

S1 Fig. Cumulative incidence of retinal vein occlusion for individuals among tertiles of pollutant categories: (A) THC and (B) NMHC

The tertile values, in ppm (THC, NMHC), were as follows: THC (T1 level: < 2.28 , T2 level: ≥ 2.28 and < 2.40 , T3 level: ≥ 2.40); NMHC (T1 level: < 0.29 , T2 level: ≥ 0.29 and < 0.36 , T3 level: ≥ 0.36).
