

Figure S1. Effect of different concentrations of isosteviol sodium on Iso-induced hypertrophy of cardiomyocytes. The experiment was performed on cardiomyocytes isolated from rats. Concentration-response bar graph. Each bar represents the mean  $\pm$  standard error of the mean (n=5). \*P<0.05 vs. control group; #P<0.05 vs. Iso group. Iso, isoprenaline; STVNa, isosteviol sodium.
