What Do Workplace Wellness Programs Do? Evidence from the Illinois Workplace Wellness Study

Damon Jones, University of Chicago and NBER

David Molitor, University of Illinois and NBER

Julian Reif, University of Illinois and NBER

July 2019

Appendix **A**: Additional Figures and Tables

Appendix **B**: Comparison with Prior Literature

Appendix **C**: Multiple Hypothesis Testing Methodology

Appendix **D**: Details of the Illinois Workplace Wellness Study

The most recent version of Appendix C is available on the study website:

www.nber.org/workplacewellness/s/wyoung.pdf

APPENDIX A: ADDITIONAL FIGURES AND TABLES

Appendix Figure [A.1](#) plots our intent-to-treat (ITT) estimate for medical spending as a function of the degree of winsorization (top-coding). (Winsorization is employed only in Section [2](#), where we compare our estimates with the prior literature.) The point estimate is stable across a wide range of winsorization levels, suggesting winsorization does not introduce bias.

Appendix Tables [A.1a](#) and [A.1b](#) provide summary statistics at baseline for the employees in our sample. Columns (2)–(8) report means for those who were assigned to our control and treatment groups. Column (1) reports means for employees not enrolled in our study. To evaluate balance, we regress the study variable reported in each row on seven indicators, one for the control and each of six treatment groups, and test for the joint equality of the seven coefficients. Column (9) reports the p -value from that test. We also estimate a seemingly unrelated regression model to test whether the variables listed within each panel predict enrollment into either the control or any of the six treatment groups. The bottom of Tables [Ia](#) and [Ib](#) reports the p -value from jointly testing whether all regression coefficients across all seven groups are equal to zero, within each panel.

Appendix Tables [A.3a–A.3d](#) provide selection results for the full set of prespecified variables shown in Tables [Ia](#) and [Ib](#) using Equation (1). Appendix Tables [A.4a–A.4g](#) report the causal, ITT effect of our intervention on all prespecified variables. Appendix Tables [A.5a–A.5h](#) provide the corresponding IV and OLS estimates of Equation (3) for all prespecified variables.

Appendix Tables [A.6a](#) and [A.6b](#) report ITT estimates for medical spending from a model that allows the treatment effect to vary by treatment group. We do not find statistically significant treatment effects for any treatment group in any of these specifications.

Appendix Tables [A.7a–A.7g](#) report the causal, ITT effect of our intervention on longer-run versions of all prespecified variables. The time horizon of each longer-run outcome ranges from 24–30 months, as reported in column (1) of the table.

Appendix Table [A.8](#) reports the loadings of the first principal component of productivity.

Appendix Table [A.9](#) presents the results of a cross-validation exercise that compares each of our administrative measures of employment and productivity to each of our survey measures of work and productivity. We find a strong degree of concordance between the independently measured administrative and survey variables. The eighth row of column (3) reports that individuals who self-report receiving “a promotion or more responsibility at work” are 22.5 percent more likely to have an official title change in our administrative data, and column (2) reports that they are 22.9 percent more likely to have received a promotion, which we define as having both a job title change and a nonzero salary raise.

Appendix Table [A.10](#) reports results of tests for differential attrition between the control and treatment groups. We perform these tests separately for our three main sources of data: health insurance claims, university administrative data, and online surveys. The fractions of control and treatment subjects included in the health insurance and university administrative datasets are very similar. The control group’s survey completion rate is slightly higher than the treatment group’s completion rate in both 2017 and 2018.

In Appendix Figure [A.2](#) and Appendix Table [A.13](#) we apply the method of [Andrews and Kasy \(forthcoming, 2019\)](#) to explore the possibility of publication bias among prior wellness studies. We draw on the 40 studies for which we could identify an effect and standard error. Appendix Figure [A.2a](#) plots the distribution of z -statistics among these studies, with a red vertical line indicating a z -statistic of -1.96 . Appendix Figure [A.2b](#) plots the effect estimates from these studies against their standard errors, with a diagonal line separating studies by significance at the 5 percent level. Visually, there appears to be a higher frequency of studies with z -statistics near -1.96 .

Using an online app published by one of the authors, Maximilian Kasy (<https://maxkasy.github.io/home/metastudy/>), we estimate the following model of the true distri-

bution of estimates and publication probability conditional on z -score:

$$(A.1) \quad \mu \sim \bar{\theta} + t(\nu) \cdot \tilde{\tau}, \quad p(Z) \propto \begin{cases} \beta_{1,p} & |Z| < 1.96 \\ 1 & |Z| \geq 1.96. \end{cases}$$

The key parameter, $\beta_{1,p}$, represents the probability of publication for studies that have a z -statistic with absolute value less than 1.96, relative to those studies that have a z -statistic with absolute value greater than 1.96. A value of $\beta_{1,p} = 1$ would indicate that effects have an equal likelihood of being published, whether they are statistically significant or not. The estimate we find of 0.37 suggests that effects that are insignificant are published a little more than one-third the rate of significant ones.

Our estimates for position ($\bar{\theta}$), scale ($\tilde{\tau}$), and degrees of freedom (ν) parameters for this distribution, along with the relative publication probability, are reported in Appendix Table [A.13](#). The bias-corrected mean estimate is not significantly different from zero ($p = 0.14$), and the relative publication probability of insignificant studies is 0.37. See [Andrews and Kasy \(forthcoming, 2019\)](#) for more details on the method.

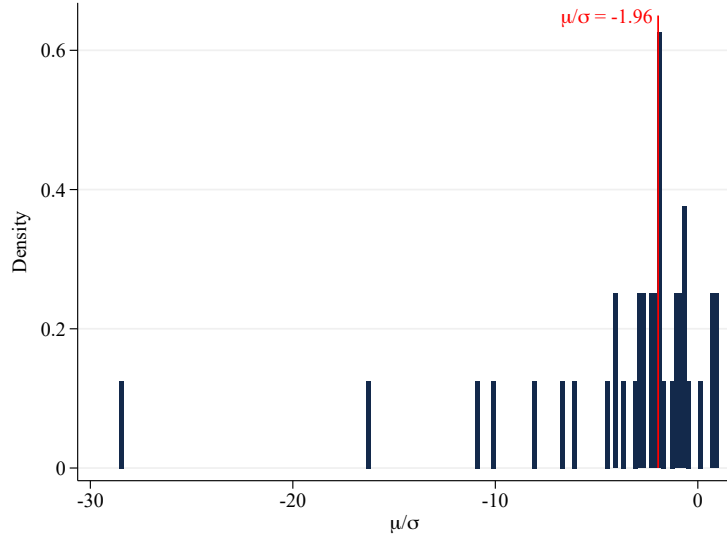

Finally, Appendix Table [A.14](#) provides the definition, data source, and time period for every variable presented in the paper.

FIGURE A.1: First-Year Winsorized Medical Spending estimates

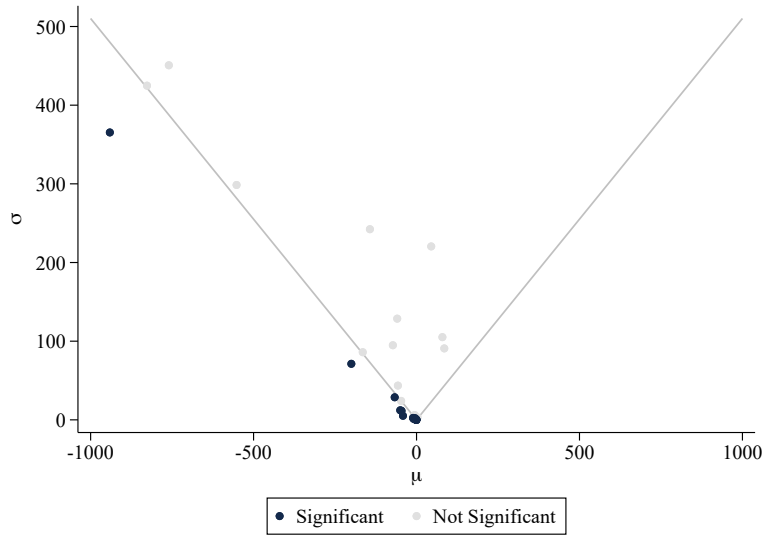

Notes: The figure reports how intent-to-treat (ITT) medical spending effect estimates vary by the degree of winsorization (top-coding) of medical spending, calculated as the average monthly health care spending over the first 12 months of the wellness program (August 2016–July 2017). Each ITT estimate is estimated from a separate regression of medical spending (winsorized at the level indicated by the horizontal axis) on an indicator for inclusion in the treatment group. Observations include individuals in the control or treatment groups, and regressions are weighted by the number of months of medical coverage. The solid orange line reports estimates from a specification that includes no controls. The dashed black line reports estimates from a specification that includes the same controls as the ITT post-Lasso specification reported in row 1 and column (3) of Table III. Shaded regions indicate 95% confidence intervals based on robust standard errors. The values of the Lasso-controlled ITT point estimates and confidence intervals for selected levels of winsorization are reported in Panel A of Table A.11.

FIGURE A.2: Meta-Analysis of Publication Bias

(a) Density of z -statistics: μ/σ

(b) Estimates versus standard error

Notes: Following [Andrews and Kasy \(forthcoming, 2019\)](#), we plot in Panel (a) a binned density plot of z -statistics from 40 studies in the prior literature. The vertical red line represents a z -statistic of -1.96. Panel (b) plots each point estimate, μ , against its standard error, σ . The grey lines mark $|\mu|/\sigma = 1.96$.

Notes: This table reports treatment effects on completing components of the iThrive workplace wellness program tied to completion incentives. Only members of the treatment group were eligible to complete each component (i.e. control group participation is zero), except both groups were eligible for a follow-up screening in year 2. Each column in each panel reports estimates from a separate regression estimated over individuals in the treatment and control groups. The outcome in each regression is an indicator for completing the program component indicated by the column, and the primary independent variable is an indicator for inclusion in the treatment group. Participation effects for each outcome are estimated with and without baseline strata fixed effects. Robust standard errors are reported in parentheses. Missing standard errors are reported when the estimated variance is negative. A */**/** indicates significance at the 10/5/1% level using conventional inference.

	<i>N</i> =3,239	<i>N</i> =3,239	<i>N</i> =3,239	<i>N</i> =3,152

Notes: The outcomes in this table constitute a single family of outcomes for calculating family-wise p -values. Each row and column reports estimates from a separate regression, where observations include individuals in the control or treatment groups. The outcome in each regression is specified by the table row. The focal independent variable is an indicator for inclusion in the treatment group, and the control strategy is specified by the column. Post-Lasso controls include covariates selected by Lasso to predict the dependent variable. The set of potential predictors include baseline values of all available variables in the same family of outcomes, strata variables, and the baseline (2016) survey variables reported in Table Ia, as well as all two-way interactions between these predictors. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference, i.e., not adjusting for multiple outcomes. Family-wise p -values, reported in brackets, adjust for the number of outcome variables in the table.

Notes: Each row and column reports estimates from a separate regression. The outcome in each regression is specified by the table row, and the (endogenous) focal independent variable is an indicator for completing the screening and HRA. For the IV specifications (columns (1)-(3)), the instrument is an indicator for inclusion in the treatment group, and observations include individuals in the control or treatment groups. For the OLS specifications (columns (4)-(6)), there is no instrument and observations are restricted to individuals in the treatment group. The control strategy is specified by the column. Post-Lasso controls include covariates selected by Lasso to predict either the dependent variable or the focal independent variable. The set of potential predictors include baseline values of all available variables in the same family of outcomes, strata variables, and the baseline (2016) survey variables reported in Table Ia, as well as all two-way interactions between these predictors. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference.

Group A75					-39.18 (69.71)	-14.83 (69.46)
Group B75					-50.99 (70.29)	-49.65 (70.57)
Group C75					42.45 (81.02)	45.81 (80.89)
Constant	568.83*** (38.00)	561.91*** (37.53)	568.83*** (38.02)	562.02*** (37.55)	568.83*** (38.03)	562.01*** (37.56)
<i>N</i>	3,239	3,239	3,239	3,239	3,239	3,239
Strata FE	No	Yes	No	Yes	No	Yes
F Test	0.82	0.67	0.90	0.90	0.52	0.54

Notes: Each column reports estimates from a separate regression estimated over individuals in the treatment and control groups in the claims sample. The outcome in each regression is average monthly health care spending over the first 12 months of the wellness program (August 2016–July 2017), and regressions are weighted by the number of months of coverage. The independent variables are indicators for inclusion in the specified treatment groups. Regressions reported in columns (2), (4), and (6) are the same as those reported in columns (1), (3), and (5) respectively, but with the addition of strata fixed effects. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference.

TABLE A.6b: First-Year Treatment Effects (ITT) by Treatment Group: Any Health Care Spending

F Test	0.477	0.495	0.699	0.745	0.566	0.778

Notes: Each column reports estimates from a separate regression estimated over individuals in the treatment and control groups in the claims sample. The outcome in each regression is an indicator for positive health care spending over the first 12 months of the wellness program (August 2016–July 2017). The independent variables are indicators for inclusion in the specified treatment groups. Regressions reported in columns (2), (4), and (6) are the same as those reported in columns (1), (3), and (5) respectively, but with the addition of strata fixed effects. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference.

TABLE A.7a: Longer-Run Treatment Effects (ITT)

Outcome Variable	(1) Horizon (months)	(2) Mean	(3) No Controls	(4) Strata FEs	(5) Post-Lasso
A. Medical Spending [admin]					
Total spending (dollars/month) [admin]	30	650.5	-74.7 (58.5) [0.618] <i>N</i> =3,307	-65.0 (58.0) [0.720] <i>N</i> =3,307	-39.7 (47.9) [0.754] <i>N</i> =3,155
Drug spending [admin]	30	148.8	-25.2 (27.7) [0.836] <i>N</i> =3,307	-23.5 (27.6) [0.864] <i>N</i> =3,307	-22.2 (16.4) [0.589] <i>N</i> =3,155
Office spending [admin]	30	74.2	-6.6 (8.6) [0.836] <i>N</i> =3,307	-6.0 (8.5) [0.864] <i>N</i> =3,307	-4.8 (5.4) [0.754] <i>N</i> =3,155

Nonzero medical spending [admin]	30	0.950	0.005 (0.008) [0.836] <i>N</i> =3,307	0.006 (0.008) [0.864] <i>N</i> =3,307	0.007 (0.007) [0.754] <i>N</i> =3,155

Notes: The outcomes in this table constitute a single family of outcomes for calculating family-wise p -values. Each row and column reports estimates from a separate regression, where observations include individuals in the control or treatment groups. The outcome in each regression is specified by the table row. The focal independent variable is an indicator for inclusion in the treatment group, and the control strategy is specified by the column. Post-Lasso controls include covariates selected by Lasso to predict the dependent variable. The set of potential predictors include baseline values of all available variables in the same family of outcomes, strata variables, and the baseline (2016) survey variables reported in Table Ia, as well as all two-way interactions between these predictors. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference, i.e., not adjusting for multiple outcomes. Family-wise p -values, reported in brackets, adjust for the number of outcome variables in the table.

TABLE A.7b: Longer-Run Treatment Effects (ITT)

Sedentary [survey]	24	0.553	0.008 (0.019) [1.000] N=3,018	0.009 (0.019) [1.000] N=3,018	-0.007 (0.015) [0.999] N=3,008

Notes: The outcomes in this table constitute a single family of outcomes for calculating family-wise p -values. See notes to Appendix Table A.7a for additional details.

TABLE A.8: The Loadings of the First Principal Component of Productivity

Productivity Variables	(1) Baseline	(2) First-Year Follow-Up	(3) Longer-Run Follow-Up
Sick leave (days/year) [admin]	-0.429	-0.064	-0.053
Any sick days in past year [survey]	-0.402	-0.050	-0.042
Worked 50+ hours/week [survey]	0.293	-0.035	-0.024
Management priority on health/safety [survey]	0.299	0.229	0.235
Annual salary (dollars) [admin]	0.364	N/A	N/A
Very or somewhat satisfied with job [survey]	0.409	0.342	0.381
Very satisfied with job [survey]	0.424	0.320	0.363
Job search somewhat/very likely [survey]	N/A	-0.307	-0.335
Job search very likely [survey]	N/A	-0.283	-0.303
Feel very productive at work [survey]	N/A	0.209	0.257
Annual salary (share of baseline salary) [admin]	N/A	0.232	0.208
Received promotion [survey]	N/A	0.250	0.233
Happier at work than last year [survey]	N/A	0.306	0.337
Job title change [admin]	N/A	0.379	0.292
Job promotion [admin]	N/A	0.386	0.309

Notes: The first principal component of productivity corresponds to the “productivity index” outcome reported in other tables. This component is calculated as a linear combination of productivity variables, where the weights in that linear combination are equal to the loadings reported in this table and the variables in that linear combination are normalized to have a mean of zero and variance of one. The sum of the squared loadings is equal to one for each column.

TABLE A.9: Associations Between Administrative and Survey Measures of Productivity

	(1) Annual salary (share of baseline salary)	(2) Job promotion	(3) Job title change	(4) Job terminated	(5) Sick leave (days/year)
Any sick days in past year [survey]	-0.009* (0.005) N=3,322	0.005 (0.014) N=3,322	0.009 (0.014) N=3,322	-0.026*** (0.007) N=3,565	3.242*** (0.240) N=3,565

Sample size (outcome mean)	3,309	3,309	3,309	3,550	3,550
Outcome mean	0.061	0.184	0.192	0.045	6.473

Notes: Each row and column reports estimates from a separate regression, where observations include all individuals who completed the one-year follow-up survey. The outcome in each regression is specified by the table column. The independent variable is the survey response, which is always an indicator variable. (The Presenteeism survey variable is omitted from this table.) The outcome mean is calculated for the sample of observations that have non-missing values for all survey variables listed in this table. Regressions are unweighted. Robust standard errors are reported in parentheses. A */**/** indicates significance at the 10/5/1% level using conventional inference, i.e., not adjusting for multiple outcomes.

TABLE A.10: Tests of Differential Attrition Between Control and Treatment Groups

	(1) Control	(2) Treatment	(3) Difference	(4) <i>p</i> -value
Health insurance enrollment (first 12 months)	0.634	0.638	0.004	0.768
Health insurance enrollment (first 30 months)	0.613	0.615	0.002	0.887
Job terminated (first 12 months)	0.122	0.109	-0.013	0.210
Job terminated (first 30 months)	0.202	0.204	0.002	0.862
2017 survey	0.754	0.730	-0.024	0.075
2018 survey	0.646	0.615	-0.031	0.036
Sample size	1,534	3,300		

Notes: This table reports health insurance enrollment rates and job termination rates for the first 12 and the first 30 months following randomization, and completion rates for the 2017 and 2018 online surveys. An individual's insurance enrollment is defined as the number of covered months divided by the length of the sample period (either 12 or 30 months). Columns (1)-(2) report unweighted means for the control and treatment groups. Column (3) reports the difference between the two means and column (4) reports the *p*-value from a joint test of equality of the two means.

