

3. Reaction Time Distributions

Younger Adults

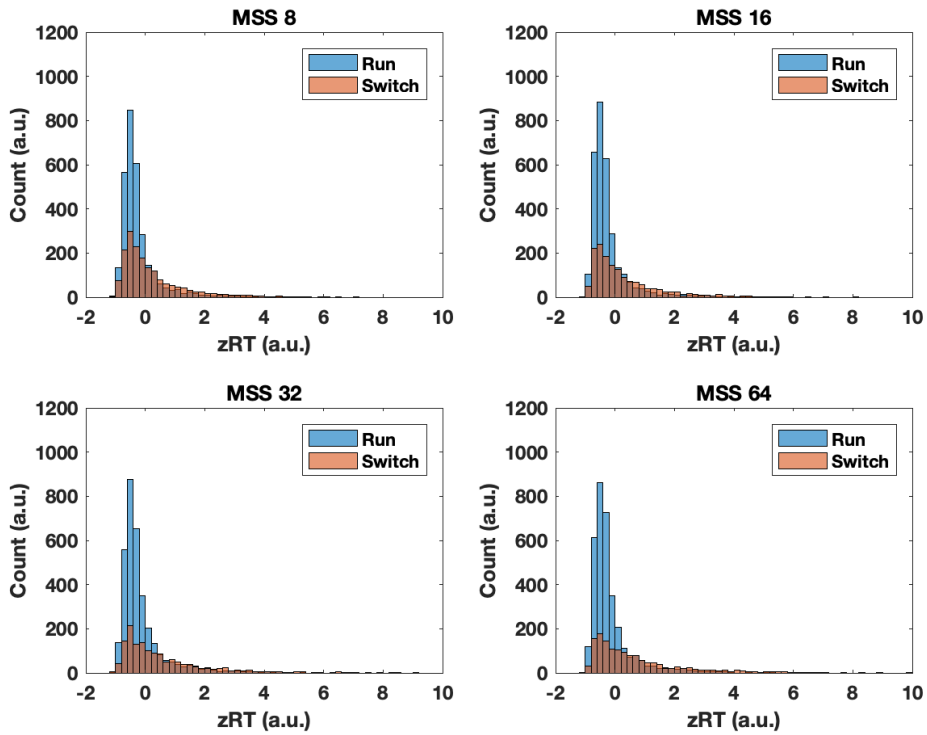

Older Adults

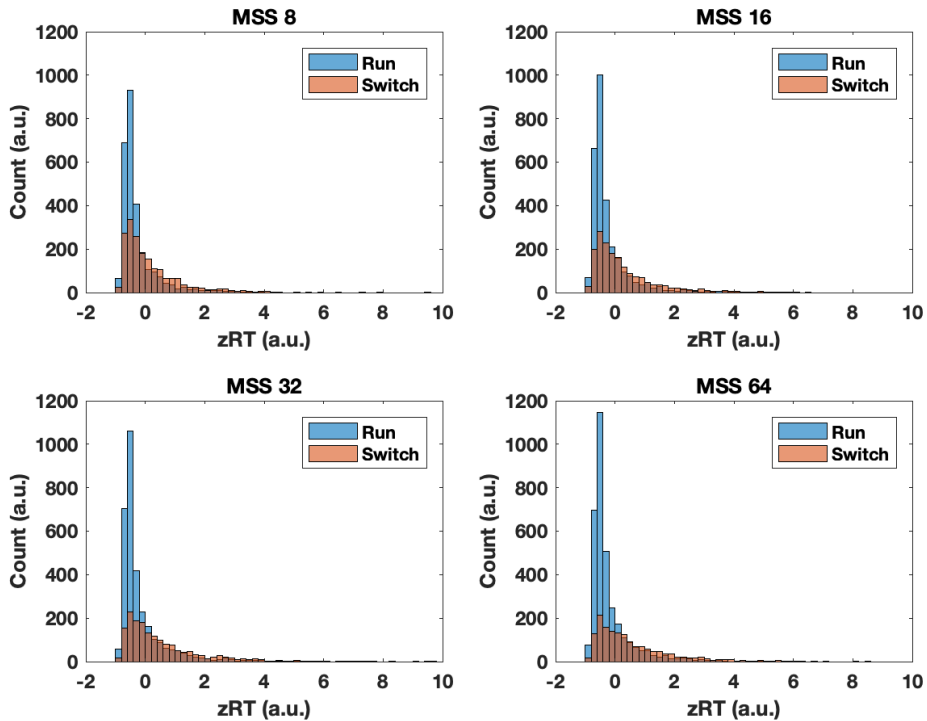

Distributions of reaction times (RT). For each of the four memory set size (MSS) conditions (8, 16, 32, 64), distributions are plotted for run and switch trials for younger adults and older adults. Histograms were computed with bin sizes of 0.2 s.

Younger Adults

Older Adults

Distribution of z-transformed RT (zRT). For each of the four memory set size (MSS) conditions (8, 16, 32, 64), distributions are plotted for run and switch trials for younger adults and older adults. Histograms were computed with bin sizes of 0.2.
