Engineering Escherichia coli FAB system using synthetic plant genes for the production of long chain fatty acids.
Elias Kassab¹, Monika Fuchs¹, Martina Haack¹, Norbert Mehlmer¹, Thomas B. Brueck^{1*}.

Table S1: Fatty acid distribution in µg/g DCW of wild type *Escherichia coli* BL21 (DE3) at different time intervals. T=0: directly before induction with IPTG, t=12: 12 hours after induction with IPTG, t=24: 24 hours after induction with IPTG. All fatty acid values are the average of at least three biological replicates with the associated standard deviation indicated.
