

Fig. S2. Quantification of ILC2 in different tissues, related to Fig. 1 A-C. Il13-eGFP mice treated with 3 doses of rIL-33 (1 μ g per dose) or PBS (25 μ l) over 1 week and culled 24h after the final dose. ILC2 number in lungs, blood, bone marrow (BM), Spleen, Inguinal lymph node (LN), lung draining LN and mesenteric LN. $n \geq 6$ mice per group. Data representative of 2 experiments.
