

## Electronic supplementary material

Cayuela et al. Slow life-history strategies are associated with negligible actuarial senescence in Western Palearctic salamanders.

**Table S1.** Information about age-dependent capture-recapture data in four populations of *Lyciasalamandra fazilae*, *Salamandrina perspicillata*, and *Salamandra salamandra* (two populations). The mean adult lifespan was calculated using the following formulae:  $a + (s/(1+s))$  where  $s$  is the survival at adult stage and  $a$  is the age at sexual maturity. Age at sexual maturity were obtained from the following references: *L. fazilae*, Olgun et al. 2001; *S. perspicillata*, Angelini et al. 2010; and *S. Salamandra*, Reinhard et al. 2015 (in *Salamandra algira*).

Parameter	<i>L. fazilae</i>	<i>S. perspicillata</i>	<i>S. salamandra</i> 1	<i>S. salamandra</i> 2
Number of individuals	133	911	304	376
Number with known birth year	67	55	0	0
Number with known death year	5	0	0	0
Total number of captures	179	1629	609	1474
Earliest detection time	1999	1998	2008	1965
Latest detection time	2009	2006	2015	1985
Earliest recorded birth year	1990	1994	0	0
Latest recorded birth year	1997	2002	0	0
Earliest recorded death year	2000	0	0	0
Latest recorded death year	2003	0	0	0
Total survey length (years)	11	9	8	21
Mean adult lifespan	6	9.5	8.5	8.5

**Table S3.** Deviance information criterion (DIC) for each of the mortality function in three salamanders of western Palearctic. We considered the four mortality functions implemented in BaSTA program: exponential (EXP), Gompertz (GOM), Weibull (WEI) and logistic (LOG). For the three last functions, we considered three potential shapes: simple that only uses the basic functions described above (“Simple”); Makeham (“Makeham”); and bathtub (“Bath”).

	<i>Simple</i>	<i>Bath</i>	<i>Makeham</i>
<i>Lyciasalamandra fazilae</i>			
Logistic	Not converged	Not converged	1909.03
Exponential	<b>1593.92</b>	-	-
Gompertz	1626.67	Not converged	1946.88
Weibull	1709.25	Not converged	1701.72
<i>Salamandrina perspicillata</i>			
Logistic	15394.47	14928.48	15382.08
Exponential	Not converged	-	-
Gompertz	Not converged	<b>14881.98</b>	Not converged
Weibull	15530.53	14898.80	15238.54
<i>Salamandra Salamandra (pop1)</i>			
Logistic	6704.18	Not converged	6723.45
Exponential	Not converged	-	-
Gompertz	6479.37	Not converged	Not converged
Weibull	<b>6319.93</b>	Not converged	6711.14
<i>Salamandra Salamandra (pop2)</i>			
Logistic	6099.82	6108.51	6101.58