TABLE A.11: First-Year Winsorized Medical Spending Treatment Effects

	(1)	(2)	(3)	(4)	(5)
A. ITT Estimates (Post-Lasso)					
Total spending (dollars/month) [admin]	34.9 (36.9) [-37.5, 107.2]	16.0 (23.2) [-29.5, 61.5]	17.2 (19.5) [-21.0, 55.3]	15.4 (13.5) [-11.0, 41.9]	10.9 (9.7) [-8.2, 30.0]
<i>N</i>	3,152	3,152	3,152	3,152	3,152
Winsorization (percent)	0	0.5	1	2.5	5
B. IV Estimates (Post-Lasso)					
Total spending (dollars/month) [admin]	52.3 (59.4) [-64.2, 168.7]	20.4 (38.0) [-54.1, 94.9]	22.0 (31.7) [-40.2, 84.2]	21.9 (21.9) [-20.9, 64.8]	16.6 (15.7) [-14.2, 47.5]
<i>N</i>	3,152	3,152	3,152	3,152	3,152
Winsorization (percent)	0	0.5	1	2.5	5

Notes: Each row and column reports estimates from a separate regression, where observations include individuals in the control or treatment groups. The outcome in each regression is winsorized (top-coded) average monthly medical spending over the first 12 months of the intervention, winsorized at the level indicated in each column. Regressions are weighted by the number of months of coverage. In Panel A (ITT), the focal independent variable is an indicator for inclusion in the treatment group, and all regressions include the same controls as the ITT post-Lasso specification reported in row 1 and column (3) of Table III. In Panel B (IV), the (endogenous) focal independent variable is an indicator for completing the screening and HRA, the instrument is an indicator for inclusion in the treatment group, and all regressions include the same controls as the IV post-Lasso specification reported in row 1 and column (2) of Table IV. Column (1) replicates the (non-winsorized) ITT and IV post-Lasso results reported in Table III and Table IV. Robust standard errors are reported in parentheses, and 95% confidence intervals are reported in brackets. A */**/** indicates significance at the 10/5/1% level using conventional inference.

TABLE A.12: Longer-Run Winsorized Medical Spending Treatment Effects

	(1)	(2)	(3)	(4)	(5)
A. ITT Estimates (Post-Lasso)					
Total spending (dollars/month) [admin]	-39.7 (47.9) [-133.7, 54.3]	-1.4 (24.7) [-49.8, 47.0]	5.7 (20.1) [-33.8, 45.1]	12.2 (13.9) [-15.0, 39.4]	10.2 (9.8) [-9.1, 29.5]
<i>N</i>	3,155	3,155	3,155	3,155	3,155
Winsorization (percent)	0	0.5	1	2.5	5

Notes: Each row and column reports estimates from a separate regression, where observations include individuals in the control or treatment groups. The outcome in each regression is winsorized (top-coded) average monthly medical spending over the first 30 months of the intervention, winsorized at the level indicated in each column. Regressions are weighted by the number of months of coverage. In Panel A (ITT), the focal independent variable is an indicator for inclusion in the treatment group, and all regressions include the same controls as the ITT post-Lasso specification reported in row 1 and column (6) of Table III. Column (1) replicates the (non-winsorized) ITT result reported in Table III. Robust standard errors are reported in parentheses, and 95% confidence intervals are reported in brackets. A */**/** indicates significance at the 10/5/1% level using conventional inference.

TABLE A.13: Meta-Analysis Estimates of Publication Bias

(1)	(2)	(3)	(4)
Student- <i>t</i> Distribution of Wellness Program Effects			Relative Publication Probability for $p > 0.05$
$\bar{\theta}$	$\tilde{\tau}$	ν	$\beta_{1,p}$
-0.583 (0.398)	0.385 (0.302)	1.990 (0.478)	0.369 (0.153)

Notes: Using the method of [Andrews and Kasy \(forthcoming, 2019\)](#), we estimate the model given by Equation [A.1](#). Table reports the meta-analysis estimates of the bias-corrected distribution of wellness program effects on medical spending and absenteeism, with location ($\bar{\theta}$), scale ($\tilde{\tau}$), and degrees of freedom ($\tilde{\nu}$) parameters for a Student-*t* distribution. Publication probability $\beta_{1,p}$ for studies not significant at the 5% level is normalized relative to studies significant at the 5% level.

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Male	Human resources data (C)	N/A	Sex = Male	May 30, 2016
Age 50+	Human resources data (C)	N/A	$50 \leq \text{Age}$	May 30, 2016
Age 37-49	Human resources data (C)	N/A	$37 \leq \text{Age} \leq 49$	May 30, 2016
White	Human resources data (C)	N/A	Race = White	May 30, 2016
Salary Q1 (bottom quartile)	Human resources data (C)	N/A	Salary \leq 25th percentile	Pre-period: May 30, 2016 Post-periods: August 15, 2017 January 31, 2019
Salary Q2	Human resources data (C)	N/A	25th pctile \leq Salary \leq 50th pctile	Pre-period: May 30, 2016 Post-periods: August 15, 2017 January 31, 2019
Salary Q3	Human resources data (C)	N/A	50th pctile \leq Salary \leq 75th pctile	Pre-period: May 30, 2016 Post-periods: August 15, 2017 January 31, 2019
Faculty	Human resources data (C)	N/A	Employment Class = Faculty	May 30, 2016
Academic Staff	Human resources data (C)	N/A	Employment Class = Academic Staff	May 30, 2016
Annual salary	Human resources data (C)	N/A	N/A	Pre-period: May 30, 2016 Post-periods: August 15, 2017 January 31, 2019
Annual salary (share of baseline salary)	Human resources data (C)	N/A	(Current salary / May 30, 2016 Salary) - 1	Pre-period: N/A Post-periods: August 15, 2017 January 31, 2019
Job title change	Human resources data (C)	N/A	In case of multiple titles, only measures title changes associated with primary job.	Pre-period: N/A Post-periods: August 15, 2017 January 31, 2019

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Job promotion	Human resources data (C)	N/A	Job title change = 1 & Salary raise > 0	Pre-period: N/A Post-periods: August 15, 2017 January 31, 2019
Job terminated	Human resources data (C)	N/A	TerminationDate<= Current date	Pre-period: N/A Post-periods: August 15, 2017 January 31, 2019
Sick leave (days/year)	Human resources data (C)	N/A	Sick days are measured monthly for CS employees, and biannually (August 15th and May 15th) for AP and Faculty employees. Number of sick days is normalized by fraction of year employed.	Pre-period: ³⁰ 8/1/15 - 7/31/16 Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19
Ever screened	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A1 (G1) Have you ever had your cholesterol checked? A2 (G2) Have you ever had a blood test for high blood sugar or diabetes, other than during pregnancy? A3 (G3) Have you ever had a blood test for high blood sugar or diabetes? A4 (G4) In the last 12 months, have you had a Pap test or Pap smear? A5 (G5) In the last 12 months, have you had a mammogram? A8 (G8) In the last 12 months, have you had a sigmoidoscopy or a colonoscopy? A9 (G9) In the last 12 months, have you had a blood test to check for prostate cancer?	Any of A1-A5, A8-A9 (G1-G5, G8-G9) = "Yes"	(A) July 2016 (G) July 2017 (G) July 2018
Physically active	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A11 (G11) Compared with most people your age, would you say you are more physically active, less physically active, or about the same?	A11 (G11) = "More active"	(A) July 2016 (G) July 2017 (G) July 2018

30. Pre- and post-period end dates are extended by 15 days for AP and Faculty employees (see description in Formula).

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Trying to be active	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A12 (G12) In the last 12 months, have you been told by a doctor or health professional to increase your physical activity or exercise? A13 (G13) Are you currently trying to increase your physical activity or exercise?	A12 (G12) = “Yes” or A13 (G13) = “Yes”	(A) July 2016 (G) July 2017 (G) July 2018
Current smoker (cigarettes)	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A16 (G16) Have you smoked at least 100 cigarettes in your entire life? A17 (G17) Do you now smoke cigarettes every day, some days, or not at all?	A16 (G16) = “Yes” and A17 (G17) = “Every day” or “Some days”	(A) July 2016 (G) July 2017 (G) July 2018
Current smoker (other)	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A22 (G22) Do you now smoke or use any other type of tobacco product, such as pipes, cigars, or chewing tobacco, every day, some days, or not at all? A23 (G23) Do you now use e-cigarettes (also known as vape-pens, hookah-pens, e-hookahs, or e-vaporizers) every day, some days, or not at all?	A22 (G22) & A23 (G23) != “Not at all”	(A) July 2016 (G) July 2017 (G) July 2018
Former smoker	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A16 (G16) Have you smoked at least 100 cigarettes in your entire life? A17 (G17) Do you now smoke cigarettes every day, some days, or not at all?	A16 (G16) = “Yes” and A17 (G17) = “Not at all”	(A) July 2016 (G) July 2017 (G) July 2018
Drinker	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A24 (G24) In the last 7 days, on how many days did you drink any type of alcoholic beverage?	A24 (G24) != 0	(A) July 2016 (G) July 2017 (G) July 2018
Heavy drinker	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A25 (G25) In the last 7 days, on the days when you did drink alcohol, how many drinks did you usually have per day? One “drink” is a 12 ounce can of beer, a 5 ounce glass of wine, or a 1.5 ounce shot of liquor.	A25 (G25) ≥ 4 if female A25 (G25) ≥ 5 if male	(A) July 2016 (G) July 2017 (G) July 2018
Chronic condition	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A27 (G27) Have you ever been told by a doctor or other health professional that you have any of the following? Mark all that apply.	At least one box is checked	(A) July 2016 (G) July 2017 (G) July 2018
Excellent or v. good health	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A28 (G28) Overall, how would you rate your health during the past 4 weeks?	A28 (G28) = “Excellent” or “Very good”	(A) July 2016 (G) July 2017 (G) July 2018
Not poor health	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A28 (G28) Overall, how would you rate your health during the past 4 weeks?	A28 (G28) != “Poor”	(A) July 2016 (G) July 2017 (G) July 2018

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Physical problems	2016 Online survey (A)	A29 (G29) During the past 4 weeks, how much	A29 (G29) = "Somewhat?,	(A) July 2016

		over-the-counter medications are you currently taking?		

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Physician/ER utilization	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A36 (G36) In the last 6 months, how many times did you go to a doctor's office, clinic, emergency room, or other healthcare provider to get care for yourself? Do not include dental visits. Your best estimate is fine.	A36 (G36) != "None"	(A) July 2016 (G) July 2017 (G) July 2018
Hospital utilization	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A37 (G37) = In the last 6 months, how many different times were you a patient in a hospital at least overnight? Do not include hospital stays to deliver a baby. Your best estimate is fine.	A37 (G37) != "None"	(A) July 2016 (G) July 2017 (G) July 2018
Any sick days in past year	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A45 (G46) In the last 12 months, about how many days of work have you missed because of disability or poor health? Your best estimate is fine.	A45 (G46) != 0	(A) July 2016 (G) July 2017 (G) July 2018
Worked 50+ hours/week	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A44 (G45) About how many hours a week do you usually work at your current job or jobs?	A44 (G45) = "50 or more"	(A) July 2016 (G) July 2017 (G) July 2018
Very satisfied with job	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A46 (G53) How satisfied are you with your current job?	A46 (G53) = "Very satisfied"	(A) July 2016 (G) July 2017 (G) July 2018
Very or somewhat satisfied with job	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A46 (G53) How satisfied are you with your current job?	A46 (G53) = "Very satisfied" or "Somewhat satisfied"	(A) July 2016 (G) July 2017 (G) July 2018
Management priority on health/safety	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G)	A52 (G62) How much of a priority do you think your unit's management places on the health and safety of workers?	A52 (G62) = "Very high priority" or "Some priority"	(A) July 2016 (G) July 2017 (G) July 2018
Happier at work than last year	2017 Online survey (G) 2018 Online survey (G)	G54 Do you feel happier at work this year than you did last year?	G54 = Yes	(G) July 2017 (G) July 2018
Presenteeism	2017 Online survey (G) 2018 Online survey (G)	G47 Despite having disability or poor health, I was able to finish hard tasks in my work. G48 At work, I was able to focus on achieving my goals despite disability or poor health. G49 Despite having disability or poor health, I felt energetic enough to complete all my work. G50 Because of disability or poor health, the stresses of my job were much harder to handle. G51 My disability or poor health distracted me from taking pleasure in my work. G52 I felt hopeless about finishing certain work tasks, due to my disability or poor health.	Stanford Presenteeism Scale (SPS-6), using G47-G52	(G) July 2017 (G) July 2018

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Feel very productive at work	2017 Online survey (G)	G56 How productive do you feel at work?	G56 = "Very productive"	(G) July 2017
	2018 Online survey (G)			(G) July 2018
Received promotion	2017 Online survey (G)	G57 During the last 12 months, have you been given a promotion or more responsibility at work?	G57 = "Yes"	(G) July 2017
	2018 Online survey (G)			(G) July 2018
Job search very likely	2017 Online survey (G)	G64 Taking everything into consideration, how likely are you to make a genuine effort to find a job with a new employer (outside the university) within the next year?	G64 = "Very likely"	(G) July 2017
	2018 Online survey (G)			(G) July 2018
Job search somewhat / very likely	2017 Online survey (G)	G64 Taking everything into consideration, how likely are you to make a genuine effort to find a job with a new employer (outside the university) within the next year?	G64 = "Very likely" or "Somewhat likely"	(G) July 2017
	2018 Online survey (G)			(G) July 2018
Productivity index	2016 Online survey (A) 2017 Online survey (G) 2018 Online survey (G) Human resources data (C)	All productivity-related questions described above.	First principle component of all productivity-related measures listed in this table	(A) July 2016
				(G) July 2017
				(G) July 2018
				(C) May 30, 2016
				(C) August 15, 2017
Total spending (dollars/month)	Health Insurance Claims Data (B)	N/A	Monthly Average	Pre-period: 7/1/15 - 7/31/16
				Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19
Drug spending	Health Insurance Claims Data (B)	N/A	Monthly Average	Pre-period: 7/1/15 - 7/31/16
				Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19
Office spending	Health Insurance Claims Data (B)	N/A	Monthly Average	Pre-period: 7/1/15 - 7/31/16
				Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19
Hospital spending	Health Insurance Claims Data (B)	N/A	Monthly Average	Pre-period: 7/1/15 - 7/31/16
				Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19

TABLE A.14: Variable Definitions

Variable Name	Data Source	Survey Question(s)	Formula	Time Period
Non-zero medical spending	Health Insurance Claims Data (B)	N/A	Monthly Average	Pre-period: 7/1/15 - 7/31/16 Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19
IL Marathon/10K/5K	Human Resources Data (C)	N/A	Pre-period: participated in <i>at least one</i> event during 2014 - 2016	Pre-period: April 2014 - April 2016 Post-periods: April 2017 April 2018
Campus gym visits (days/year)	Human Resources Data (C)	N/A	Number of visits to gym, measured by ID card swipe-in	Pre-period: 7/1/15 - 7/31/16 Post-periods: 8/1/16 - 7/31/17 8/1/16 - 1/31/19

Notes: Variable definitions are based on our pre-analysis plan, which is available at <http://www.socialscienceregistry.org/trials/1368>. All survey-based variables were prespecified. The following variables were not prespecified: job title change, job promotion, productivity index, drug spending (claims), office spending (claims), hospital spending (claims), and IL Marathon/10K/5K.

APPENDIX B: COMPARISON WITH PRIOR LITERATURE—FURTHER DETAILS

We compiled all treatment effects estimates for health care costs and absenteeism from the studies included in the following review articles on wellness programs: [Baicker, Cutler, and Song \(2010\)](#); [Baxter et al. \(2014\)](#); [Lerner et al. \(2013\)](#); [Osilla et al. \(2012\)](#); [Soler et al. \(2010\)](#). There are two additional articles included below that are not featured in these review articles: [Moore, LoGerfo, and Inui \(1980\)](#) and [Bernacki, Tao, and Yuspeh \(2006\)](#). For each study, we identify the outcome of interest, i.e., health care costs (HCC) or absenteeism (ABS). We also indicate whether the study estimated a treatment-on-the-treated (TOT) or an intent-to-treat (ITT) effect.

If a study includes only a treatment and control group, we report the levels for each, T_1 and C_1 , respectively. We use the level for the control group as the counterfactual level (CF level). We then calculate the effect as $T_1 - C_1$ and the percent change as the effect divided by the counterfactual level.

Some studies also include pre- and post-levels for the treatment and control, T_0 and C_0 , respectively. In those cases, we calculate the effect as $(T_1 - T_0) - (C_1 - C_0)$, and the counterfactual level as T_1 minus the effect. The percent change is still calculated as the effect divided by the counterfactual level.

Finally, some studies only include pre- and post-levels for the treatment group. In those cases, the effect is calculated as $T_1 - T_0$; the counterfactual level is T_0 , and the percent change is again the effect divided by the counterfactual level.

For entries with a "+" mark, we have taken the results as directly reported in an appendix table from [Baicker, Cutler, and Song \(2010\)](#).

APPENDIX C: MULTIPLE HYPOTHESIS TESTING

METHODOLOGY

Multiple hypotheses arise when there are multiple outcomes of interest, multiple subgroups of interest, multiple independent variables of interest, or some combination thereof. Consider testing $K > 1$ different null hypotheses. The family-wise error rate (FWER) is the probability of rejecting at least one true null hypothesis (i.e., a “false discovery”) belonging to this “family” of K hypotheses. A procedure is said to provide strong control of the FWER if it does not depend on which of the K null hypotheses happen to be true.

