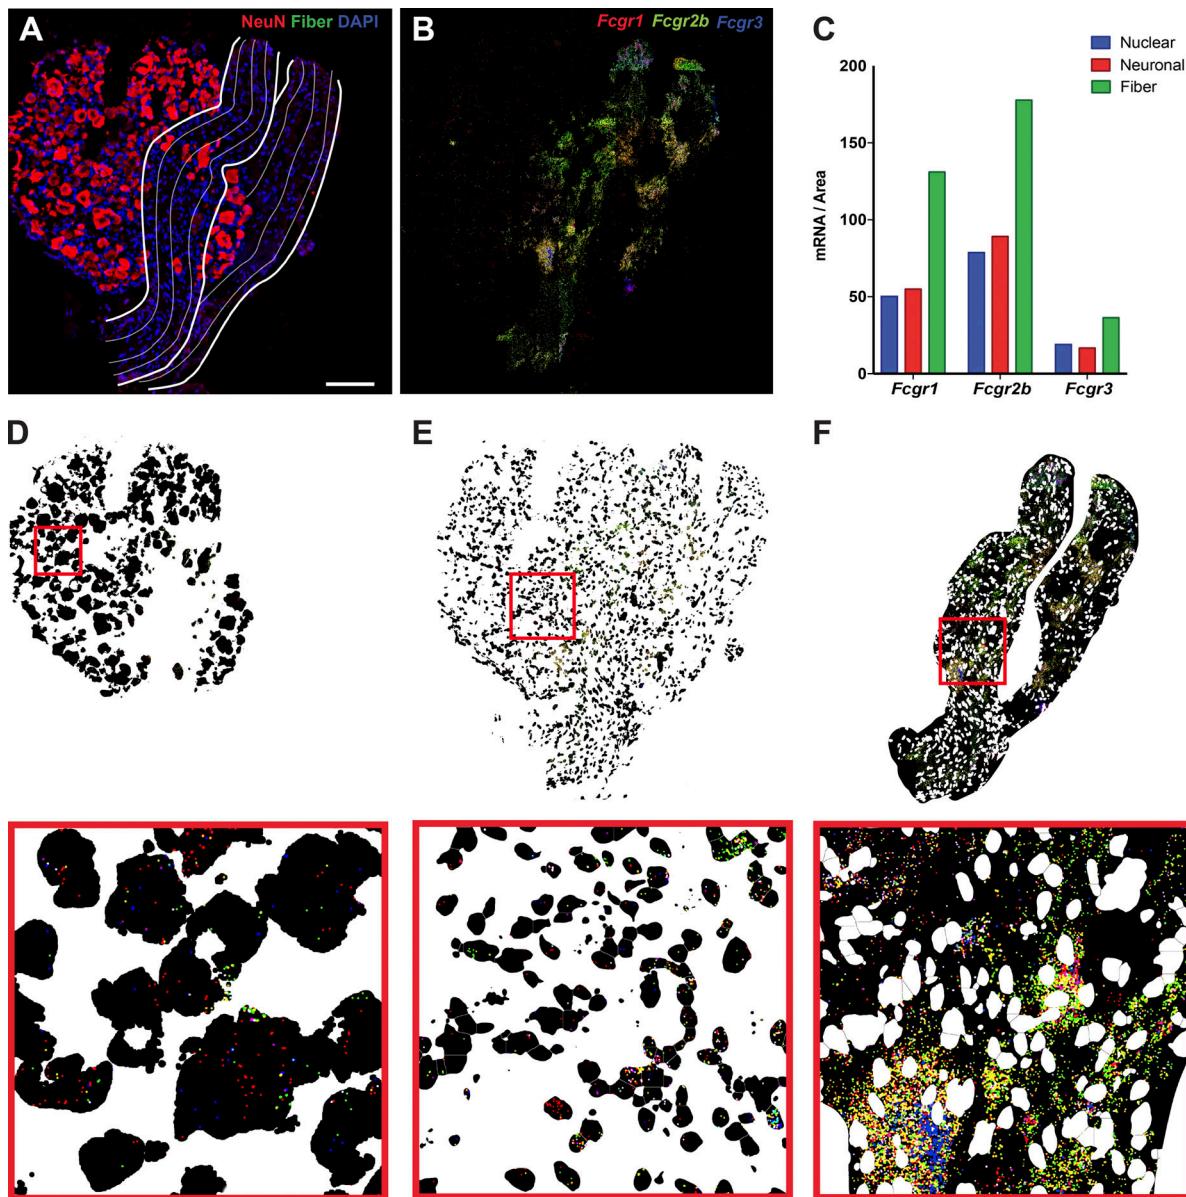

Figure S4. smFISH quantification of *Fcgr1*, *Fcgr2b*, and *Fcgr3* mRNA molecules in neuronal, nuclear, and fiber tract areas of mouse DRGs. Related to Figs. 4 and 5. **(A)** Representation of neuronal (*NeuN*), nuclear (*DAPI*), and fiber tract (nonneuronal and nonnuclear) areas in mouse DRG. **(B)** smFISH detection of *Fcgr1*-3 in mouse DRGs. **(C-F)** Quantification of *Fcgr1*-3 in neuronal, nuclear, and fiber tract areas. *Fcgr1*-3 are most expressed in the fiber tracts of mouse DRG. Panels D, E, and F are masked versions of B, representing the neuronal, the nuclear, or the fiber regions of the whole DRG, respectively. Scale bar represents 100 μ m.
