

**Supplemental Table 2: Multivariate Meta-Regression of Effect Size (Difference in HPV Vaccine Initiation between Minority and White)**

<b>Correlate</b>		<b>Initiation (k=94)</b>	<b>Follow-through (k=42)</b>
		RD [95% CI]	RD [95% CI]
Year of Data Collection		0.3% [-0.4%,1.1%]	<b>1.2% [-0.2%,2.5%]</b>
Sex			
(ref: Female only)	Includes Males	<b>5.1% [1.4%,8.9%]</b>	2.1% [-5.2%,9.3%]
Age			
(ref: Includes 18+)	Under 17 Only	<b>4.4% [1.6%,7.2%]</b>	0.5% [-4.0%,5.1%]
Data Source			
(ref: Self-Report)	Provider Verified	<b>7.5% [4.7%,10.3%]</b>	4.4% [1.6%, 10.4%]

*Note.* Effect size is the difference in HPV vaccine initiation between minority and white. Negative numbers indicate a disparity, minorities had lower HPV vaccination coverage than whites; positive numbers indicate a reverse disparity.