We estimate the FWER using the free step-down resampling method of [Westfall and Young \(1993\)](#) (Algorithm 2.8, p. 66–67). The procedure consists of the following steps:¹

1. Estimate $\{\widehat{\beta}_1, \widehat{\beta}_2, \dots, \widehat{\beta}_K\}$. Estimate the conventional, unadjusted p -values $\{p_1, p_2, \dots, p_K\}$ that correspond to separately testing each null hypothesis $\widehat{\beta}_k = 0$. Without loss of generality, assume the estimated p -values are indexed such that $p_1 \leq p_2 \leq \dots \leq p_K$.
2. Draw with replacement from the dataset to create a bootstrap sample.
 - (a) Estimate $\{\widehat{\beta}_{i1}^*, \widehat{\beta}_{i2}^*, \dots, \widehat{\beta}_{iK}^*\}$. Estimate the conventional, unadjusted p -values $\{p_{i1}^*, p_{i2}^*, \dots, p_{iK}^*\}$ that correspond to separately testing each null hypothesis $\widehat{\beta}_{ik}^* = \widehat{\beta}_k$. The k index here corresponds to the ranking computed in step 1. It will not generally be the case that $p_{i1}^* \leq p_{i2}^* \leq \dots \leq p_{iK}^*$.
 - (b) Enforce monotonicity with respect to the original ordering in step 1 by computing the successive minima:

1. Our program was written in Stata and is easily applied to other settings. The module can be obtained by typing “`ssc install wyoung, replace`” at the Stata prompt or by downloading directly from ideas.repec.org/c/boc/bocode/s458440.html. The latest developer’s version is available on GitHub at www.github.com/reifjulian/wyoung.

$$\begin{aligned}
q_{iK}^* &= p_{iK}^* \\
q_{i,K-1}^* &= \min(q_{iK}^*, p_{i,K-1}^*) \\
q_{i,K-2}^* &= \min(q_{i,K-1}^*, p_{i,K-2}^*) \\
&\vdots \\
&\vdots \\
q_{i1}^* &= \min(q_{i2}^*, p_{i1}^*).
\end{aligned}$$

3. Repeat step 2 N times. For each bootstrap sample i and hypothesis k , define the indicator $COUNT_{ik} = 1$ if $q_{ik}^* \leq p_k$ and 0 otherwise.²

4. For each hypothesis $k = 1, 2, \dots, K$, calculate the fraction of successive minima that were lower than the original p -value:

$$r_k = \frac{1}{N} \sum_{i=1}^N COUNT_{ik}.$$

5. Enforce monotonicity using successive maximization to calculate the adjusted p -value:

$$\begin{aligned}
p_1^{adj} &= r_1 \\
p_2^{adj} &= \max(r_1, r_2) \\
&\vdots \\
&\vdots \\
p_K^{adj} &= \max(r_{K-1}, r_K).
\end{aligned}$$

This resampling algorithm exhibits strong control of the FWER under subset pivotality, which is a multivariate generalization of pivotality.³ This condition requires that the mul-

2. To compute “single-step” p -values instead of “step-down” p -values, define the indicator $COUNT_{ik} = 1$ if $\min\{p_{i1}^*, p_{i2}^*, \dots, p_{iK}^*\} < p_k$ and 0 otherwise. Resampling-based single-step methods often control family-wise type III (sign) error rates. Whether their step-down counterparts also control type III error rates is unknown (Westfall and Young 1993, p. 51).

3. The sampling distribution of a pivotal statistic does not depend upon which distribution generated the data; the t -statistic is a common example.

tivariate distribution of any subvector of p -values is unaffected by the truth or falsehood of hypotheses corresponding to p -values not included in the subvector. The condition is satisfied in many settings, including testing the significance of coefficients in a general multivariate regression model with possibly non-normal or heteroskedastic errors ([Westfall and Young 1993](#), p. 122–123).

It is possible for this algorithm to produce adjusted p -values that are smaller than unadjusted p -values. For example, consider the extreme case where the number of bootstraps is equal to one (so that $N = 1$ in steps 3 and 4). Then all adjusted p -values are equal to either zero or one. The ones that are equal to zero will, of course, be smaller than the unadjusted values. For this reason, we recommend employing a large number of bootstraps. [Westfall and Young \(1993\)](#) recommend at least 10,000 bootstrap draws. If adjusted p -values remain significantly smaller than the unadjusted p -values, even when the number of bootstraps is large, this may indicate model misspecification. For example, in simulations with clustered errors (described below), we found that adjusted p -values are frequently smaller than unadjusted values when we fail to employ a cluster bootstrap.

We ran four different sets of simulations to evaluate the effectiveness and statistical power of this resampling algorithm. Let μ be a ten-dimensional zero vector $(0, 0, \dots, 0)'$. Let I be a 10×10 identity matrix. Let Σ be a 10×10 covariance matrix where all off-diagonal elements are equal to 0.9. The data-generating process for each simulation scenario is described below:

1. Normal i.i.d. errors (ten outcomes)

$$e \sim \mathcal{N}(\mu, I)$$

$$Y = e$$

2. Normal i.i.d. errors (one outcome, ten subgroups)

$$e \sim \mathcal{N}(0, 1)$$

$$Y = e$$

3. Correlated errors (ten outcomes)

$$X \sim \mathcal{N}(\mu, I)$$

$$e \sim \mathcal{N}(\mu, \Sigma)$$

$$Y = 0.2X + e$$

4. Lognormal, mean-zero i.i.d. errors (ten outcomes)⁴

$$e \sim \exp[\mathcal{N}(\mu, I)] - \sqrt{\exp[1]}$$

$$Y = e$$

We simulated 2,000 datasets for each of these four data-generating processes. In each of these 2,000 simulations, we estimated a series of 10 regressions:

$$Y_i = \alpha + \beta_i X_i + \varepsilon_i, i = 1 \dots 10.$$

The sample size for each regression was 100. The regressor $X_i \sim N(0, 1)$ in simulations 1, 2, and 3. In scenario 4, the regressor is just a constant equal to one (α is omitted). There are ten null hypotheses that correspond to these ten regressions: $\beta_i = 0, i = 1, \dots, 10$. These ten null hypotheses are all true in scenarios 1, 2, and 4; the hypotheses are all false in scenario 3 (correlated errors).

Table C.1 compares the effectiveness of the Westfall-Young resampling algorithm to other well-known multiple inference adjustment methods.⁵ Each column in the table reports how often at least one null hypothesis was rejected using each adjustment method. When outcomes are independent and normally distributed, the probability that at least one of the ten hypotheses is statistically significant is equal to $1 - (1 - 0.05)^{10} = 0.401$. This calculation

4. The mean of the standard lognormal distribution is $\sqrt{\exp[1]}$.

5. The Bonferroni-Holm and Sidak-Holm (step-down) p -values are calculated as follows. Sort the K unadjusted p -values so that $p_1 \leq p_2 \leq \dots \leq p_K$. The Bonferroni-Holm adjusted p -values are calculated as $\{p_1 K, \max[p_1, p_2(K-1)], \dots, \max[p_{K-1}, p_K]\}$. The Sidak-Holm adjusted p -values are calculated as $\{1 - (1 - p_1)^K, \max[p_1, 1 - (1 - p_2)^{(K-1)}], \dots, \max[p_{K-1}, p_K]\}$. If the calculation yields a value larger than one, then the adjusted p -value is set equal to one.

accords well with the simulation: the first row of column (1) reports that at least one of the ten hypotheses was rejected at $\alpha = 0.05$ in 39.8 percent of the 2,000 simulations when no adjustment was performed. By contrast, the Bonferroni-Holm, Sidak-Holm, and Westfall-Young adjustments reject at least one null hypothesis only about 4 percent of the time, thus achieving a FWER of less than 5 percent.

In column (2), the ten hypotheses arise from examining multiple subgroups rather than multiple outcome variables. Failing to adjust the p -values again results in a high rejection rate of nearly 40 percent. The Bonferroni-Holm, Sidak-Holm, and Westfall-Young adjustment methods, however, all achieve rejection rates of around 5 percent.

The downside of the Bonferroni-Holm and Sidak-Holm adjustment methods is that they assume outcomes are independent and therefore can be too conservative when outcomes are correlated. This is demonstrated in column (3), which reports rejection rates for a scenario where the ten null hypotheses are all false. Here, the Bonferroni-Holm and Sidak-Holm methods reject at least one hypothesis only about 35 percent of the time. The Westfall-Young resampling algorithm, however, achieves a rejection rate in excess of 50 percent.

Although traditional adjustment methods such as Bonferroni-Holm and Sidak-Holm are generally thought to be conservative, [Westfall and Young \(1993\)](#) emphasize that these traditional methods can actually over-reject when the data-generating process is nonnormal. This is demonstrated in column (4): the resampling method of Westfall-Young achieves a FWER of under 6 percent, but the Bonferroni-Holm and Sidak-Holm methods reject at least one null hypothesis over 20 percent of the time.

Clustered Standard Errors

[Westfall and Young \(1993\)](#) do not discuss how to perform multiple inference in regression models where observations can be grouped into clusters, with model errors correlated within clusters. The presence of clustered errors does not violate subset pivotality, which is automatically satisfied in linear regression models. However, in this case it is important that the resampling in step 2 of the procedure be done over entire clusters rather than individ-

ual observations. This is accomplished by specifying the `cluster()` option of the `wyoung` command.

We demonstrate the importance of resampling over clusters by performing another set of simulations. Again, let μ be a ten-dimensional zero vector $(0, 0, \dots, 0)'$, and let I be a 10×10 identity matrix. The data-generating process for this simulation scenario is

5. Serially correlated errors (ten outcomes)

$i = 1 \dots 100$ clusters

$t = 1 \dots 10$ time periods

$$\eta_i \sim \mathcal{N}(\mu, I)$$

$$e_{it} \sim \mathcal{N}(\mu, I)$$

$$Y_{it} = \eta_i + e_{it}$$

We again simulated 2,000 datasets. In each simulation, we estimated the following ten regressions:

$$Y_{it} = \alpha + \beta_i D_{it} + \varepsilon_{it}, i = 1 \dots 10,$$

where the dummy variable $D_{it} = 1\{t > START_i\}$ and $START_i$ is a Poisson random variable with mean equal to five. We estimated these regressions under two different assumptions about the standard errors (homoskedastic or clustered) and with and without a bootstrap cluster. Our results are reported in Table [C.2](#).

Comparing column (2) to column (1) in the first row of Table [C.2](#) shows that estimating the model using clustered standard errors results in a smaller FWER relative to a model that assumes errors are homoskedastic. Nevertheless, the rejection rate for the unadjusted value in column (2) still significantly exceeds 5 percent because this specification does not account for the number of hypotheses being tested.⁶

6. By construction, the values in columns (2) and (3) are identical in the first three rows because these two columns vary only the bootstrapping methodology, which matters only for the Westfall-Young correction.

The second and third rows of Table C.2 show that the Bonferroni-Holm and Sidak-Holm corrections achieve a 5 percent rejection rate when the standard errors are clustered. This is unsurprising since the outcome variables in this simulation are independent.

The fourth row of Table C.2 demonstrates the importance of properly accounting for clustered standard errors when implementing the Westfall-Young correction. Column (2) shows that (erroneously) employing a simple bootstrap that resamples over individual observations causes the Westfall-Young correction to perform worse than even the unadjusted specification. However, column (3) shows that the Westfall-Young correction achieves a 5 percent rejection rate when the cluster bootstrap is employed.

TABLE C.1: Family-wise rejection proportions at $\alpha = 0.05$

	(1)	(2)	(3)	(4)
Adjustment method	Normal errors	Multiple subgroups	Correlated errors	Lognormal errors
Unadjusted	0.398	0.387	0.685	0.577
Bonferroni-Holm	0.040	0.047	0.344	0.234
Sidak-Holm	0.040	0.051	0.347	0.237
Westfall-Young	0.041	0.045	0.513	0.058
Num. observations	100	100	100	100
Num. hypotheses	10	10	10	10
Hypotheses are true	Y	Y	N	Y

Notes: Table reports the fraction of 2,000 simulations where at least one null hypothesis in a family of 10 hypotheses was rejected. All hypotheses are true for the simulations reported in columns (1), (2), and (4), i.e., lower rejection rates are better. All hypotheses are false for the simulation reported in column (3), i.e., higher rejection rates are better. The Westfall-Young correction is performed using 1,000 bootstraps.

TABLE C.2: Family-wise rejection proportions at $\alpha = 0.05$, when the data generating process is serially correlated

	(1)	(2)	(3)
Unadjusted	0.652	0.401	0.401
Bonferroni-Holm	0.187	0.049	0.049
Sidak-Holm	0.188	0.049	0.049
Westfall-Young	0.191	0.498	0.046
Num. observations	1,000	1,000	1,000
Num. hypotheses	10	10	10
Model std. errors	Homoskedastic	Clustered	Clustered
Cluster bootstrap	N	N	Y

Notes: Table reports the fraction of 2,000 simulations where at least one null hypothesis in a family of 10 hypotheses was rejected. The difference between columns (1) and (2) is the assumption about the standard errors (homoskedastic or clustered). The difference between columns (2) and (3) is the method of bootstrapping (resampling over individual observations versus clusters), which matters only for the Westfall-Young correction. All null hypotheses are true, i.e., lower rejection rates are better. Each simulation generated 100 panels (clusters) with 10 time periods. The Westfall-Young correction is performed using 1,000 bootstraps.

D.1. Sample Selection and Study Overview

We designed and implemented a randomized controlled trial of an employee wellness program called iThrive at the University of Illinois at Urbana-Champaign. To participate in the study, university employees had to first digitally sign an informed consent form and complete an online baseline survey (described below). Employees who completed the baseline survey received a \$30 Amazon.com gift card. Participants were subsequently randomly assigned either to a control group or to one of six different treatment groups. Treatment groups differed only in the amount of financial rewards that participants were offered: \$0, \$100, or \$200 for completing a health screening and online health risk assessment (HRA) and \$25 or \$75 for each completed round of wellness activities. Treatment group participants were informed of their reward amounts at the time of their assignment.

Contact with members of the control group was minimized whenever possible. Participants in the control group were aware that they were participating in a study exploring “the link between wellness program incentives and program participation and health outcomes among employees,” as stated in their informed consent form, but the details of the program and the size of the incentives for those in the treatment group was not revealed to them. Nevertheless, it is likely that many members of the control group were aware that others on campus were participating in wellness activities and were receiving rewards for doing so.

The 2016-2017 iThrive wellness program had three main components:

1. Health screening (August 15–September 16)
2. Online HRA (September 8–October 4)
3. Wellness activities
 - (a) Fall 2016 (October 10–December 16)
 - (b) Spring 2017 (January 31–April 25)

Steps 1 and 2 were mandatory. Participants who failed to complete them received no rewards and were not allowed to participate in subsequent wellness activities. Participants who successfully completed steps

1 and 2 were given the opportunity to participate in fall and spring wellness activities. Participation in fall activities was not required in order to participate in the spring activities.

The 2017–2018 iThrive wellness program maintained the same structure as the 2016–2017 program and then concluded with a final health screening:

1. 2017 health screening (August 21–September 22)
2. 2017 online HRA (August 21–September 22)
3. Wellness activities
 - (a) Fall 2017 (October 16–December 15)
 - (b) Spring 2018 (February 5–April 26)
4. 2018 health screening (August 21–September 22)

Appendix Figures [D.1](#) and [D.2](#) illustrate the experimental design of the Illinois Workplace Wellness Study. The control group was invited to complete the 2017 (12-month follow-up) and 2018 (24-month follow-up) health screenings and online surveys. The control group was not allowed to participate in the 2016 (baseline) health screening. In addition, the control group was never allowed to participate in any of the online HRAs or in any of the iThrive fall and spring wellness activities.

The relationship between the different datasets employed in our study is illustrated in Appendix Figure [D.3](#). Because some of the steps in the study were required in order to continue participating (e.g., taking the baseline survey), the datasets collected in later periods are often only available for a strict subset of participants from previous periods. For example, 2016 health screening data are available for any treatment group member who completed a wellness activity in the first year of the program, but some people who completed the 2016 health screening were ineligible to sign up for a wellness activity because they did not complete the 2016 HRA.

D.1.1. 2016 Online Baseline Survey (July 11–July 31)

The University of Illinois provided us with a list of 12,486 active employees who met the following criteria as of June 10, 2016: (1) employed at the Urbana-Champaign campus (specifically, those with a University of Illinois System HR “District/Division” code of UIUC, as opposed to UIC or UIS); and (2) eligible for part- or full-time employee benefits from the Illinois Department of Central Management Services. This list included first and last names, mailing addresses, and email addresses. We dropped records that did not include a university email and also dropped members of the research team, their family members, and other individuals heavily involved in the study. Following these exclusions, we were left with a total of 12,459 employees.

We mailed a postcard (see Appendix Figure D.4) on July 6, 2016, to each of these 12,459 employees, informing them that they would receive an invitation to participate in an online survey for the Illinois Workplace Wellness Study. We included the UIUC-affiliated members of the research team in this mailing and confirmed that the postcards were delivered by July 9, 2016. The provost of UIUC sent an email on the morning of July 11 to these employees indicating the university’s support for the study (see Appendix Figure D.5).

An email invitation (see Appendix Figure D.6) containing the link to the online baseline survey was sent to each of the 12,459 employees on the morning of July 11, shortly after the email from the provost. Reminder emails were sent on July 19, July 27, and August 1 to employees who had not yet completed the survey. The survey closed at noon on August 1, at which point 4,834 employees had successfully completed it. Participants who completed the survey immediately received a confirmation email (see Appendix Figure D.7). They also received an electronic \$30 Amazon.com gift card about one week after completing the survey (see Appendix Figure D.8).

D.1.2. 2016 Study Randomization (August 1–August 8)

We randomly assigned 3,300 of the 4,834 employees who completed the online baseline survey to one of six different iThrive treatment groups, denoted A25, A75, B25, B75, C25, and C75. Treatment groups differed only in the size of incentives offered for completing various steps of the iThrive program. Treated

individuals in groups beginning with the letter A, B, or C were offered \$0, \$100, or \$200, respectively, for completing the health screening and online HRA portions of the experiment. The second part of the treatment group name, 25 or 75, indicates the reward amount offered for each round (spring and/or fall) of wellness activities the individual completed.

For randomization, the sample was stratified by six baseline, demographic “strata” variables: (1) employee class (faculty, academic staff, or civil service); (2) sex (male or female); (3) age, as of the baseline survey launch date of July 11, 2016 (≤ 36 , $37 - 49$, or ≥ 50); (4) above or below median annual salary; (5) quartile of annual salary; and (6) race (white or nonwhite). To create the strata, we sequentially split the sample in the order listed above for these strata variables. At each step in this sequence, we would only split a cell by the next strata variable if doing so resulted in cell sizes of at least 20. This ensured that, for every stratum, at least two employees could be assigned to the control and each of the six treatment groups (i.e., $20 \cdot p_{A,B,C} \cdot p_{25,75} > 2$, where $p_{A,B,C} \cdot p_{25,75}$ is the proportion of each stratum assigned to each treatment arm, as described below). This stratification process resulted in 69 strata, with the sample size per stratum ranging from 20 to 251.

Within each stratum, a proportion $p_{A,B,C} = 1100/4834 \approx 0.228$ of employees were randomly selected to be offered one of the three levels of incentive tied to completing the screening and HRA (\$0, \$100, and \$200). This randomization was done such that exactly 1,100 employees in total would be assigned to each of these three levels of screening incentive. Next, within each stratum and screening incentive level, a proportion $p_{25,75} = 0.5$ of employees were randomly selected to be offered each of the two levels of activity incentive (\$25 or \$75). This resulted in six treatment groups with the following sample sizes: A25 ($N = 551$), A75 ($N = 549$), B25 ($N = 552$), B75 ($N = 548$), C25 ($N = 551$), and C75 ($N = 549$).

D.1.3. 2016 Health Screening (August 15–September 16)

We sent email invitations on August 9, 2016, to the 3,300 participants randomly selected to participate in iThrive. This email informed them of their selection and their monetary rewards for completing the different parts of the iThrive program and explained how to sign up for a health screening (see Appendix Figure D.9). We also mailed postcards to these participants (Appendix Figure D.10) informing them of

their selection. The postcards did not specify the monetary amounts and were delivered a few days after the initial email invitation. We sent reminder emails on August 12, August 23, and September 12 to participants who had not yet signed up for a health screening. Each of these participants was given login access to the iThrive website (see Appendix Figure D.11 and Appendix Figure D.12), which provided them with information about the iThrive program and reported on their progress throughout the year.

