

Supplemental Figure S2. Clustering analyses for successive mappings (left to right) of V5-Als1p on the surface of live cells. On each map, black pixels denote regions where a V5 epitope was detected. Beneath the map is a graph showing the mean adjacency value for the map (orange line) and a histogram of adjacency values for 10^5 simulations. The p value for the measured adjacency is also given for each graph. A) cells expressing Als1p^{WT} B) cells expressing Als1p^{V326N}.
