<b>Model c-statistic</b>	c=.67	c=0.71	c=.70	c=0.77	c=.70	c=0.82

---

Model 1 includes sociodemographic factors only; Model 2 adds health and internet access factors; AOR= adjusted odds ratio; CI= 95% confidence interval around AOR; ref = reference group for comparison of variable categories.

<sup>a</sup> Younger age: 45-55 yr, 66-70 yr, 76-80 yr; Older age: 56-65 yr, 71-75 yr, 81-85 yr

<sup>b</sup> Significantly differs from reference group at  $p < .01$

<sup>c</sup> Significantly differs from reference group at  $p < .001$

<sup>d</sup> Significantly differs from reference group at  $p < .05$

<sup>e</sup> The model c-statistic assesses how well the full logistic regression model predicts who reported using the patient portal during the prior year.