Health screenings were offered at seven different locations on the UIUC campus and also at Presence Covenant Medical Center, located about one mile away from the center of campus. A map displaying these locations is available in Appendix Figure D.13. Participants signed up for a date and time to receive their health screening using an online appointment scheduler (see Appendix Figure D.14).¹

Appointments were available Monday through Saturday, from August 15 to September 16, with the exception of Saturday, September 3 and Monday, September 5 (Labor Day). Appointment times were generally available from 6:00 a.m. until 10:50 a.m. Only one campus location was available each day. The full schedule of appointment times and locations is displayed in Appendix Table D.1.

Participants who successfully signed up for an appointment received a confirmation email containing the date, time, and a link to a map of their appointment's location. The online appointment scheduler sent participants an automated reminder email 24 hours prior to their appointment (see Appendix Figure D.15) and an automated text message if they had provided their cell phone number when making their appointment. We also sent participants a reminder email emphasizing that they should “not have anything to eat or drink (besides water) for 12 hours” before the health screening (see Appendix Figure D.16).

Upon showing up for their appointment, participants were asked to provide a form of identification, to sign a second informed consent form, and to complete a brief questionnaire (see Appendix Figure D.17) concerning their beliefs about their health status.² Participants then filled out the top half of a health screening form (Appendix Figure D.18) and were subsequently then directed to an open “station” where a clinician from Presence Covenant Medical Center measured their height, weight, waist circumference, and

1. A small number (less than ten) of participants showed up for a health screening without an appointment, but we were able to accommodate them.

2. The ID was not a formal requirement, so in the small number of cases where participants did not have an ID, we allowed them to receive their health screening anyway. Fraud was not a concern because (1) participants had to make appointments online in their name prior to their arrival and (2) all reward payments were made later in the study by direct deposit via university payroll.

blood pressure. Next, they obtained blood chemistry measurements using the CardioChek Plus Analyzer, which is manufactured by PTS Diagnostics. This fingerstick measures cholesterol (total, HDL, and LDL), triglycerides, and glucose. All measures were recorded on the health screening form. At the end of the screening, a health coach reviewed the results with each individual participant in private. Depending on the measures, participants were sometimes recommended to make minor lifestyle changes or to seek medical attention (see Appendix Figure D.19 for the guidelines employed by the health coach). Recommendations were recorded on the health screening form. Upon departure, participants were given a carbon copy of their health screening form and a postcard reminding them to check their email for an invitation to take the online HRA (Appendix Figure D.20). The HRA was available as early as one week after the beginning of biometric screening and remained open until two weeks after the last screening. From start to finish, the entire health screening lasted, on average, for about 20 minutes.

D.1.4. 2016 Online Health Risk Assessment (September 8–October 4)

After completing their health screening, participants were invited over email to complete an online HRA (Appendix Figure D.21). We sent reminder emails on September 21 and September 29 to participants who had not yet completed their online HRA. After completing the survey, participants received a confirmation email from us within a few days.

The server hosting the survey became overloaded with requests on the first day of the survey (September 8), causing many participants to experience technical problems and to be unable to complete the survey. This was fixed within 24 hours, although a small number of participants continued to report difficulties taking the HRA throughout the survey period. Nevertheless, 97 percent of participants who completed the health screening managed to complete the online HRA, so these technical glitches do not appear to have caused major difficulties for participants.

D.1.5. 2016 Fall Wellness Activities (October 10–December 16)

We sent email invitations for the fall 2016 wellness activities on September 27 to participants who had successfully completed their online HRA (Appendix Figure D.22).³ Participants were able to sign up for activities immediately via the iThrive website, but no activities began before October 10. Appendix Table D.2 lists the different activities that were available. Most classes were filled to capacity, and nearly 80 percent of people who registered were signed up for HealthTrails, which had unlimited capacity.

Out of 1,848 people eligible to participate, 1,304 people signed up for a wellness activity, and 903 people successfully completed them. People who completed an activity received either \$25 or \$75, paid by direct deposit via university payroll, depending on which treatment group they had been assigned to.

D.1.6. 2017 Spring Wellness Activities (January 31–April 25)

We sent email invitations for the spring 2017 wellness activities on January 17 to participants who had successfully completed their online HRA (Appendix Figure D.23). Participants did not have to complete a fall activity to be eligible to participate in a spring activity. Participants were able to sign up for activities immediately via the iThrive website, and activities began on January 31. Appendix Table D.3 lists the different activities that were available. Most classes were filled to capacity, and over 75 percent of people who registered were signed up for Spring Into Motion, which had unlimited capacity.

Out of 1,848 people eligible to participate, 1,059 people signed up for a wellness activity, and 740 people successfully completed them. People who completed an activity received either \$25 or \$75, paid by direct deposit via university payroll, depending on which treatment group they had been assigned to.

D.1.7. 2017 Online Follow-Up Survey (July 10–August 9)

We mailed a postcard (see Appendix Figure D.24) to 4,824 participants in our study on July 5, 2017.⁴ We included the UIUC-affiliated members of the research team in this mailing and confirmed the postcards

3. We sent a separate invitation on October 3 to the small number of participants who completed their online HRA after September 27.

4. A total of 4,834 participants completed the 2016 baseline survey, but 10 had subsequently withdrawn from the study at the time of this invitation.

were delivered by July 8, 2017.

We sent an email invitation (see Appendix Figure D.25) containing the link to the online follow-up survey to each of the 4,824 study participants on the morning of July 10. Reminder emails were sent on July 18, July 26, August 2, and August 7 to participants who had not yet completed the survey. The survey closed at 10:20 a.m. on August 9, at which point 3,561 study participants (73.7 percent) had successfully completed it.⁵ Participants who completed the survey immediately received a confirmation email, and they also received an electronic \$20 Amazon.com gift card about one week after completing the survey. The confirmation email and gift card were formatted similarly to the ones employed for the initial baseline survey (see Appendix Figures D.7 and D.8).

The August 2 reminder informed participants that ten people who completed the follow-up survey would be chosen at random to receive a \$100 Amazon.com gift card (see Appendix Figure D.26). This new potential reward was in addition to the guaranteed \$20 Amazon.com gift card. Participants who had already completed the survey prior to August 2 were included in this drawing.

D.1.8. 2017 Follow-Up Health Screening (August 21–September 22)

All study participants, whether in the control or treatment groups, were eligible to complete the one-year follow-up health screening in 2017. We randomly assigned these individuals to one of two groups, which differed only in the size of incentives (\$0 or \$125) offered for completing the follow-up screening.

Our method of randomization for the follow-up screening incentive combined explicit stratification plus rerandomization. Our follow-up strata were constructed by splitting the original strata by study arm. Because there were 69 original strata (see Section D.1.2) and 7 study arms (6 treatment groups plus a control group), this resulted in $483 = 69 \times 7$ follow-up strata, with the sample size per follow-up stratum ranging from 2 to 80.

To implement the stratified rerandomization, we generated multiple potential follow-up treatment assignments T_j as follows:

5. The survey was accidentally reopened later that month for several weeks. Although all participants had been told that the survey would close on August 9, seven participants nevertheless completed the survey after the August 9 deadline, bringing the final number of completions up to 3,568.

1. Draw a random integer s_j and set the random-number seed to equal s_j .
2. Randomly sort all 4,834 original study participants first by follow-up strata and then within each follow-up strata. Drop the individuals ($N = 15$) who had withdrawn from the study at the time of randomization (August 4, 2017), leaving a sample of $N = 4,819$ employees to be randomized.
3. Assign alternating observations to the \$0 and \$125 follow-up screening incentive group, and let T_j denote the resulting vector of treatment assignments for each employee.
4. Test for balance between the \$0 and \$125 groups for 60 variables (predetermined at the time of follow-up randomization) grouped into the following 8 families:
 - (a) baseline strata (6 variables)
 - (b) baseline survey (21 variables)
 - (c) salary and age (3 variables)
 - (d) employment (7 variables)
 - (e) health behavior (6 variables)
 - (f) medical spending and coverage (8 variables)
 - (g) sick days taken (2 variables)
 - (h) registration for or completion of 2016 biometric screening, HRA, or fall 2016 or spring 2017 wellness activities (7 variables)

We performed joint tests for balance by family of outcomes (eight balance tests), plus individual tests for balance for each of the medical spending outcomes, with and without coverage weights for average spending outcomes (ten balance tests). In total, we performed 18 tests for balance, and we denote by p_j^{min} the minimum p -value across these tests.

After performing these steps for $j = 1$ to 10,000, we selected the treatment assignment that maximized the p -value p_j^{min} from the balance tests. Specifically, the selected treatment assignment was chosen to be T_{j^*} , where $j^* = \arg \max_j p_j^{min}$.

In total, 2,409 employees were assigned to the \$0 follow-up screening incentive, while 2,410 employees were assigned to the \$125 follow-up screening incentive. On August 14, 2017, we sent email invitations to these employees ($N = 4,819$) informing them of their monetary reward for completing the 2017 health screening and explained how to sign up for it (see Appendix Figure D.27). We sent reminder emails on August 23, September 5, September 13, September 19, and September 21 to participants who had not yet signed up for a health screening.⁶ The final reminder encouraged participants to walk in for a health screening even if they did not have an appointment (see Appendix Figure D.28).

On August 14, 2017, the iThrive website was updated so that treatment group participants could obtain information about the 2017 follow-up health screening and their potential rewards. For the first time, control group members were also given login access to the iThrive website. Everyone was encouraged to visit the website in the August 14 screening invitation email (Appendix Figure D.27). For control group members, the website only displayed information about the health screenings (see Appendix Figure D.29). For treatment group members, the website displayed information about the subsequent HRA and wellness activities once the treatment group member completed a screening (see Appendix Figure D.30).

Health screenings were held in the same locations as in 2016, with the exception of the Physical Plant Services Building, which was unavailable for reservation. Unlike in 2016, people were allowed to make appointments all the way until 3:50 p.m. The full schedule of appointment times and locations is reported in Appendix Table D.4.

The health screening procedure was nearly identical to the procedure employed in 2016 (see Section D.1.3 for a full description). There were only two substantive differences. First, participants were not handed a postcard at the end of the screening reminding them to check their email for an invitation to take the online HRA. This step was omitted in 2017 because follow-up screening participants in that year included employees from the control group, who were not eligible to take the 2017 online HRA. Second,

6. Study participants who signed up for a screening, but later failed to show up for their appointment, were included in these reminder emails.

health screening confirmation emails were sent only to participants who had been assigned a \$125 reward (see Appendix Figure D.31). Screening participants in both the control and treatment groups who were assigned a \$0 reward did not receive a screening confirmation email. However, all participants could confirm their completion status by visiting the iThrive website.

D.1.9. 2017 Online Health Risk Assessment (August 21–October 6)

Treatment group members who completed the 2017 follow-up health screening were invited to complete an online HRA (Appendix Figure D.32). The format of the 2017 online HRA was the same as the 2016 survey. Reminder emails were sent on September 11, September 18, September 28, October 3, and October 6 to participants who had received the invitation but had not yet completed the assessment as of the reminder date. Unlike in 2016, participants did not have to complete the HRA in order to earn their reward for the health screening they had just completed. But as before, participants had to complete the HRA in order to be eligible to sign up for wellness activities in the fall or spring.

D.1.10. 2017 Fall Wellness Activities (October 16–December 15)

We sent email invitations (Appendix Figure D.33) for the fall 2017 wellness activities on October 2 to participants who had successfully completed their 2017 online HRA. Participants were able to sign up for activities immediately via the iThrive website, but no activities began before October 16. Appendix Table D.5 lists the different activities that were available. Over 70 percent of people who registered were signed up for Walktober.

Out of 1,272 people eligible to participate, 771 people signed up for a wellness activity, and 439 people successfully completed one. Twenty people who completed an activity were randomly selected to receive \$50 Amazon.com gift cards.

D.1.11. 2018 Spring Wellness Activities (February 5–April 26)

We sent email invitations (Appendix Figure D.34) for the spring 2018 wellness activities on January 22 to participants who had successfully completed their 2018 online HRA. Participants were able to sign up

for activities immediately via the iThrive website, but no activities began before February 5. Appendix Table D.6 lists the different activities that were available. Over 60 percent of people who registered were signed up for Keep America Active.

Out of 1,272 people eligible to participate, 607 people signed up for a wellness activity, and 342 people successfully completed one. Twenty people who completed an activity were randomly selected to receive \$50 Amazon.com gift cards.

D.1.12. 2018 Online Follow-Up Survey (July 9–August 7)

We mailed a postcard (similar to the one shown in Appendix Figure D.24) to 4,800 participants in our study on July 5, 2018.⁷ We included the UIUC-affiliated members of the research team in this mailing and confirmed that the postcards were delivered by July 11, 2018.⁸

We sent an email invitation (see Appendix Figure D.35) containing the link to the online follow-up survey to each of the 4,800 study participants on the morning of July 9. Reminder emails were sent on July 18, July 25, and August 6 to participants who had not yet completed the survey. The survey closed at 11:59 p.m. on August 7. A total of 3,020 study participants (62.5 percent) successfully completed the survey.⁹ Participants who completed the survey immediately received a confirmation email. They also received an electronic \$20 Amazon.com gift card about one week after completing the survey. The confirmation email and gift card were formatted similarly to the ones employed for the initial baseline survey (see Appendix Figures D.7 and D.8). Unlike in 2017, participants were not also entered into a gift card drawing in return for completing the 2018 survey.

D.1.13. 2018 Follow-Up Health Screening (August 20–September 21)

All study participants, whether in the control or treatment groups, were eligible to complete the two-year follow-up health screening in 2018. We randomly assigned these individuals to one of two groups,

7. The participants who completed the 2016 baseline survey totaled 4,834, but 34 had subsequently withdrawn from the study at the time of this invitation.

8. Some members of the research team received their postcards on July 9, but one person did not receive it until July 10, and another person did not receive it until July 11.

9. Although we told participants that the survey closed on August 7, the survey links were left active until August 24. Fifteen participants completed the survey between August 8 and 24.

which differed only in the size of incentives (\$0 or \$75) offered for completing the follow-up screening. We employed the same method of randomization as in 2017 (see Section [D.1.8](#)).

In total, 2,399 employees were assigned to the \$0 incentive group, and 2,400 employees were assigned to the \$75 incentive group. We sent email invitations on Monday, August 13 to these employees ($N = 4,799$) to inform them of their monetary reward for completing the 2018 health screening and to explain how to sign up for it (see Appendix Figure [D.36](#)). We sent reminder emails on August 22, September 6, September 12, September 18, and September 20 to participants who had not yet signed up for a screening. The full schedule of appointment times and locations is reported in Appendix Table [D.7](#).

The health screening procedure was nearly identical to the procedure employed in 2017 (see Section [D.1.8](#)). One difference is that the formatting of the health screening form (Appendix Figure [D.37](#)) changed slightly from the previous version of the form (Appendix Figure [D.18](#)). In particular, the “clinician’s comment” text box at the bottom of the 2016/2017 forms was removed from the 2018 form. Thus, these text data are not available in 2018.

D.2. Datasets

D.2.1. University Administrative Data

The University of Illinois provided us with an initial list of 12,459 employees who met the following criteria as of June 10, 2016: (1) located at the Urbana-Champaign campus and (2) eligible for part- or full-time employee benefits from the Illinois Department of Central Management Services. The university administrative datasets described below are available for all 12,459 of these employees.

D.2.1.a. Demographics

This dataset includes first and last names, mailing address, email address, exact date of birth, sex, annual salary, job title, race (white, black, or other), employee class (faculty, academic staff, or civil service), home college (49 colleges), home organization (323 organizations), and exact hire date.

D.2.1.b. Employment History

This dataset includes employment history information up through August 15, 2017. It includes the exact hire date for all employees. Out of the initial sample of 12,459 employees, 1,537 of these employees were no longer actively employed by the university as of August 15, 2017. For these former employees, the dataset includes the exact date of employment termination and the associated reason (resigned, retired, deceased, terminated, contract ended, or other). For active employees, the dataset lists their annual salary and job title as of August 15, 2017.¹⁰ Some employees lack a job title, while others sometimes have multiple job titles. In cases with more than one title, this dataset assigns each title a fraction of the employee's salary.

D.2.1.c. Sick Leave

This dataset includes the number of sick days taken by a civil service employee at the monthly level, for the time period January 2015 through May 2017. For non-civil service employees (i.e., academic staff and faculty), the dataset includes the total number of sick days taken during the two time periods, August 16, 2015, through August 15, 2016; and August 16, 2016, through May 15, 2017. Sick leave for faculty (25 percent of our sample) is self-reported and exhibits little variation: more than 75 percent of the faculty in our sample reported zero days of sick leave during the August 16, 2015, through August 15, 2016, academic year.

The vast majority of employee sick leave is noncompensable (i.e., it cannot be “cashed out” when the employee terminates employment).¹¹ Civil service employees accrue sick leave at the rate of 0.0462 hours for each hour worked, which corresponds to approximately 12 days per year for a full-time employee, and this sick leave is cumulative (i.e., rolls over from one year to the next). Full-time academic staff and faculty earn 12 cumulative and 13 non-cumulative sick leave days per year, and their total sick leave is recorded in the data only twice a year: on May 16 and on August 16.

10. Civil service, academic staff, and faculty received a mid-year salary increase in the second half of February, 2017. The salary increase was explicitly merit based, and the total salary pool was capped at 2 percent of aggregate base salaries.

11. Prior to 1999, employees could accrue compensable sick leave. A few older employees still have positive compensable sick leave balances, but this is very rare.

D.2.1.d. Gym Attendance

This dataset includes a list of the exact dates that each employee visited one of the university’s campus recreational facilities during the time period January 1, 2015 through July 31, 2017. There are three recreational facilities located on the university campus: the Activities and Recreation Center (ARC), the Campus Recreation Center East (CRCE), and the Ice Arena. Membership costs \$40 per month for university employees and retirees. Entering these facilities requires swiping a university identification card through a machine, which is the basis for the observations in this dataset.

D.2.2. Illinois Marathon Data

The Illinois Marathon is a running event held annually in Champaign, Illinois. The races offered include a marathon, a half marathon, a 5K, and a 10K. When registering for a race, a participant must provide her name, age, sex, and hometown. That information, along with the results of the race, are published online after the races have concluded.¹²

We downloaded Illinois Marathon data for the 2014–2018 races and matched it to individuals in our study data using full name, age, sex, and hometown. An individual in our study data was counted as participating in a running event in a given year if either (a) University and Illinois Marathon records matched on full name, age (+/– 1 year), and sex; or (b) University and Illinois Marathon records matched on the first two letters of last name, age (+/– 1 year), sex, and hometown. Among university employees that match to the Illinois Marathon records using either match measure, both measures generate a match in 73.7, 74.6, 84.4, 79.6, and 77.6 percent of cases for the years 2014, 2015, 2016, and 2017, respectively.

