

**Suppl. Fig 4. Purification of exosomes from melanoma cells.** Human melanoma cells (MEL526) were cultured for 72 h. The conditioned medium was recovered and used for exosome isolation using the total exosome isolation reagent from cell culture media. Exosome analysis was performed using NanoSight LM14C. Figures are presenting data from 5 videos of 60 seconds. (A) Particles size distribution. (B) Size/intensity analyses.
