

Online Resource 10: Expression analysis of 15 selected CarB3 genes in response to ABA (100 μ M) treatment at different time points through qRT-PCR. Values on Y-axis denote relative expression values. Error bars indicate standard deviation (\pm SD) of three biological replicates each calculated from three technical replicates. Asterisks indicate significant difference between control and other treated samples (t test, *P<0.05, **P<0.01).
