

Supplementary information, Figure S3

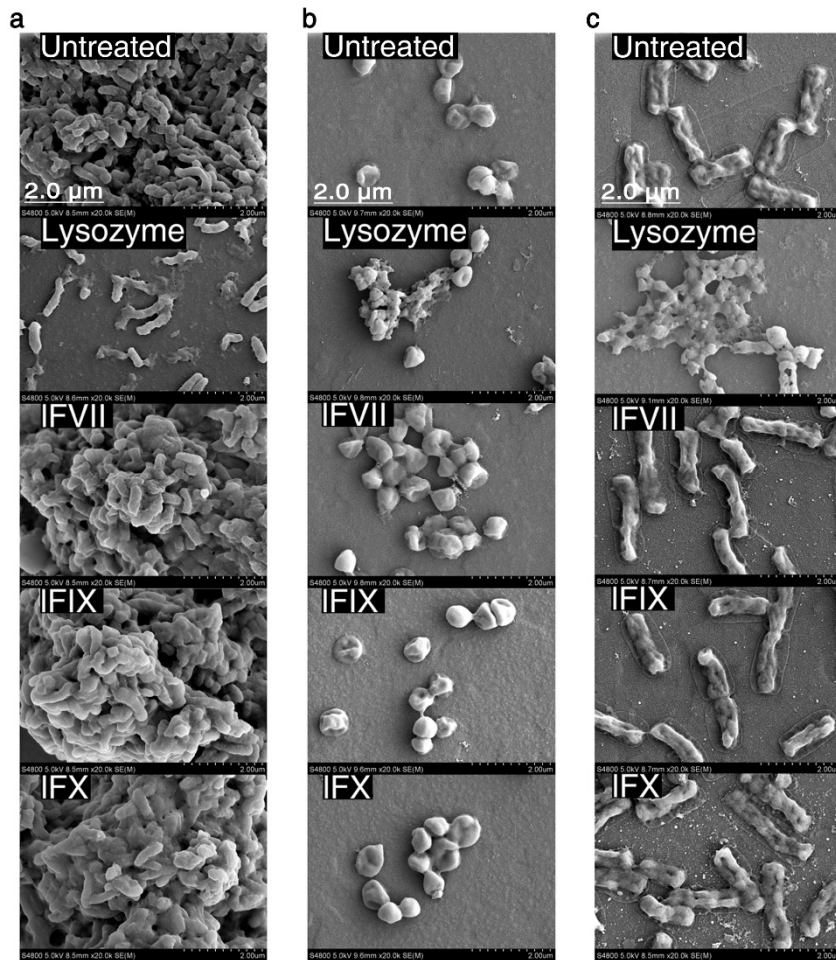

Fig. S3 LCs do not cause the degradation of PGN. PGN of *E. coli* K12 (a), *Staphylococcus aureus* (b) and *Bacillus subtilis* (c) in TBS were incubated for 3 h at 37 °C with the LCs or lysozyme, washed with TBS, and then scanned by SEM. Untreated PGN was included in all experiments. The final concentrations of the LCs and lysozyme are listed as follows: lysozyme, 50 μg/ml; IFVII, 100 μg/ml; IFIX, 100 μg/ml; IFX, 100 μg/ml.
