Supplemental Figure 1. Principal coordinates analysis of nose/throat samples assigned to community types.....	2
Supplemental Figure 2. Model fit of negative log models by number of Dirichlet components using the first and last samples of all study participants (n=1,405 samples).....	3
Supplemental Figure 3. Chao1 by community type types based on first and last nose/throat samples of 717 study participants from 144 households, Managua, Nicaragua, 2012-2014.....	4
Supplemental Figure 4. Relative abundance of oligotypes by community type.	13
Supplemental Figure 5. Accelerated failure time models assessing impact of community types on outcomes of interest among 124 secondary cases from 70 households, Managua, Nicaragua, 2012-2014.	14
Supplementary Table 1. Summary of accelerated failure time models used to investigate the relationship between the nose/throat microbiota and various symptom and viral shedding outcomes.	15
Supplemental Table 2. Accelerated failure time models estimating association between alpha diversity and symptom duration.....	16
Supplemental Table 3. Accelerated failure time models estimating association between alpha diversity and shedding and time to infection.	17
Supplemental Table 4. Single oligotypes models using log ₁₀ -transformed relative abundance of 15 oligotypes that contributed 50% of difference between community types.....	18
Supplemental Table 5. Sensitivity analysis using alternative definitions of illness period.....	20

Supplemental Figure 1. Principal coordinates analysis of nose/throat samples assigned to community types. 1,405 nose/throat samples from 717 study participants residing in 144 households in Managua, Nicaragua, 2012-2014. Based on Bray-Curtis dissimilarity.