D.2.3. Health Insurance Claims Data

We obtained health insurance claims data for 8,461 university employees (anonymized for non-study participants) who were listed in our university administrative dataset and who were members of Health Alliance at any point during the period January 1, 2015, through January 31, 2019. (Note: 8,096 employees were members during the pre-period July 1, 2015, through July 31, 2016.) The dataset includes all

12. See <http://illinoismarathon.com/resultscertificatesphotos/#results>.

inpatient, outpatient, and prescription drug claims with a date of service between January 1, 2015, through June 30, 2017. Each claim lists a date of service, a physician specialty code, a place of service code, and the total allowed amount, which is the sum of payments to the provider from both the insurer and the beneficiary. Health Alliance also provided an enrollment file listing start and end dates for each member.

Health Alliance, the university's most popular insurer, operates an HMO plan with a \$0 medical deductible and a \$100 annual pharmacy deductible. Physician visits require a \$20 copay, and the plan's out-of-pocket maximum is \$3,000 for the individual and \$6,000 for the family.

The university offers seven different health insurance plans. One of these, Quality Care Health Plan, is a traditional indemnity insurance plan.¹³ The rest are managed care plans, including four Health Maintenance Organizations (BlueAdvantage HMO, Coventry HMO, Health Alliance HMO, and HMO Illinois) and two Open Access Plans (Coventry OAP and HealthLink OAP). Beginning July 1, 2017, Coventry HMO and Coventry OAP were renamed Aetna HMO and Aetna OAP.

Employee contributions are the same for all HMO plans and depend on income. For the 2016–2017 plan year, an employee's monthly contribution for an HMO plan ranged from \$68 per month (annual salary \$30,200 and below) up to \$186 per month (annual salary \$100,001 and above). Contributions for an employee enrolled in Quality Care Health Plan ranged from \$93 per month (annual salary \$30,200 and below) up to \$211 per month (annual salary \$100,001 and above). The seven health plans charge different contributions for dependents, with dependent contributions ranging from \$96 per month (BlueAdvantage HMO) to \$249 per month (Quality Care Health Plan).

Vision insurance is automatically provided for free to enrollees in one of the university's health insurance plans. EyeMed Vision Care is the administrator for the vision coverage. University employees enrolled in these health plans are also eligible to enroll into the university's (separate) dental plan. As of July 1, 2017, dental premiums were \$11 per month for an employee, \$17 per month for an employee and one dependent, and \$19.50 per month for an employee and two dependents. Delta Dental of Illinois is the administrator for the dental plan.

13. This plan was administered by Cigna up through June 30, 2017. Aetna has administered it since July 1, 2017.

D.2.4. Online Survey Data

D.2.4.a. 2016 Baseline Survey

The baseline survey was administered online using survey software provided by SurveyGizmo. An email invitation containing the link to the online baseline survey was sent to 12,459 university employees. Each link was unique and pointed to a survey that could only be completed once. Survey participants navigated the survey by clicking on buttons labeled “Next” and “Back.” They were allowed to skip questions and to change their answers on previous pages if so desired. In order to receive their \$30 Amazon.com gift card, participants had to navigate to the end of the survey and click the “Submit” button. The software did not allow them to change their answers once the survey was submitted. Participants who exited the survey prior to completion could continue from where they left off by clicking on their invitation link again.

The software recorded that 7,468 employees clicked on the link to the survey, 4,918 employees began the survey, and 4,834 employees successfully completed the survey. Among those who completed the survey within an hour of clicking on the survey link for the first time, the average completion time was 15 minutes.

In order to assess the reliability of the survey, we compared participants’ self-reported ages from the survey with the ages available in the university’s administrative data. Of the 4,830 participants who reported an age, only 24 (< 0.5 percent) reported a value that differed from the university’s data by more than one year.

D.2.4.b. 2017 Follow-Up Survey

The 2017 follow-up survey was administered online using survey software provided by SurveyGizmo. An email invitation containing the link to the follow-up survey was sent to 4,824 study participants.¹⁴ The format of the invitation email and the survey were similar to the 2016 baseline survey. In order to receive their \$20 Amazon.com gift card, participants had to navigate to the end of the survey and click the “Submit” button.

The software recorded that 3,642 employees clicked on the link to the survey, 3,611 employees began

14. A total of 4,834 participants completed the 2016 baseline survey, but 10 had subsequently withdrawn from the study at the time of the 2017 survey invitation. Another 5 participants withdrew over the course of the 2017 survey period, so the total number of subjects in our second-year sample is equal to 4,819.

the survey, and 3,567 employees successfully completed the survey. Among those who completed the survey within an hour of clicking on the survey link for the first time, the average completion time was 13.3 minutes. The completion rates for the control and treatment groups were 75.4 and 73.1 percent, respectively. The difference in completion rates is marginally significant ($p = 0.079$).

In order to assess the reliability of the survey, we compared participants' self-reported ages from the survey with the ages available in the university's administrative data. Of the 3,561 participants who reported an age, only 20 (< 0.6 percent) reported a value that differed from the university's data by more than one year.

D.2.4.c. 2018 Follow-Up Survey

The 2018 follow-up survey was administered online using survey software provided by SurveyGizmo. An email invitation containing the link to the follow-up survey was sent to 4,800 study participants.¹⁵ The format of the invitation email and the survey were similar to the 2016 baseline survey. In order to receive their \$20 Amazon.com gift card, participants had to navigate to the end of the survey and click the "Submit" button.

The software recorded that 3,120 employees clicked on the link to the survey. In total, 3,020 employees successfully completed the survey. Among those who completed the survey within an hour of clicking on the survey link for the first time, the average completion time was 16.9 minutes. The completion rates for the control and treatment groups were 64.6 and 61.5 percent, respectively. This difference in completion rates is statistically significant ($p = 0.036$).

In order to assess the reliability of the survey, we compared participants' self-reported ages from the survey with the ages available in the university's administrative data. Of the 3,009 participants who reported an age, only 16 (< 0.6 percent) reported a value that differed from the university's data by more than one year.

15. A total of 4,834 participants completed the 2016 baseline survey, but 34 had subsequently withdrawn from the study at the time of this invitation.

D.2.5. Health Screening Data

D.2.5.a. Fall 2016 Health Screening

The number of participants who signed up for a health screening totaled 2,047, and 1,900 were successfully screened. The top of each participant's screening form (see Appendix Figure D.18) contains the participant's answers to the following questions:

1. "Do you use tobacco of any form?"
2. "In the average week, how many times do you engage in physical activity?"
3. "If you engage in physical activity, for how long?"
4. "How often do you feel tense, anxious, or depressed?"
5. "Do you have a primary physician?"
6. "Did you fast today?"

The following biometric data were recorded on every form: height, weight, waist circumference, body mass index, systolic blood pressure, diastolic blood pressure, total cholesterol, total cholesterol ratio, HDL, LDL, triglycerides, and glucose. Finally, the form also records which (if any) of the following actions were taken by the health coach (see also Appendix Figure D.19) as a result of the patient's biometric readings:

1. Referred patient to a primary care physician.
2. Advised patient to make minor lifestyle changes.
3. Communicated to patient that one or more results were out of the normal range.
4. Communicated to patient that the results require a medical referral.
5. Communicated to patient that the results require immediate medical attention.

In order to ensure accuracy, all of the data on every form was read and entered into a database twice, by two different research assistants. Any disagreements between the two entries were resolved by reexamining the original form.

D.2.5.b. Fall 2017 Health Screening

The control and treatment groups were both invited to the fall 2017 health screening. A total of 2,004 people from both groups were successfully screened. The data were digitized using the procedure outlined in the description of the fall 2016 health screening data.

D.2.5.c. Fall 2018 Health Screening

The control and treatment groups were both invited to the fall 2018 health screening. A total of 1,761 people from both groups were successfully screened. The data were digitized using the procedure outlined in the description of the fall 2016 health screening data.

The screening form was redesigned in 2018 (see Appendix Figure [D.37](#)). Because the 2018 screening form omitted the box for “waist circumference,” the clinicians recorded waist circumference measures using other available space on the form. (The screening form also omitted the box for A1C, but A1C was never measured in any of the 2016–2018 screenings.) In addition, the section for clinician comments at the bottom of the form was removed in 2018, and the formatting of the checkboxes for “Fasting” and “Non-Fasting” changed in 2018. These changes may have affected the recording of some of the waist circumference measures and the checkbox “Fasting” measures on the first day of the 2018 health screenings.

D.2.6. Health Questionnaire Data

D.2.6.a. Fall 2016 Health Questionnaire

Participants were required to fill out a health questionnaire on-site just prior to receiving their health screening, so every participant who was screened (1,900 in total) is also represented in this dataset. A copy of the questionnaire is displayed in Appendix Figure [D.17](#). As with the health screening data, these data were digitized twice in order to ensure accuracy.

D.2.6.b. Fall 2017 Health Questionnaire

Every participant who was screened in 2017 (2,004 in total) is also represented in this dataset. The data were digitized using the procedure outlined in the description of the fall 2016 health questionnaire data.

D.2.6.c. Fall 2018 Health Questionnaire

Every participant who was screened in 2018 (1,761 in total) is also represented in this dataset. The data were digitized using the procedure outlined in the description of the fall 2016 health questionnaire data.

D.2.7. Online Health Risk Assessment and Wellness Activities Data

D.2.7.a. Fall 2016/Spring 2017 Online Health Risk Assessment and Wellness Activities

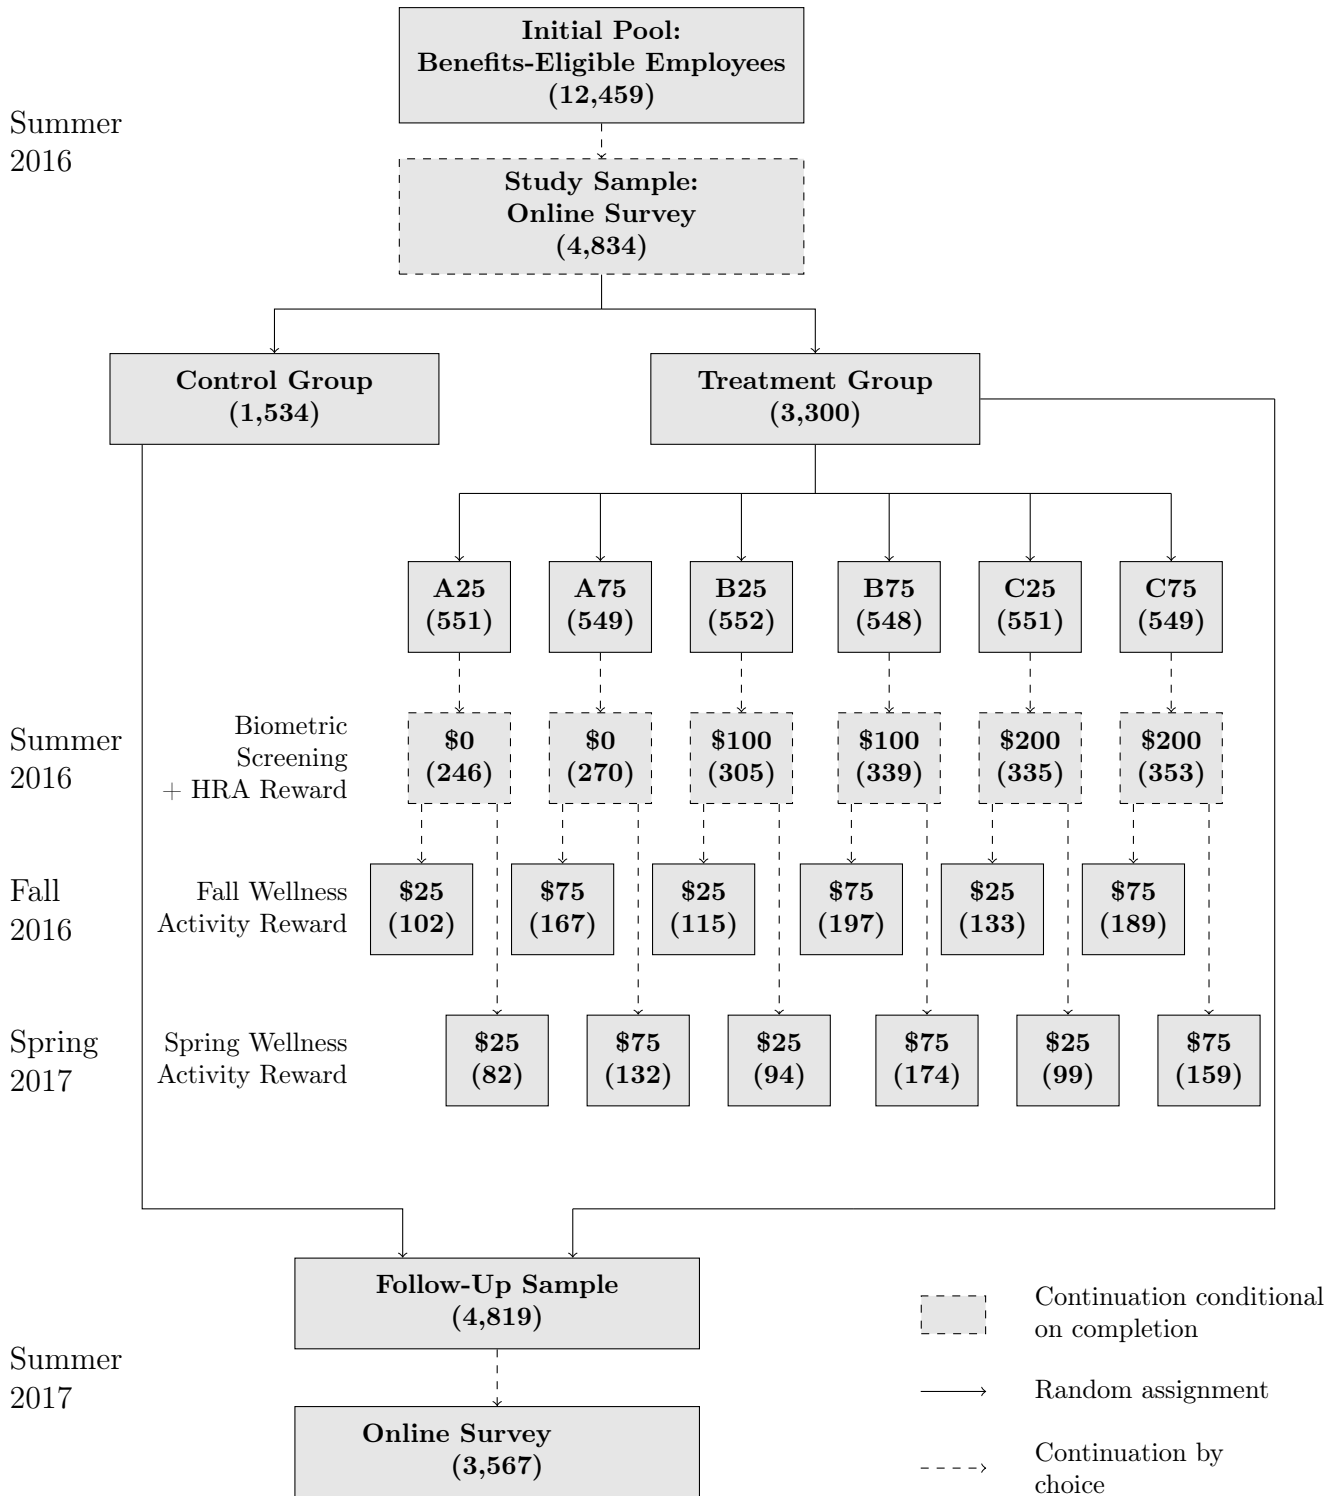

Out of the 1,900 participants who completed a health screening, 1,848 completed an online HRA. These 1,848 participants constitute the set of study participants who were eligible to sign up for wellness activities in the fall and in the spring. Participants were not required to sign up for a fall activity in order to sign up for a spring activity. Out of the 1,848 people eligible to participate, 1,304 people signed up for a fall wellness activity (903 completed it), and 1,059 people signed up for a spring wellness activity (740 completed it).

The online HRA data contain the exact start dates and times that participants began their HRA and the exact end dates and times they completed it. The wellness activity data include indicator variables for whether the participant signed up for a wellness activity and for whether the participant completed that activity. If the participant signed up for an activity, the name of the activity was also recorded. (See Appendix Tables [D.2](#) and [D.3](#) for names and descriptions of the activities that were offered.) The wellness activities data also include information on how much of the activity was completed by the participant, along with the minimum threshold required to qualify for the wellness activity reward.¹⁶

16. For example, the spring 2017 “Lunchtime Walk” activity met on eight separate occasions, and participants were required to participate in at least six of the walks in order to qualify for their reward. The wellness activities data contains a variable specifying how many walks each participant attended.

Illinois Workplace Wellness Study Invitation

From: **Illinois Workplace Wellness Study** [REDACTED]
Date: Monday, July 11, 2016 10:34 AM
Subject: Illinois Workplace Wellness Study Invitation
To:

Dear Colleagues,

We invite you to take part in a research study of workplace wellness programs. This study is funded by the National Institutes of Health and will help inform national health policy regarding the costs and benefits of wellness programs.

The first part of the study consists of an online survey about health behaviors and wellness on campus. The survey will take approximately 15 minutes to complete. We know that your time is valuable, so we are offering a **\$30 Amazon.com gift card** to all respondents who complete the survey.

The survey is only available for a limited time, so please complete the survey promptly in order to receive your \$30 gift card. To access the online survey, simply click the following URL or paste it in your browser:

<http://surveys.citl.illinois.edu/go/Wellnessjx421>

This survey is strictly confidential. **Your individual data will never be shared with the university or your health insurer.** Some of you who take the survey will be offered an opportunity to participate in a second part of the research study.

For non-exempt civil service employees, this program is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

Thank you for contributing to this important research project! If you have any questions or need assistance, please contact us at [REDACTED]

Best regards,

Illinois Workplace Wellness Study Team

David Molitor
Assistant Professor, Department of Finance

Laura Payne
Associate Professor, Department of Recreation, Sport and Tourism

Julian Reif
Assistant Professor, Department of Finance and IGPA

FIGURE D.9: Text of invitation email sent to participants in treatment group C75 (\$350 incentive) on August 9, 2016

From: [REDACTED]
Subject: Illinois Workplace Wellness Study: iThrive Invitation

Dear [First Name]:

Last month, you completed a health survey as part of the Illinois Workplace Wellness Study. You have been selected to participate in the second part of this research study: [iThrive](#), a program to promote health and wellness among campus faculty and staff.

iThrive offers you the opportunity to participate in valuable health screening and wellness activities at no cost to you. In addition, you can earn up to \$350 in financial rewards, as described below.

The opportunity to participate in iThrive is only available for a limited time. To learn more about how to get started and earn rewards, visit the iThrive website: [iThrive.illinois.edu](#)

The iThrive website provides personalized information on your progress, links for signing up for iThrive opportunities, answers to frequently asked questions (FAQs), and a summary of your rewards. To help you get started, you will receive an invitation later today from Presence Health, in order to schedule your health screening.

