

Fig. S1. Structure, antimycobacterial activity and cytotoxicity of SAR1 and 4HQ 2150.

(A) SAR1 and (B) 2150 were tested against Mtb under replicating (R) or non-replicating (NR) conditions in the 4-stress model and against human HepG2 cells. The activity of SAR1 against replicating *M. bovis* BCG was determined by IC₈₀. Data are means from one of two similar experiments, each in triplicate.