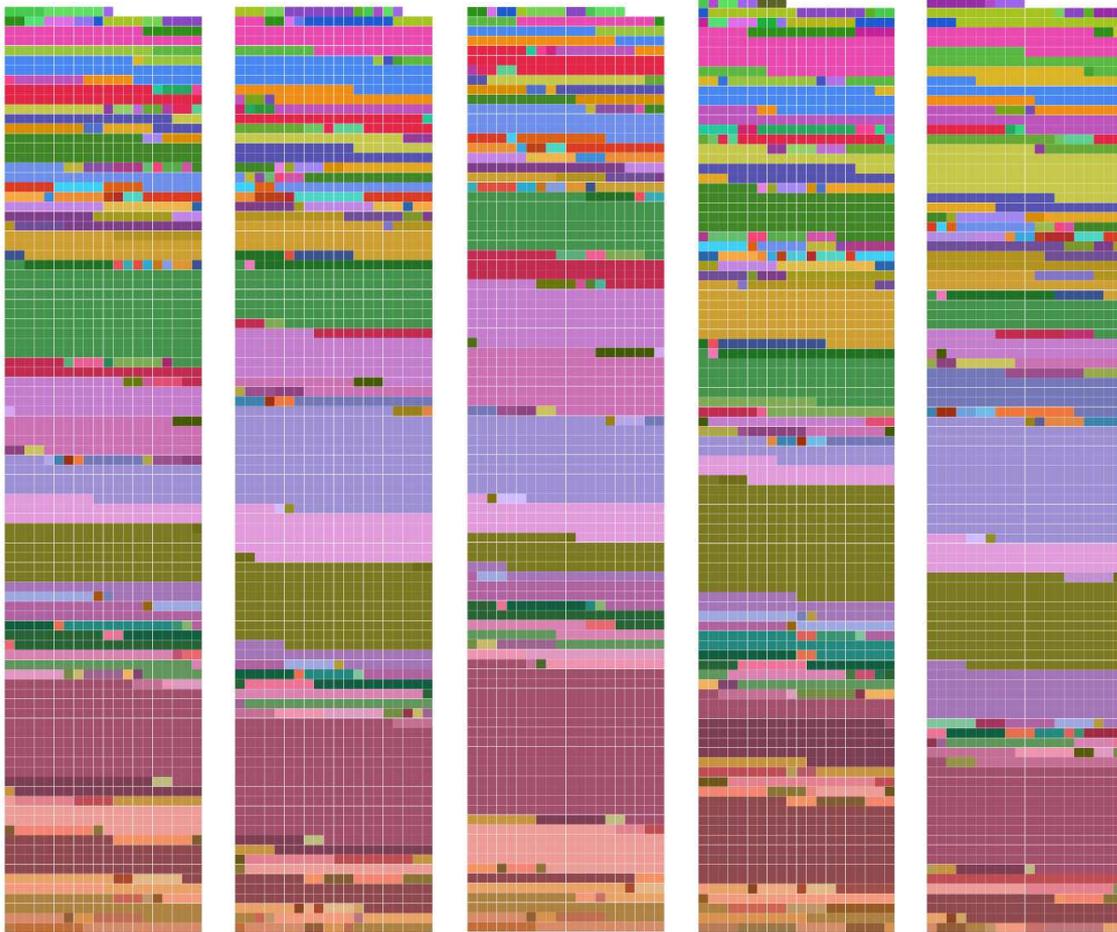

Supplemental Figure 2. Model fit of negative log models by number of Dirichlet components using the first and last samples of all study participants (n=1,405 samples). We determined the number of community types by estimating the Laplace approximation of the negative log models and identifying the point at which an increase in Dirichlet components resulted in minor reductions in model fit. Considerations were placed on statistical power in downstream analyses.

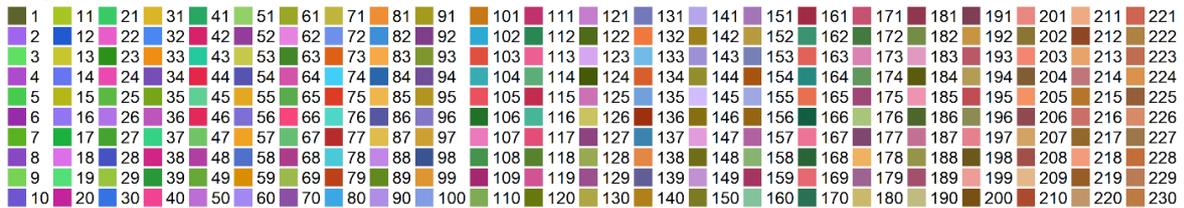

Supplemental Figure 3. Chao1 by community type types based on first and last nose/throat samples of 717 study participants from 144 households, Managua, Nicaragua, 2012-2014. Each violin plot contains a box plot with a kernel density estimation on each side depicting the distribution of data.

Community Type 1 n=343 Community Type 2 n=336 Community Type 3 n=282 Community Type 4 n=218 Community Type 5 n=181

1 square = 0.05% abundance

Supplemental Figure 4. Relative abundance of oligotypes by community type. Based on first and last nose/throat samples of 717 study participants from 144 households, Managua, Nicaragua, 2012-2014. Each square represents 0.05% relative abundance.

Supplemental Figure 5. Accelerated failure time models assessing impact of community types on outcomes of interest among 124 secondary cases from 70 households, Managua, Nicaragua, 2012-2014. Models are not specific to influenza type/subtype. Children 0 to 5 years of age were removed from the sore throat model as young children are not able to reliably report sore throat.

Supplementary Table 1. Summary of accelerated failure time models used to investigate the relationship between the nose/throat microbiota and various symptom and viral shedding outcomes. Models additionally controlled for clustering by household and were not specific to influenza type/subtype. Columns to the right of the bold vertical line indicate independent variables included in the model. Models were rerun using community types and \log_{10} -transformed relative abundance of 15 oligotypes that contributed to 50% of difference between community types.

Model	Community diversity	Age	Sex	Smoker in household	Crowding
Symptom duration	Yes	Yes	Yes	No	No
Shedding duration	Yes	Yes	Yes	No	No
Serial interval	Yes	Yes	Yes	Yes	Yes
Time to shedding onset	Yes	Yes	Yes	Yes	Yes

Supplemental Table 2. Accelerated failure time models estimating association between alpha diversity and symptom duration. Among 124 secondary cases from 70 households, Managua, Nicaragua, 2012-2014.