The iThrive program is summarized below.

How iThrive Works

iThrive begins with a health screening and health assessment survey. Once you complete the screening and health assessment, you are eligible to enroll in wellness activities in Fall 2016 and again in Spring 2017.

Step 1: Health Screening + Health Assessment Survey (\$200 reward)

The health screening is your gateway to iThrive. The purpose of a health screening is to measure physical health characteristics (e.g., height, weight, blood pressure, cholesterol) and use the information as a benchmark for health promotion and management. For your convenience, Presence Health will offer these screenings at various dates and locations across campus.

After completing the health screening, you will receive an invitation to complete an online health assessment survey. The health assessment will provide you with a detailed health summary and evaluation of health risks. Upon completion of the health screening and health assessment survey, you will receive a reward of \$200.

Step 2: Wellness Activities (up to \$150 reward)

After completing your health screening and health assessment survey, you will have the opportunity to participate in a wellness activity that aligns with an area of your health that you would like to improve. These areas include physical activity, weight management, stress management, chronic disease self-management, and tobacco cessation. You will have the option to participate in programs that meet in person, or you may choose to participate in one of our online, self-paced programs.

These activities will be offered in Fall 2016 and again in Spring 2017. Completing your chosen wellness activity in Fall 2016 will entitle you to a \$75 reward. Completing an activity in Spring 2017 will entitle you to another \$75 reward, for a total possible reward of \$150 for wellness activities. If you do not complete an activity in Fall 2016, you are still eligible to participate in Spring 2017 and receive a \$75 reward.

Enrolling in iThrive

You enroll in iThrive by scheduling your health screening. When scheduling your health screening, please use the email address to which this email was sent (netid@illinois.edu). This email address will be referred to as your "iThrive contact email". You will receive an email from Presence Health today with a link to the online scheduler. You can also access the online scheduler now by copying and pasting the following URL into your browser:

ithrive.acuityscheduling.com

You may also visit the iThrive website at any time: ithrive.illinois.edu. This website will provide personalized information on your progress, links for signing up for iThrive opportunities, and a summary of your rewards.

For non-exempt civil service employees, iThrive is an "approved event," so that, operations permitting and with prior supervisory approval, participation that occurs during an employee's regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer**. You can read [here](#) about the purpose of our study as well as the steps we will take to keep your information confidential. If you have any questions or need assistance, please contact us at [REDACTED]

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.10: Front and back sides of the postcard mailed to participants selected to participate in iThrive, week of September 8, 2016

FIGURE D.11: Login page for the iThrive website

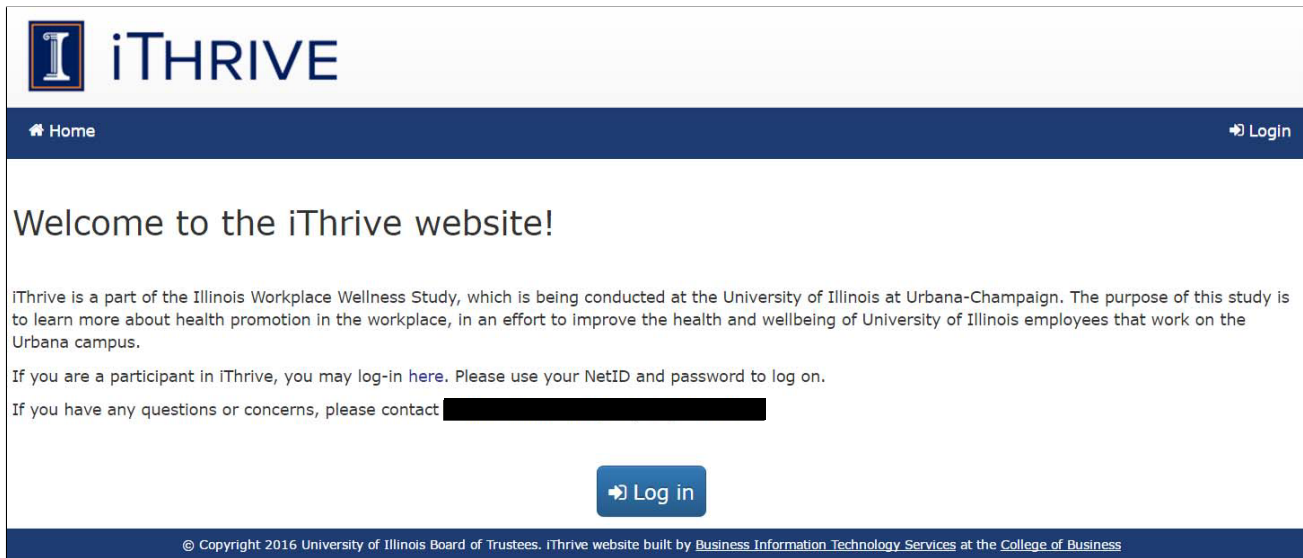

FIGURE D.12: Main home page for the iThrive website

The screenshot shows the iThrive website interface. At the top left is the iTHRIVE logo. A dark blue navigation bar contains links for 'My Portal', 'Health Screening & Assessment', 'Wellness Activities', 'FAQ', and 'Contact'. On the right of the bar, it says 'Welcome John Doe' and a 'Logout' button. The main content area is titled 'My Portal' and contains a paragraph explaining the program. Below this is a bold announcement about completing health screening and wellness activities by September 16th and 30th. A large orange text line states: 'Your participation reward: \$200.00 of \$350.00 earned so far'. Two side-by-side boxes provide step-by-step information. The left box, 'Step 1: Health Screening & Assessment', describes the first step, provides a link to learn more, congratulates the user for completion, and lists a reward of \$200.00 for completing both steps. It shows two green checkmarks for 'Health Screening completed' and 'Health Assessment completed'. The right box, 'Step 2: Wellness Activities', describes the second step, provides a link to learn more, notes that registration for Fall activities is closed, and lists a reward of \$75.00 for completing a Fall activity and \$75.00 for completing a Spring activity. It shows two red X marks for 'Fall activity not completed' and 'Spring activity not completed'. A footer at the bottom of the page contains copyright information for 2016 and credits the website to Business Information Technology Services at the College of Business.

My Portal Health Screening & Assessment Wellness Activities FAQ Contact Welcome John Doe Logout

My Portal

My Portal gives you information about your progress in iThrive, a program to promote health and wellness among campus faculty and staff. iThrive offers you the opportunity to participate in valuable health screening and wellness activities at no cost to you. In addition, you can receive financial rewards for completing certain elements of iThrive.

To earn rewards and to participate in Wellness Activities, you must complete your Health Screening by Friday, September 16th and the Health Assessment by Friday, September 30.

Your participation reward: \$200.00 of \$350.00 earned so far

Step 1: Health Screening & Assessment

The first step in iThrive is to complete your Health Screening and Health Assessment. After you complete your Health Screening, you will be able to access your online Health Assessment. [Learn more about Health Screening & Assessment »](#)

Congratulations! You have completed your Health Screening and Health Assessment.

Reward for completing both the Health Screening and Health Assessment: \$200.00

- ✓ Health Screening completed
- ✓ Health Assessment completed

Step 2: Wellness Activities

After you have completed Step 1, you may register to participate in a wellness activity. You may use the information provided to you in your Health Assessment to select a program that best addresses an area of your health that you would like to improve. [Learn more about Wellness Activities »](#)

Registration for Fall Activities is now closed. More information about Spring Activity registration will be made available soon.

Reward for completing Fall activity: \$75.00

Reward for completing Spring activity: \$75.00

- ✗ Fall activity not completed. Registered for HealthTrails
- ✗ Spring activity not completed

Notes: These reminders were delivered one day before the participant's health screening appointment.

FIGURE D.16: Example of a reminder email sent by the research team to participants one day prior to their health screening

Hello,

You are receiving this email because you are scheduled for an iThrive health screening appointment **tomorrow, September 2nd, at the Funk ACES Library**. The address is as follows:

**Funk ACES Library
1101 S Goodwin Ave
Urbana, IL 61801**

Tomorrow's health screenings will be held in the **Heritage Room**. Enter the ACES Library from the main entrance. The Heritage Room is located on the main level of ACES, on the West Side of the atrium. Once you enter the building doors, you will continue into the Atrium where the stairs are, and you will see the Heritage Room.

Note: Please do not have anything to eat or drink (besides water) for 12 hours before your appointment time. Water is encouraged.

Please allow about 20-25 minutes for your screening appointment.

If you have any questions tonight or tomorrow morning, please email [REDACTED] and we will do our best to respond to your email as soon as possible.

Sincerely,

Lauren Geary

FIGURE D.20: Postcard given to participants on site after they completing their health screening

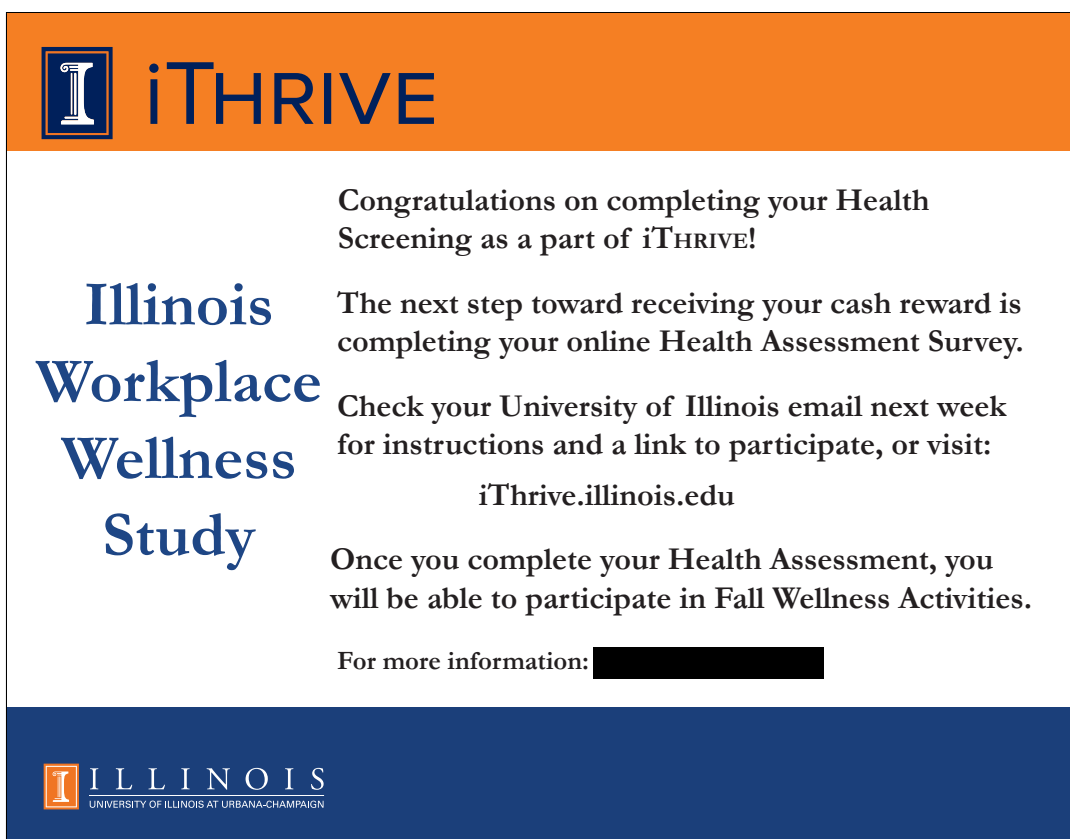

FIGURE D.21: Email invitation for the 2016 online health risk assessment

From: [REDACTED]
Subject: iThrive: Health Assessment Survey Invitation

Dear [First Name]:

Congratulations on completing your iThrive health screening! The next step is to complete your online Health Assessment survey, which will provide you with a personalized health summary and suggest practical ways to improve your health.

The Health Assessment survey takes about 12 minutes. After finishing this survey, you will receive a reward of \$100 and will be eligible to enroll in wellness activities once registration opens.

To access the online Health Assessment survey, simply copy and paste the following URL into your browser:
ithrive.illinois.edu/healthassessment

You must log in using the following username and initial password:

Username: <username>
Password: <password>

Once you are logged in, you must accept the terms of agreement. Next, click on the “Start New Assessment” button and answer a series of questions. You must click “Finish” when you are done, in order to view your report and to become eligible to enroll in wellness activities.

Please note: Some participants have experienced technical difficulties when taking their surveys. Slow response times or error messages sometimes arise when our survey vendor’s servers become overloaded. If you face any technical difficulties while taking the survey, please wait for fifteen minutes and try again later. We are sorry for any inconvenience this might cause for you.

This survey asks questions about seven dimensions of health (i.e., heart health, fitness, nutrition, mental health, diabetes risk, cancer risk, overweight/obesity risk). In order for the software to calculate a personalized wellness score for each dimension, you must answer all of the questions. Your results will give you insights you can use to make goals and plans for health improvement through iThrive programs and activities.

In the consent form you signed at the beginning of this study, you were told that you may refuse to answer any questions and withdraw at any time. This is still true with the Health Assessment, except that if you choose to skip any question in the health assessment, you cannot proceed with the survey. This software limitation only applies to the Health Assessment. If you do not wish to answer all of the survey items, you may withdraw from the study altogether.

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer**. If you have any questions or need assistance, please contact us at [REDACTED] or call Lauren Geary, Project Manager, at [REDACTED].

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: This was sent only to participants who had completed their health screening. The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.22: Email invitation for Fall 2016 wellness activities

From: [REDACTED]
Subject: iThrive: Wellness Activity Registration Now Open

Dear [First Name]:

Congratulations on completing your iThrive Health Screening and online Health Assessment survey! You are now eligible to enroll in one of the iThrive Wellness Activities for Fall 2016.

You are free to choose a wellness activity, also called a “track,” that best aligns with an area of your health that you would like to improve. These areas include physical activity, weight management, stress management, chronic disease management, and tobacco cessation. You will have the option to participate in classes that meet in-person, or you may choose to participate in one of our online, self-paced programs like HealthTrails.

Completing your chosen wellness track in the Fall will entitle you to a \$[X] reward. If you also complete a wellness track in the Spring, you will receive an additional \$[X]. You do not have to participate in an activity in the Fall in order to be eligible to participate in the Spring.

To view the set of Wellness Activities that will be offered and to enroll, log in to iThrive by copying and pasting the following URL into your browser:

<https://ithrive.illinois.edu/>

After you log in to iThrive, click on the “Wellness Activities” tab near the top of your home page. This page lists the different activities available to you. Below each activity is a registration link. Click on the link that corresponds to the activity in which you would like to enroll, select the option to “log in using your netid,” and complete the registration form. You will receive a confirmation email when you have completed this step. Please note that you may only sign up for one fall activity.

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

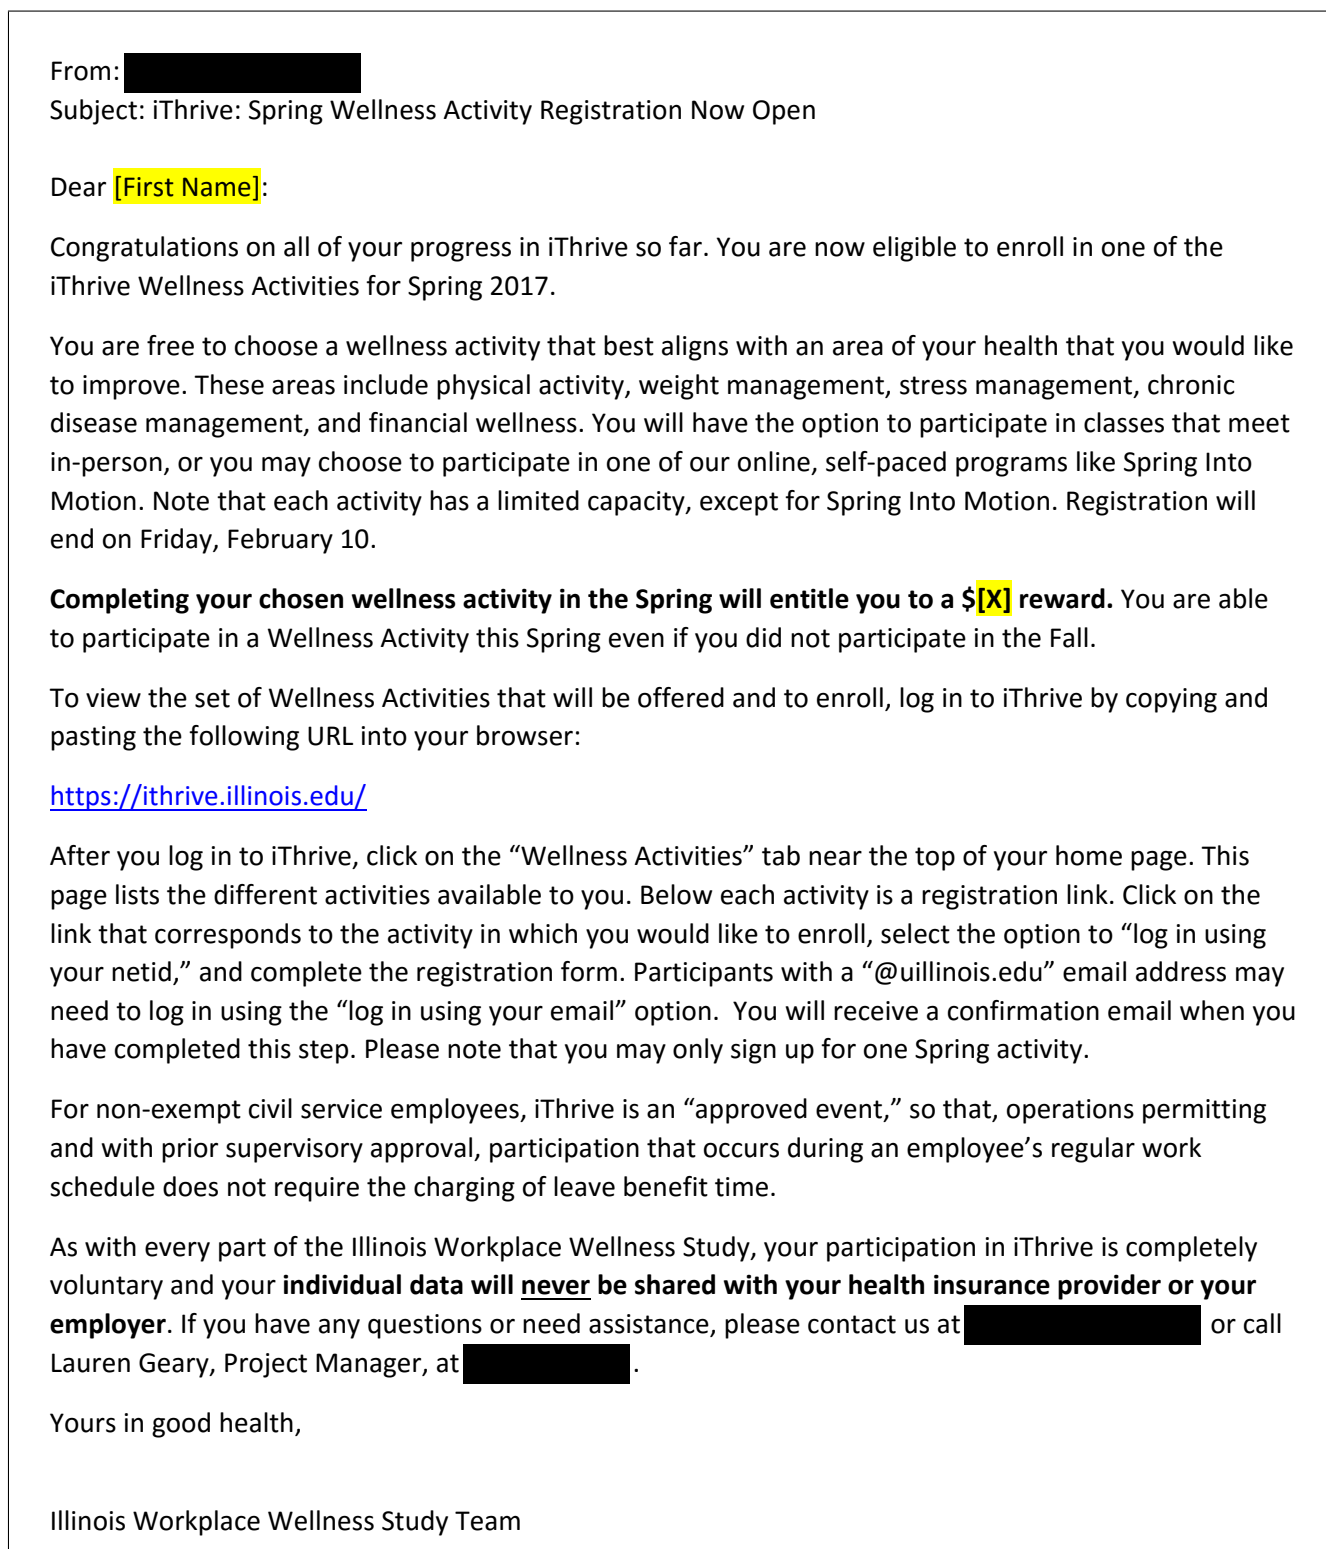

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer.** If you have any questions or need assistance, please contact us at [REDACTED] or call Lauren Geary, Project Manager, at [REDACTED].

