

**Table S1: Subject Characteristics**

|   |                      |
|---|----------------------|
| Age, median (range)   | 39.5 (25-52) years   |
| Sex, n male (%)   | 10 (63%)             |
| Post-mortem interval, median (range)  | 5.2 (2.2-28.3) hours |
| Post-mortem serum creatinine, median (range)  | 2.3 (0.7-7.3) mg/dL  |
| Antiretroviral regimen (n on each regimen)*   |                      |
| tenofovir disoproxil fumarate/lamivudine/efavirenz  | 11                   |
| abacavir/lamivudine/atazanavir/ritonavir  | 2                    |
| zidovudine/lamivudine/atazanavir/ritonavir  | 1                    |
| *2 individuals were not on antiretrovirals at time of death but their data were used to assess for post-mortem effects on other laboratory values (i.e. serum creatinine and albumin ratio) |                      |
