

## Supplementary Data

**SUPPLEMENTARY FIG. S1.** Regional plot of association between 114 SNPs in the *IFNL* locus and the three HCV related phenotypes [viral load  $\log_{10}(\text{PTVL})$ ; green dot]; response to peg-IFN- $\alpha$  and Ribavirin treatment (IFNRB\_SVR; blue dot) and to DAA treatment (DAA\_SVR; purple dot). DAA, direct-acting antiviral; HCV, hepatitis C virus; IFNL, interferon lambda; peg-IFN- $\alpha$ , pegylated interferon alpha; SNP, single nucleotide polymorphism; SVR, sustained virologic response.
