

Corresponding author(s): instead of author names.

Double-blind peer review submissions: write DBPR and your manuscript number here instead of author names.

# **Reporting Summary**

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see <u>Authors & Referees</u> and the <u>Editorial Policy Checklist</u>.

When statistical analyses are reported, confirm that the following items are present in the relevant location (e.g. figure legend, table legend, main

Statistical	parameters

toxt or Mothads saction)

icht,	text, or inclined section.				
n/a	Confirmed				
	$\square$ The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement				
	An indication of whether measurements were taken from distinct samples or whether the same sample was measured repeatedly				
	The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.				
	🔀 A description of all covariates tested				
$\boxtimes$	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons				
	A full description of the statistics including <u>central tendency</u> (e.g. means) or other basic estimates (e.g. regression coefficient) AND <u>variation</u> (e.g. standard deviation) or associated <u>estimates of uncertainty</u> (e.g. confidence intervals)				
	For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i> ) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>				
$\boxtimes$	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings				
$\boxtimes$	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes				
$\boxtimes$	Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated				
	Clearly defined error bars  State explicitly what error bars represent (e.g. SD, SE, CI)				

Our web collection on <u>statistics for biologists</u> may be useful.

### Software and code

Policy information about <u>availability of computer code</u>

Data collection Not applicable

Data analysis

 $adegenet\ package\ (v2.1.0);\ pheatmap\ package\ (v1.0.8);\ igraph\ package\ (v1.1.2);\ ape\ (v5.1);\ geiger\ (v2.0.6);\ genoplotR\ (v0.8.7);\ epiR\ package\ (v0.9-93);\ Unicycler\ (v0.2.0);\ Prokka\ (v1.12);\ Bandage\ (v0.8.1);\ MUMmer\ (v3.23);\ Artemis\ Comparison\ Tool;\ BLAST\ (v2.3.30).$ 

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors/reviewers upon request. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information.

### Data

Policy information about <u>availability of data</u>

All manuscripts must include a <u>data availability statement</u>. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets

_	s that have associated raw data of any restrictions on data availability				
Accession numbers for the short-read data and associated metadata are listed in Supplementary Table 1. The phenotypic resistance data are provided in Supplementary Tables 3 and 7 and the genotypic resistance profiles are shown in Supplementary Table 4.					
Field-spe	ecific reporting				
Please select the b	est fit for your research. If you are not sure, read the appropriate sections before making your selection.				
Life sciences	Behavioural & social sciences Ecological, evolutionary & environmental sciences				
For a reference copy of	the document with all sections, see <u>nature.com/authors/policies/ReportingSummary-flat.pdf</u>				
Life sciences study design					
All studies must dis	sclose on these points even when the disclosure is negative.				
Sample size	No sample size calculation was performed. As described in the methods section, we used all of the bacterial strains that were available from the original GEMS study				
Data exclusions	As described in the MS, for some analyses we excluded samples where the case/control status of the isolate was unknown.				
Replication	Not applicable				
Randomization	Not applicable				
Blinding	Resistance phenotypes were determined and recorded without knowledge of the genotype. Antibiotic usage data were examined only after all the phenotypes and genotypes related to AMR had been analysed and recorded. All other data were computer-generated and not adjusted.				
Reportin	g for specific materials, systems and methods				
Materials & eyne	erimental systems Methods				

Materials & experimental systems		Methods	
n/a	Involved in the study	n/a	Involved in the study
	☑ Unique biological materials	$\boxtimes$	ChIP-seq
$\boxtimes$	Antibodies	$\boxtimes$	Flow cytometry
$\times$	Eukaryotic cell lines	$\boxtimes$	MRI-based neuroimaging
$\times$	Palaeontology		
$\times$	Animals and other organisms		
	Human research participants		

## Unique biological materials

Policy information about availability of materials

Obtaining unique materials All unique materials are available from the authors.

## Human research participants

Policy information about studies involving human research participants

Population characteristics

The bacteria used in this study were of human origin. The way patients and controls were selected and the way samples were

Hardie Jesearch | Jeporting summing

April 2018

Population characteristics

collected have been described in Kotloff et al. Lancet 382, 209–222 (2013); Panchalingam et al. Clin Infect Dis 55, S294–S302 (2012), and Ingle et al. Nat Microbiol 1, 15010 (2016).
