

Supplementary Figure 1. Gating strategy used to isolate CD4⁺CD62L⁻CD44⁺CD69⁺ T cells. Live, single lymphocytes were gated based on size and granularity using FSC and SSC. T cells were determined by CD4 expression. CD62L⁻CD4⁺ cells, were gated on the T cell activation marker CD44. Finally, CD62L⁻CD4⁺ CD44⁺ cells were gated on expression of the tissue homing marker CD69. These data are represented in Fig. 4c.
