28 **Figure S1. Locations of residues L93, F96, L97 and S92 at dimer and/or trimer interface.** (A)  
29 A top view and enlargement of apo dimer structure of MCP2201 LBD show that residue L93,  
30 F96 and L97 do not pack against any hydrophobic residue of the other protomer. The locations of  
31 these residues in trimeric interface are shown in Figure 3D. (B) Residue S92 locates at the apo  
32 dimer interface, yet is solvent accessible. (C) S92 occupies in the trimer interface the full space  
33 where cannot tolerate amino acid residues with large side chain. Different chains are shown in  
34 different colors.

39 **Figure S2. Steric hindrance observed in the modelled ligand-free trimer and citrate-bound**  
 40 **dimer.** (A) Three ligand-free (cyan) LBD protomers are superposed into citrate-bound (green)  
 41 TOM, displaying significant steric hindrance (ringed by red circles) in the trimer interface. Three  
 42 protomers of ligand-free LBD are distinguished by colors in the enlarged views. (B) Two citrate-  
 43 bound (green) LBD protomers are superposed into ligand-free (yellow) LBD dimer, displaying  
 44 significant steric hindrance (ringed by red circles) in the dimeric interface.
