

Table S2. Expected share of mode of delivery and level of fetal complications per screening and management strategy

Strategy	Mode of delivery			Fetal delivery outcome				
	Vaginal	Elective CS	Emergency CS	No comp	RM	SD	Acidosis	Death
Universal US + planned CS	75.7%	7.3%	17.1%	97.025%	0.669%	0.724%	1.070%	0.511%
Universal US + induction	81.7%	0.0%	18.3%	96.678%	0.565%	0.836%	1.420%	0.501%
Universal US + expectant	80.8%	0.0%	19.2%	96.713%	0.592%	0.885%	1.237%	0.573%
Selective US + planned CS	78.2%	4.1%	17.7%	96.934%	0.630%	0.784%	1.121%	0.531%
Selective US + induction	81.7%	0.0%	18.3%	96.691%	0.573%	0.859%	1.353%	0.524%
Selective US + expectant	81.2%	0.0%	18.8%	96.717%	0.588%	0.893%	1.232%	0.571%

US = Ultrasound scan; CS = Caesarean section; No comp = No complications; RM = Respiratory morbidity; SD = Shoulder dystocia; Acidosis = Other acidosis (acidosis unrelated to shoulder dystocia).
