

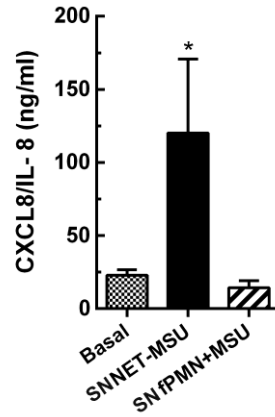

Figure S10. Residual MSU does not stimulate CXCL8 /IL-8 cytokine secretion by human macrophages

Secretion of CXCL8/IL-8 by human macrophages cultured in the absence (basal) or presence of supernatants of either MSU-stimulated neutrophils (SN NET-MSU) or SN PFA-fixed (fPMN) neutrophils incubated with MSU. Data are depicted as the mean \pm SEM of 4 independent experiments performed in triplicate. * $p < 0.05$ (two-way ANOVA with repeated measures followed by Bonferroni's multiple comparisons test).
