S4 Table. Mean predicted probability of a specific location type being visited throughout illness. Probabilities are predicted for pre-, during, and post-illness time periods, based on logistic GLMMs. For houses, the probabilities are predicted for visiting family member's houses (vs friend's houses) (Table 1).

	Pre-illness (Day 0)	Post-illness (Day 30)	During Illness (Daily)
Education/Work	0.345	0.517	0.243
Health	0.017	0.001	0.316
Other	0.326	0.273	0.255
House	0.304	0.207	0.178
Family's House	0.55	0.46	0.67