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: This was sent only to participants who had completed their online HRA. The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.24: Front and back sides of invitation postcard sent on July 6, 2017

FIGURE D.25: One-year follow-up survey invitation sent to study participants on July 10, 2017

Dear <FirstName>,

Last summer, you participated in an online survey for the Illinois Workplace Wellness Study. Your participation has allowed the Illinois Workplace Wellness Study Team to conduct important research about workplace wellness programs on the UIUC campus.

We invite you to take part in a second survey for the Illinois Workplace Wellness Study. As before, this online survey includes questions about health behaviors and wellness on campus. The survey will take approximately 15 minutes to complete. We know that your time is valuable, so we are offering a **\$20 Amazon.com gift card** to all respondents who complete the survey. This gift card is taxable.

The survey is only available for a limited time, so please complete the survey promptly in order to receive your \$20 gift card. To access the online survey, simply copy and paste the following URL in your browser:

<link>

This survey is strictly confidential. **Your individual data will never be shared with the university or your health insurer.**

For non-exempt civil service employees, this program is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

Thank you for contributing to this important research project! If you have any questions or need assistance, please contact us at [REDACTED] or [REDACTED].

Best regards,

Illinois Workplace Wellness Study Team

David Molitor
Assistant Professor, Department of Finance

Laura Payne
Professor, Department of Recreation, Sport and Tourism

Julian Reif
Assistant Professor, Department of Finance and IGPA

FIGURE D.26: One-year follow-up survey reminder sent on August 2, 2017

From: [REDACTED]
Subject: \$100 gift card drawing: Illinois Workplace Wellness Study

Dear [FIRSTNAME],

We are pleased to announce that those who complete the online survey for the Illinois Workplace Wellness Study will be entered into a drawing to win a \$100 Amazon.com gift card.

Ten (10) people who complete the brief survey will be selected at random to receive a \$100 Amazon.com gift card. This gift card will be in addition to the \$20 Amazon.com gift card that all participants receive for completing the online survey. The drawing for the \$100 Amazon.com gift card will occur after the survey closes. Winners will be notified by email.

To access the online survey, simply copy and paste the following URL in your browser:

<personalized study url>

If you have already completed the survey, then you will automatically be entered into the drawing.

If you have any questions or need assistance, please contact us at [REDACTED]
or [REDACTED]

Best Regards,

Illinois Workplace Wellness Study Team

Notes: The text highlighted in yellow was appropriately customized for each participant. This reminder informed participants for the first time that completing the follow-up survey would enter them into a drawing for an additional \$100 reward.

FIGURE D.27: Text of screening invitation email sent to study participants on August 14, 2017

<p>Dear [First Name]:</p> <p>You have been selected to participate in the 2017 iThrive Health Screenings. The iThrive Health Screenings are a component of the Illinois Workplace Wellness Study.</p> <p>The iThrive program offers you the opportunity to participate in a valuable health screening at no cost to you. In addition, you will earn \$125 for completing the iThrive Health Screening.</p> <p>The opportunity to participate in the iThrive Health Screening is only available for a limited time. To learn more about iThrive and to sign up for an appointment, visit the iThrive website:</p> <p>ithrive.illinois.edu</p> <p>The iThrive Health Screening is summarized below.</p> <p>Last month, you were invited to take the Illinois Workplace Wellness Study online survey. Even if you did not complete that survey, you are still invited to participate in the health screening. For those of you who took the survey, the random drawing has been completed and the winners have been notified.</p> <hr/> <h3>iThrive Health Screening</h3> <p>You are invited to participate in a free health screening through the iThrive program, beginning on August 21. The purpose of a health screening is to measure physical health characteristics (e.g., height, weight, blood pressure, cholesterol) and use the information as a benchmark for health promotion and management. For your convenience, Presence Health will offer these screenings at various dates and locations across campus. Appointments typically take about 20 to 25 minutes.</p> <p>Upon completion of the health screening, you will receive a reward of \$125.</p> <h3>Scheduling your Health Screening</h3> <p>To schedule your health screening, copy and paste the URL below into your web browser:</p>	<p>https://presencehealth.acuityscheduling.com/</p> <p>When scheduling your health screening, please use the email address to which this email was sent (netid@illinois.edu). FIGURE D.28: Text of reminder email sent to study participants on September 21, 2017

Dear [First Name]:

This is your **last chance** to attend your free iThrive Health Screening. **The final day to complete your iThrive Health Screening is tomorrow, Friday September 22nd, at Beckman Institute.** To schedule a screening, copy and paste the following URL into your browser:

<https://presencehealth.acuityscheduling.com/schedule.php>

As a reminder, you will receive a reward of \$125 after completing your iThrive Health Screening.

Walk-ins are also encouraged! Stop by Beckman Institute, Room 1005 any time between 6am and 12pm on Friday, September 22nd for an appointment.

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer.** If you have any questions or need assistance, please contact us at

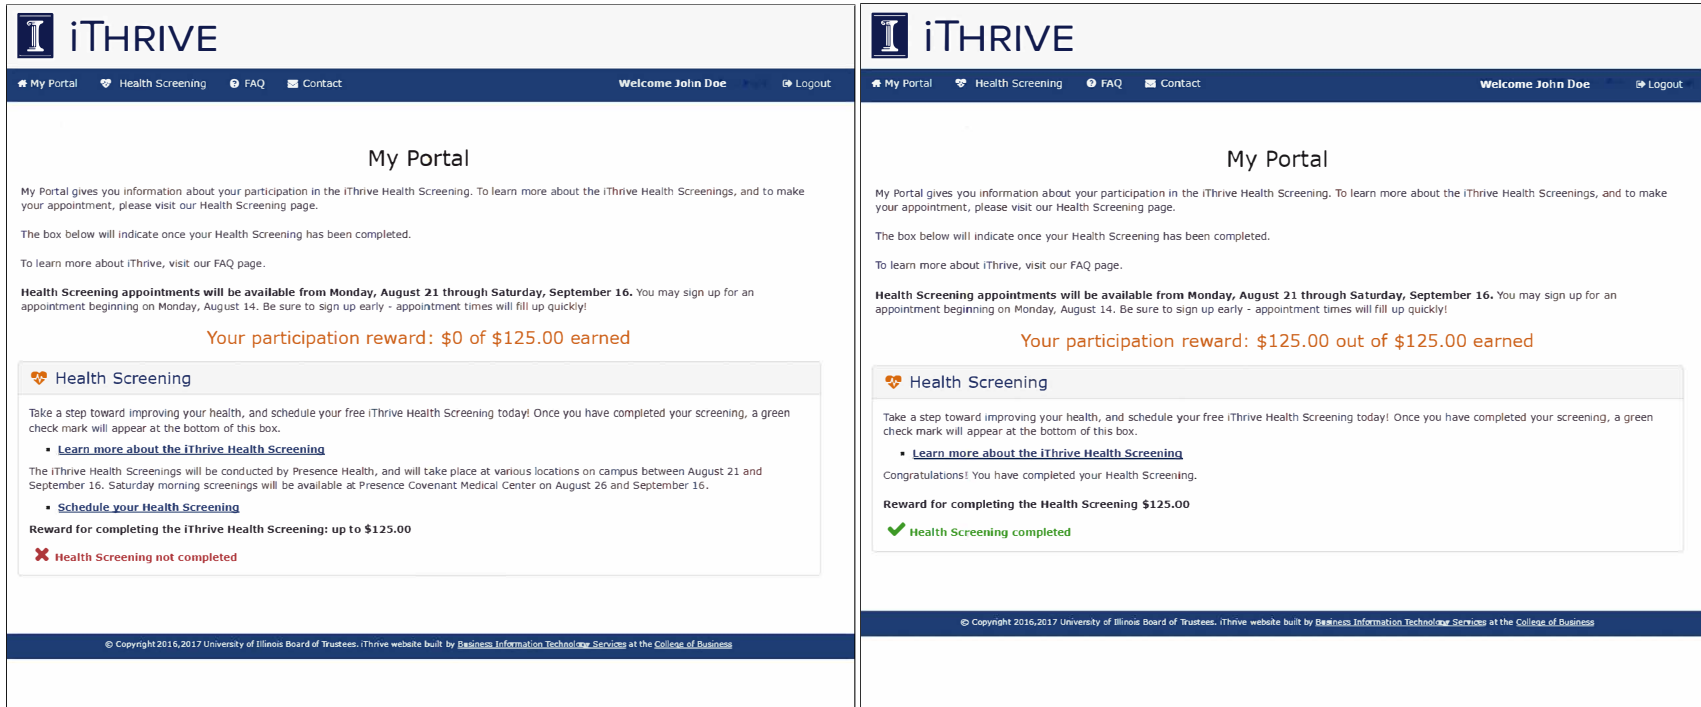

Yours in good health,

Illinois Workplace Wellness Study Team

FIGURE D.31: Text of the confirmation email sent to one-year follow-up screening participants in the \$125 reward group

From: [REDACTED]
Subject: Your iThrive Health Screening Payment

Hello,

Congratulations on completing your iThrive Health Screening! Your \$125 reward for completion will be processed in October, after the iThrive Health Screenings have ended. The payments will be made through direct deposit, and will be included as part of your regularly scheduled paychecks. As a reminder, these payments are taxable.

You may log in to the iThrive website at <https://iThrive.illinois.edu> to view your progress at any time.

Please let us know if you have any questions. We will send an email in October after all of the payments have been made.

Yours in good health,

The Illinois Workplace Wellness Study Team

Notes: Follow-up screening participants in the \$0 reward group did not receive a confirmation email. However, all follow-up screening participants could confirm their completion status on the iThrive website.

FIGURE D.32: Email invitation for the 2017 online health risk assessment

Dear [First Name]:

Congratulations on completing your iThrive health screening! The next step is to complete your online Health Assessment survey, which will provide you with a personalized health summary and suggest practical ways to improve your health.

The Health Assessment survey takes about 12 minutes. After finishing this survey, you will be eligible to sign up for Fall 2017 and Spring 2018 iThrive Wellness Activities. **Twenty (20) people who complete a fall activity, and another twenty (20) people who complete a spring activity, will be selected at random to receive a \$50 Amazon.com gift card.**

To access the online Health Assessment survey, simply copy and paste the following URL into your browser:

ithrive.illinois.edu/healthassessment

You must log in using the following username and initial password:

Username: <username>
Password: <password>

Once you are logged in, you must accept the terms of agreement. Next, click on the “Start New Assessment” button and answer a series of questions. **Note: Be sure to keep a copy of your iThrive Health Screening results, as you may enter that information into your Health Assessment survey for a more detailed report.** You must click “Finish” when you are done, in order to view your report and to become eligible to enroll in wellness activities.

This survey asks questions about seven dimensions of health (i.e., heart health, fitness, nutrition, mental health, diabetes risk, cancer risk, overweight/obesity risk). In order for the software to calculate a personalized wellness score for each dimension, you must answer all of the questions. Your results will give you insights you can use to make goals and plans for health improvement through iThrive programs and activities.

In the consent form you signed at the beginning of this study, you were told that you may refuse to answer any questions and withdraw at any time. This is still true with the Health Assessment, except that if you choose to skip any question in the health assessment, you cannot proceed with the survey. This software limitation only applies to the Health Assessment. If you do not wish to answer all of the survey items, you may withdraw from the study altogether.

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer.** If you have any questions or need assistance, please contact us at [REDACTED] or call [REDACTED]

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: This was sent only to members of the treatment group who had completed their 2017 health screening. The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.33: Email invitation for Fall 2017 wellness activities

Dear «First_Name»:

Congratulations on completing your iThrive Health Screening and online Health Assessment survey! You are now eligible to enroll in one of the iThrive Wellness Activities for Fall 2017.

For those of you who tried to register at noon, but were unable to do so, we apologize for the inconvenience. The servers where the registration sheets are stored had crashed, but are up and running now.

You are free to choose a wellness activity that best aligns with an area of your health that you would like to improve. These areas include physical activity, weight management, stress management, chronic disease management, and tobacco cessation. You will have the option to participate in classes that meet in-person, or you may choose to participate in one of our online, self-paced programs.

Twenty (20) people who complete a fall activity, and another twenty (20) people who complete a spring activity, will be selected at random to receive a \$50 Amazon.com gift card.

To view the set of Wellness Activities that will be offered and to enroll, log in to iThrive by copying and pasting the following URL into your browser:

<https://ithrive.illinois.edu/>

After you log in to iThrive, click on the “Wellness Activities” tab near the top of your home page. This page lists the different activities available to you. Below each activity is a registration link. Click on the link that corresponds to the activity in which you would like to enroll, select the option to “log in using your netid,” and complete the registration form. If you have a “@uillinois.edu” email address, you may need to select the option to “log in using email”. You will receive a confirmation email when you have completed this step. **Please note that you may only sign up for one fall activity.**

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer**. If you have any questions or need assistance, please contact us at [REDACTED] or call [REDACTED]

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: This was sent only to participants who had completed their online HRA. The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.34: Email invitation for Spring 2018 wellness activities

Dear [First Name],

Congratulations on all of your progress in iThrive so far. You are now eligible to enroll in one of the iThrive Wellness Activities for Spring 2018.

You are free to choose a wellness activity that best aligns with an area of your health that you would like to improve. These areas include physical activity, weight management, stress management, and others. You will have the option to participate in classes that meet in-person, or you may choose to participate in our online, self-paced health challenge – “Keep America Active”.

Twenty (20) people who complete a spring activity will be selected at random to receive a \$50 Amazon.com Gift Card.

To view the Wellness Activity options that will be offered during the Spring 2018 semester, log in to iThrive by copying and pasting the following URL into your browser:

<https://iThrive.illinois.edu>

After you log in to iThrive, click the “Wellness Activities” tab near the top of your home page. This page lists the different activities available to you. Below each activity is a registration link. Click on the link that corresponds to the activity in which you would like to enroll, select the option to “log in using your NetID,” and complete the registration form. If you have a “@uillinois.edu” email address, you may need to select the option to “log in using email”. You will receive a confirmation email when you have completed this step. **Please note that you may only sign up for one Spring 2018 activity.**

For non-exempt civil service employees, iThrive is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

As with every part of the Illinois Workplace Wellness Study, your participation in iThrive is completely voluntary and your **individual data will never be shared with your health insurance provider or your employer**. If you have any questions or need assistance, please contact us at [REDACTED] or call [REDACTED]

Yours in good health,

Illinois Workplace Wellness Study Team

Notes: This was sent only to participants who had completed their online HRA. The text highlighted in yellow was appropriately customized for each participant.

FIGURE D.35: Two-year follow-up survey invitation sent to study participants on July 9, 2018

Dear <FirstName>,

Two years ago, you completed an online survey for the Illinois Workplace Wellness Study. Your participation has allowed the Illinois Workplace Wellness Study Team to conduct important research about workplace wellness programs on the UIUC campus.

We invite you to take part in another survey for the Illinois Workplace Wellness Study. As before, this online survey includes questions about health behaviors and wellness on campus. The survey will take approximately 10-15 minutes to complete. We know that your time is valuable, so we are offering a **\$20 Amazon.com gift card** to all respondents who complete the survey. This gift card is taxable.

The survey is only available for a limited time, so please complete the survey promptly in order to receive your \$20 gift card. To access the online survey, simply copy and paste the following URL in your browser:

<link>

This survey is strictly confidential. **Your individual data will never be shared with the university or your health insurer.**

For non-exempt civil service employees, this program is an “approved event,” so that, operations permitting and with prior supervisory approval, participation that occurs during an employee’s regular work schedule does not require the charging of leave benefit time.