Outcome	Shannon Diversity	Chao1 Index
	Acceleration Factor (95% Confidence Interval)	
Duration of fever	0.80 (0.31, 2.07)	1.00 (0.99, 1.01)
Duration of runny nose	1.87 (0.67, 5.24)	1.01 (0.996, 1.03)
Duration of sore throat	1.01 (0.55, 1.85)	1.00 (0.99, 1.01)
Duration of cough	1.39 (0.56, 3.49)	1.00 (0.99, 1.02)

Supplemental Table 3. Accelerated failure time models estimating the association between alpha diversity and shedding and time to infection. Among 124 secondary cases from 70 households, Managua, Nicaragua, 2012-2014.

Model	Shedding duration	Serial Interval	Time to shedding onset
	Acceleration Factor (95% CI)		
Shannon diversity	1.61 (1.24, 2.10)	0.72 (0.53, 0.97)	0.85 (0.68, 1.07)
<5 yrs	1.04 (0.64, 1.69)	0.72 (0.49, 1.05)	0.87 (0.62, 1.21)
6-17 yrs	0.95 (0.66, 1.37)	1.09 (0.76, 1.56)	0.98 (0.72, 1.31)
Female	1.06 (0.77, 1.47)	1.02 (0.73, 1.42)	0.92 (0.73, 1.15)
Smoker in household	-	0.95 (0.65, 1.47)	0.86 (0.62, 1.19)
Household crowding	-	0.93 (0.63, 1.38)	1.04 (0.77, 1.40)
Chao1 index	1.01 (0.999, 1.01)	0.99 (0.99, 0.998)	0.99 (0.99, 0.999)
<5 yrs	1.08 (0.60, 1.96)	0.66 (0.45, 0.95)	0.75 (0.51, 1.11)
6-17 yrs	0.98 (0.67, 1.43)	1.05 (0.74, 1.48)	0.91 (0.68, 1.21)
Female	1.09 (0.78, 1.52)	1.02 (0.73, 1.43)	0.89 (0.71, 1.12)
Smoker in household	-	0.95 (0.65, 1.47)	0.86 (0.64, 1.17)
Household crowding	-	0.93 (0.63, 1.38)	1.10 (0.80, 1.50)

Supplemental Table 4. Single oligotypes models using log₁₀-transformed relative abundance of 15 oligotypes that contributed 50% of difference between community types. Benjamin-Hochberg method to correct for multiple testing. Among 124 secondary cases from 70 households, Managua, Nicaragua, 2012-2014.

<i>Megasphaera</i>	<i>Megasphaera micronuciformis</i>
<i>Prevotella 5</i>	<i>Prevotella salivae</i>
<i>Veillonella 2</i>	<i>Veillonella parvula / rogosae / atypica / denticariosi / dispar</i>

^aCorrected for multiple testing using the Benjamin-Hochberg method.

^bChildren 0-5 years of age were removed from the sore throat model as they cannot reliably report the symptom.

Supplemental Table 5. Sensitivity analysis using alternative definitions of illness period. Alternative 1: influenza-associated illness period does not exclude symptoms if fever recurs ≥ 3 days after fever alleviation. Alternative 2: influenza-associated illness period only considers symptoms of influenza-like illness. Alternative 3: all symptoms of acute respiratory illness during follow-up contribute to influenza-associated illness period. Displaying acceleration factor for diversity measure.

Shannon Diversity

Model	Original definition	Alternative 1 Shannon	Alternative 2 Shannon	Alternative 3 Shannon
Fever	0.80 (0.31, 2.07)	0.59 (0.20, 1.76)	0.82 (0.32, 2.12)	0.52 (0.18, 1.52)
