## Figure S5. Purified NDP52 and N-WASP recombinant proteins for TIRFM.

**a** NDP52-GFP-His and His-RFP-N-WASP proteins were purified from BL21 E. coli, subjected to SDS-PAGE and stained with Coomassie Brilliant Blue. **b** PIP strip assays of purified GST and GST-N-WASP proteins. The phospholipid strip membranes were incubated with GST or GST-N-WASP protein and then probed with anti-GST and secondary antibodies.