Thank you for contributing to this important research project! If you have any questions or need assistance, please contact us at [REDACTED]

Best regards,

Illinois Workplace Wellness Study Team

David Molitor
Assistant Professor, Department of Finance

Laura Payne
Professor, Department of Recreation, Sport and Tourism

Julian Reif

Freedom from Smoking	1	N/A	10/17/16	12/16/16	8 weekly calls	20	17	9	The Illinois Freedom from Smoking Helpline is a one-on-one telephonic coaching program to help participants to quit tobacco for good. Participants are matched with a trained cessation expert. Quitline cessation specialists offer participants expert advice, an assessment of your tobacco treatment, and help you develop a customized quit-plan. Calls take place weekly, and are scheduled at your convenience.
HealthTrails	Unlimited	N/A	10/10/16	12/4/16	400 virtual miles	Unlimited	1027	715	HealthTrails is an eight-week self-paced, online wellness activity developed by Health Enhancement Systems – a leader in online wellness campaigns. This program allows participants to virtually travel along famous trails as they practice and record healthy lifestyle behaviors such as physical activity, nutrition, and stress management. HealthTrails includes the option of a mobile application that allows participants to conveniently track their behaviors using their cell phone or other mobile device. The program incorporates challenging wellness goals and fun themes, as well as daily tips throughout the program. Participants who choose to register for HealthTrails can work to improve their health in the areas of: * Physical Activity * Stress Management * Healthy Eating
Live Well Be Well	1	5:15pm - 7:15pm (R)	10/13/16	11/17/16	Attend 5 of 6 classes	20	19	16	Live Well, Be Well is a six-week evidence-based chronic disease self-management program that was developed by Stanford University. This interactive program has been shown empowers participants through learning important lifestyle skills that enhance one's ability to effectively manage ongoing health conditions. This program is open to anyone with an ongoing health condition such as arthritis, heart disease, asthma, lung disease, diabetes, osteoporosis, cancer or any other. Caregivers may also participate. The program is taught by certified facilitators Cheri Burcham and Chelsey Byers, University of Illinois Extension community health educators.
Prudential Pathways	1	5:15pm - 6:15pm (R)	10/13/16	11/10/16	Attend 5 of 5 classes	25	25	20	The Prudential Pathways program offers practical, down-to-earth financial information. Participants will gain an understanding of the fundamentals of financial wellness, and personal financial planning. Prudential Pathways will be facilitated by Peggy Furlong with Prudential Financial, and will cover important topics such as: setting your financial goals, protecting your assets through risk management, investment principles, healthcare planning, retirement and asset distribution planning, tax strategies, estate planning strategies, how your employee benefits fit into your overall financial wellness, and more.
Recess for Adults	2	5:15pm - 6:00pm (W), 6:30pm - 7:15pm (W)	10/12/16	12/7/16	Attend 6 of 8 classes	50	49	28	Recess For Adults is an eight-week program inspired by games typically seen on a playground. This program is perfect for adults to increase their physical activity levels, and to have fun together. A typical class agenda could include, for example, "Red Light, Green Light", "Crazy Kickball", "Blob Tag", and "Group Juggle". This program meets once per week for 45 minutes, for eight weeks. The program will be led by instructor Kerri Schiller, a University of Illinois PhD student in Recreation, Sport, and Tourism.
Stress Management	1	5:15pm - 6:15pm (W)	10/19/16	12/14/16	Attend 6 of 8 classes	40	40	27	This eight-week program provides participants with the knowledge and skills to effectively manage stress in their lives. Participants gain an understanding of how stress affects them. They build awareness of their personal stressors and stress symptoms, of their ability to control how stress affects them, and how to address stress. The program is very interactive; in each session participants learn practical skills they can use in their daily lives. Topics include defining stress, overcoming stressful thought patterns, relaxation techniques, managing stress at work, coping with change, and more. The program is facilitated by Michele Guerra, the Director of the UI Wellness Center.
Tai Chi	3	5:15pm - 6:15pm (T), 6:30pm - 7:30pm (T, R)	10/11/16	12/8/16	Attend 6 of 8 classes	60	60	39	Tai Chi for Relaxation is an eight-week program that aims to improve overall health and wellness through learning basic Tai Chi movements and techniques. The class is taught by local certified Tai Chi instructor Rick Krandel, who maintains certification from the Tai Chi for Health Institute. Three sessions of Tai Chi for Relaxation are scheduled this fall. You may select either the Tuesday evening or Thursday evening sessions.
Weight Watchers at Work	2	12:00pm-12:50pm (W,R)	10/12/16	12/8/16	Attend 6 of 8 classes	32	32	27	Weight Watchers at Work is an eight-week weight management program, that aims to help participants to develop skills to unlock their inner strength to make healthy choices for life. Participants will learn how to see food as a fuel for a healthy life, and to find ways to move more each day. The SmartPoints plan assigns a point value to every food, and members are given a target number of points for each day. Participants can make their own choices about what foods to eat to reach their daily target number of points. Weight Watchers at Work will meet on Wednesdays and Thursdays from 12pm to 1pm.
Well at Work	1	12:00pm-12:50pm (M)	10/10/16	12/5/16	Attend 6 of 8 classes	35	35	22	The Well at Work Series is an eight-week program that provides participants with practical tips on how to stay healthy at work. Each session will focus on a different aspect of workplace wellness. The brief lunch and learn format is conveniently scheduled to increase employees' ability to attend. Facilitator Michele Guerra, the Director of the UI Wellness Center, will cover a variety of workplace health-related topics, including how to: fit physical activity in at work, eat healthfully at work, achieve work-life balance, get a good night's sleep, stay energized during the work day, relax during stressful moments, and more.

This interactive program has been shown empowers participants through learning important lifestyle skills that enhance one's ability to effectively manage ongoing health conditions. This program is open to anyone with an ongoing health condition such as arthritis, heart disease, asthma, lung disease, diabetes, osteoporosis, cancer or any other. Caregivers may also participate. The program is taught by certified facilitators Cheri Burcham and Chelsey Byers, University of Illinois Extension community health educators.
Lunchtime Walk	1	12:10pm - 12:55pm (M)	2/27/2017	4/24/2017	Attend 6 out of 8 sessions	35	34	21	Do you want to get more physical activity, but can't seem to find the time? It just got easier to fit in a walk during your busy day. Sign up for our Lunchtime Walk program. These walks are designed to fit into the average lunch break, allowing enough time to travel to and from the starting point, get a 30-minute walk, and return to your work area. The first three walks will be inside; once the weather warms up a bit, we will walk outside. Walkers of all abilities are welcome.
Mini Stress Relievers	1	12:10pm - 12:55pm (T)	2/14/2017	4/11/2017	Attend 6 out of 8 classes	35	35	28	Need some "me time"? Join our Mini Stress Relievers program! Each week we will feature an easy-to-do stress reduction activity. Examples of activities include: *Coloring *Practicing muscle relaxation techniques *Taking a contemplative walk *Experiencing the power of aromatherapy *And more! You will also have the opportunity to meet other campus employees in a relaxing atmosphere.
Recess for Adults	1	5:15pm - 6:00pm (W)	2/8/2017	4/5/2017	Attend 6 of 8 classes	25	25	15	Recess For Adults is an eight-week program inspired by games typically seen on a playground. This program is perfect for adults to increase their physical activity levels, and to have fun together. A typical class agenda could include, for example, "Red Light, Green Light", "Crazy Kickball", "Blob Tag", and "Group Juggle". This program meets once per week for 45 minutes, for eight weeks. The program will be led by instructor Kerri Schiller, a University of Illinois PhD student in Recreation, Sport, and Tourism.
Spring Into Motion	N/A	N/A	2/6/2017	4/2/2017	Obtain 40 "Springer Icons" (6,000 steps per day or 30 minutes of physical activity per day for 40 days)	Unlimited	808	588	Spring Into Motion is an online, self-paced wellness activity that encourages participants to be more active. The program allows participants to track either their steps or physical activity minutes each day, making progress toward a final goal. As they track their activity, participants progress through different, exciting spring events all around the world. This program is great for participants of all fitness levels. Whether you are just starting out, or have a well-established physical activity routine, Spring Into Motion will help to boost energy and improve health. For user convenience, a mobile application is also available to help with on-the-go activity tracking. Participants who own a FitBit or a Jawbone device will have the ability to sync their devices with their Spring Into Motion accounts, allowing for automatic activity tracking. Participants will strive to reach a goal of at least 6,000 steps per day or 30 minutes of physical activity per day, for at least 40 days throughout the program.
Tai Chi	3	6:30pm - 7:30pm (T), 6:30pm - 7:30pm (T, R)	2/7/2017	4/6/2017	Attend 6 of 8 classes	60	60	27	Tai Chi for is an eight-week program that aims to improve overall health and wellness through learning basic Tai Chi movements and techniques. The class is taught by local certified Tai Chi instructor Rick Krandel, who maintains certification from the Tai Chi for Health Institute. Two sessions of Tai Chi for Relaxation are scheduled this fall. You may select either the Tuesday evening or Thursday evening sessions.

TABLE D.5: Description of and statistics for the Fall 2017 wellness activities

	Number of classes	Time and day of week	Start date	End date	Reward requirement	Capacity	Registered	Completed	Description
Freedom from Smoking	1	5:15pm - 6:15pm (T)	10/17/2017	12/5/2017	Attend 6 out of 8 classes	20	2	2	<p>Have you wanted to quit tobacco but need help and support? Have you tried to quit before unsuccessfully? Increase your chances of quitting for good with the Freedom from Smoking program. Freedom from Smoking is a unique program based on proven addiction and behavior change models. The program offers a structured, systematic approach to quitting. It has a positive focus, with an emphasis on the benefits of better health. Because no one cessation technique is effective for everyone, participants learn a wide variety of evidence-based cessation techniques. Participants address the physical, mental, and social aspects of their addiction.</p> <p>Freedom from Smoking features: *A small group setting that provides peer support and personalized attention *A variety of quit techniques that allow participants to create a quit plan that works for them *An evidence-based approach that increases chances of success *A self-help manual that compliments group sessions.</p>
Full Body Fusion - Group Fitness Class	1	5:15pm - 6:15pm (M)	10/16/2017	12/11/2017	Attend 6 out of 8 classes	25	23	16	<p>Are you looking to improve your overall fitness in a minimum amount of time? Then Full Body Fusion may be for you! Full Body Fusion is an interval training style class that maximizes fun and results. Full Body Fusion will be taught by Kristen Plemons. Kristen is a certified group fitness instructor, and instructs various physical activity programs throughout the Champaign-Urbana community.</p> <p>What is interval training? Interval training is a complete physical activity program. It combines various types of fitness activities in one class. Participants alternate between vigorous activity that increases their heart rate, and muscle strengthening exercises. The result is improvement in a number of fitness areas in less time than in a traditional fitness class.</p> <p>Who is Full Body Fusion for? Full Body Fusion is a strenuous class. It is designed for people who are at least moderately fit, and can exercise at a vigorous level. Participants can work at their own level during the class and make modifications to exercises as necessary, but this may not be the most beneficial option for a beginner. Interval training can carry risks for people with musculoskeletal injuries or heart disease. If you have any of these conditions, please check with your primary care provider before signing up.</p>
Lunchtime Walk	1	12:10pm - 12:55pm (Th)	10/19/2017	12/14/2017	Attend 6 out of 8 sessions	35	22	8	<p>Do you want to get more physical activity, but can't seem to find the time? It just got easier to fit in a walk during your busy day. Sign up for our Lunchtime Walk program. These walks are designed to fit into the average lunch break, allowing enough time to travel to and from the starting point, get a 30-minute walk, and return to your work area. All walks will be outside, weather permitting. In the event of inclement weather, we will walk on the track in the UI Armory.</p>
Mini Stress Relievers	1	12:10pm - 12:55pm (W)	10/18/2017	12/13/2017	Attend 6 out of 8 classes	35	35	16	<p>Need some "me time"? Join our Mini Stress Relievers program! Each week we will feature an easy-to-do stress reduction activity. Examples of activities include: *Coloring *Practicing muscle relaxation techniques *Taking a contemplative walk *Experiencing the power of aromatherapy *And more!</p> <p>You will also have the opportunity to meet other campus employees in a relaxing atmosphere.</p>
Recess for Adults	1	5:15pm - 6:00pm (T)	10/17/2017	12/12/2017	Attend 6 of 8 classes	25	25	10	<p>Recess For Adults is an eight-week program inspired by games typically seen on a playground. This program is perfect for adults to increase their physical activity levels, and to have fun together. A typical class agenda could include, for example, "Red Light, Green Light", "Crazy Kickball", "Blob Tag", and "Group Juggle". This program meets once per week for 45 minutes, for eight weeks. The program will be led by instructor Kerri Schiller, a University of Illinois PhD student in Recreation, Sport, and Tourism.</p>
Intro to Mindful Meditation	2	12:10pm - 12:55pm (T), 5:15pm - 6:15pm (W)	10/17/2017 & 10/18/2017	12/12/2017 & 12/13/2017	Attend 6 out of 8 classes	50	50	24	<p>This beginner-friendly course will introduce the concept of mindful meditation. You will learn how to cultivate tools for mindfulness including breath awareness, visualization, body scan practices, and focus techniques. Each session includes specific mindfulness meditation tips and techniques, a guided meditation session, and time for reflection. By the end of the session, participants will be equipped to integrate mindfulness into their daily lives and maintain their own meditation practice. Participation for all sessions is recommended, but not required.</p> <p>Some benefits of meditation include: -Reduce stress hormones linked to heart disease and immune function -Improve emotional steadiness, gain mental clarity and peace of mind -Build techniques for managing pain, anxiety, and sleeplessness -Enhance brain efficiency and improve concentration and focus -Enhance compassion and improve communication and relationships</p>
Tai Chi	2	5:15pm - 6:15pm (W), 6:30pm - 7:30pm (W)	10/18/2017	12/13/2017	Attend 6 of 8 classes	40	40	17	<p>Introduction to Tai Chi - Core Movements is an eight-week program that aims to improve overall health and wellness through learning basic Tai Chi movements and techniques. All Tai Chi sessions will be taught by Richard Krandel. Richard maintains a certification for Tai Chi from the Tai Chi for Health Institute, and has instructed various programs in the Champaign-Urbana area for the last 7 years. There will be 2 sections of Tai Chi offered this Fall, each with a limited capacity. You may select only one session to attend for the duration of the 8 weeks.</p>
Take Charge of Your Diabetes	1	5:15pm - 7:15pm (Th)	10/19/2017	11/30/2017	Attend 5 out of 6 classes	16	8	5	<p>Diabetes is a chronic and ongoing condition, that many people live with for all of their lives. The good news is that there are ways to manage diabetes, and to prevent or delay serious complications. There is no one way to manage diabetes, and everyone manages slightly differently. In this workshop, you will learn how to use different tools for managing your diabetes, and the instructors will help you to build and carry out a plan that fits your life. This workshop is designed to give you some of the self-management tools needed to take on these tasks, and can help you to be a more active self-manager. This program is a great way to complement any diabetes education that you may be receiving from a medical professional or a registered dietician.</p>
Walktober	1	N/A	10/16/2017	12/3/2017		Unlimited	546	329	<p>Walktober is an online, self-paced wellness activity that encourages participants to take advantage of the beautiful fall weather and walk! The program allows participants to track either their steps or physical activity minutes each day, making progress toward a final goal. As they track their activity, participants will move along a virtual trail, visiting beautiful autumn spots around the world. This program is great for participants of all fitness levels. Whether you are just starting out, or have a well-established physical activity routine, Walktober will help to boost energy and improve health.</p> <p>For user convenience, a mobile application is also available to help with on-the-go activity tracking. Walktober can sync with the following mobile applications, to allow for automatic activity tracking: Fitbit Garmin Connect Movable YOO Apple Health (Note: Apple Health comes standard on most iPhones.)</p>
Weight Watchers	1	N/A	10/16/2017	12/15/2017	Attend at least 6 meetings	Unlimited	20	12	<p>iThrive participants may choose to attend Weight Watchers meetings in the community as their iThrive Wellness Activity for Fall 2017. If you are interested in Weight Watchers, please thoroughly review the information below. Please note that the process and requirements for participating and documenting your attendance in Weight Watchers is different than it was last year.</p>

Lunchtime Walk	1	12:10pm - 12:55pm (Th)	3/1/2018	4/26/2018	Attend 6 out of 8 sessions	30	16	6	Do you want to get more physical activity, but can't seem to find the time? It just got easier to fit in a walk during your busy day. Sign up for our Lunchtime Walk program. These walks are designed to fit into the average lunch break, allowing enough time to travel to and from the starting point, get a 30-minute walk, and return to your work area. The first three walks (on March 1, March 8, and March 15) will be located in the UI Armory, around the indoor track. After Spring Break, we will meet on the Main Quad in front of the Illini Union, and walk outside.
Intro to Mindful Meditation	2	12:10pm - 12:55pm (T), 5:15pm - 6:15pm (W)	2/20/18 & 2/21/2018	4/10/2018 & 4/11/2018	Attend 5 out of 7 classes	50	43	16	<p>This beginner-friendly course will introduce the concept of mindful meditation. You will learn how to cultivate tools for mindfulness including breath awareness, visualization, body scan practices, and focus techniques. Each session includes specific mindfulness meditation tips and techniques, a guided meditation session, and time for reflection. By the end of the session, participants will be equipped to integrate mindfulness into their daily lives and maintain their own meditation practice. Participation for all sessions is recommended, but not required.</p> <p>Some benefits of meditation include:</p> <ul style="list-style-type: none"> -Reduce stress hormones linked to heart disease and immune function -Improve emotional steadiness, gain mental clarity and peace of mind -Build techniques for managing pain, anxiety, and sleeplessness -Enhance brain efficiency and improve concentration and focus -Enhance compassion and improve communication and relationships
Recess for Adults	1	5:15pm - 6:00pm (T)	2/7/2018	4/4/2018	Attend 6 of 8 classes	25	19	4	Recess For Adults is an eight-week program inspired by games typically seen on a playground. This program is perfect for adults to increase their physical activity levels, and to have fun together. A typical class agenda could include, for example, "Red Light, Green Light", "Crazy Kickball", "Blob Tag", and "Group Juggle". This program meets once per week for 45 minutes, for eight weeks. The program will be led by instructor Kerri Schiller, a University of Illinois PhD student in Recreation, Sport, and Tourism.
Tai Chi	1	6:30pm - 7:30pm (Th)	2/22/2018	4/19/2018	Attend 6 of 8 classes	20	15	7	Introduction to Tai Chi - Core Movements is an eight-week program that aims to improve overall health and wellness through learning basic Tai Chi movements and techniques. All Tai Chi sessions will be taught by Richard Krandel. Richard maintains a certification for Tai Chi from the Tai Chi for Health Institute, and has instructed various programs in the Champaign-Urbana area for the last 7 years.
Weight Watchers	1	N/A	1/22/2018	4/9/2018	Attend at least 6 meetings	Unlimited	12	5	iThrive participants may choose to attend Weight Watchers meetings in the community as their iThrive Wellness Activity for Spring 2018. If you are interested in Weight Watchers, please thoroughly review the information below. Please note that the process and requirements for participating and documenting your attendance in Weight Watchers is different than it was last year.
Wellness Potpourri	1	N/A	2/5/2018	4/25/2018	Attend at least 6 activities	Unlimited	29	3	<p>Wellness Potpourri gives iThrive participants the chance to sample unique wellness opportunities all across the UIUC campus during the Spring 2018 semester. Participants will choose various activities from the list below to attend throughout the Spring semester. Participants will be provided with their own "attendance sheet" upon registration.</p> <p>If you attend an in-person activity: Bring your attendance sheet to the approved event, and obtain a signature from an event facilitator. If you attend an online webinar: Write down the name and date of the webinar program on your attendance sheet, and the iThrive staff will verify your attendance with the webinar facilitators. At the end of the semester, the participant will email a copy of the attendance sheet to iThrive Project Manager Lauren Geary.</p> <p>Note: If there is a cost associated with a Wellness Potpourri event, iThrive participants are responsible for that cost.</p>
